

- JFK AirTrain Limits of Approach Form - Due to the potential for contact with either moving equipment on the train guide way or with the energized power rail it is the policy of JFK AirTrain Operations and Maintenance that any work within specified limits must be properly authorized. Prior to any work commencing in the vicinity of JFK AirTrain the tenant must determine whether the intended work would be deemed potentially hazardous.

The closer planned work is to the JFK AirTrain Automatic Train Control Territory (ATC), the greater the hazard. Therefore, three limits of approach exist; each limit warranting different precautions and levels of notification. These limits are applicable where train movement or electrical hazards can impact the work to be performed within the limits, or where the work to be performed may effect the operation of JFK AirTrain Systems.

For additional information, contact JFK AirTrain at 1-718-570-1050, Extension 4474.
