SPECIAL FOCUS

## Overseas Visitors Drive Regional Airports' Growth

The Port Authority's three largest airports – John F. Kennedy, LaGuardia and Newark Liberty – have witnessed a sustained expansion in traffic flows over the past 5 years, with passenger volumes growing from 104 million in 2010 to 123 million in 2015. This post-recessionary resurgence has been fueled predominantly by a dramatic growth in international arrivals – visible in the 22 percent growth in international passenger arrivals between 2010 and 2015, while domestic is up 16 percent.

There are two primary sources for international passengers at our airports: outbound travelers from the region or from the rest of the US; and inbound visitors from overseas. A dive into Customs data on international passengers shows that *overseas residents* (from all countries except Canada) have accounted for the lion's share of growth in international volume, particularly at JFK.

A key finding has been an upward spike of 2 million overseas visitor arrivals at JFK between 2010 and 2015 – i.e. a 59 percent growth, compared with 46 percent at the national level. JFK's **9 percent average annual growth in overseas visitors** over this 5-year post-recessionary period is particularly remarkable given constraints such as slot limitations restricting flight movements by the hour. On the other hand, international travel by US residents traveling out of JFK has grown at a 3 percent annual average. Trends for overseas visitor arrivals at Newark are less even and average at a 1 percent annual growth rate for the same period.

(continued on page 2)

Note: Arrivals are assumed to be half of all passenger volumes. Customs data for I-94 arrivals groups JFK and LaGuardia under 'New York', however LaGuardia accounts for only about 1 percent of international arrivals.

## TRANSPORTATION FOCUS

These trends have come in the face of the dollar's strength, which has made US travel increasingly expensive for overseas visitors. However, the largest source of the growth appears to be increasing travel from emerging markets. Data from NYC & Company, the city's tourism arm, shows that China, Mexico, India and Argentina have all registered significant increases in overseas visitor travel to the US over the past 5 years. Overseas visitors from key international markets like Asia grew at an average of 14 percent per year, while Latin America grew at a robust 8 percent. The market shares of these segments also expanded correspondingly.

The International Air Transport Association sees rising living standards, growing population numbers. changing age demographics and declining prices for overseas air travel as key drivers for international passenger growth; these factors appear to have more than offset the dollar's strength in recent years. An increasing in spending prowess in these nations fuels demand for overseas travel, with New York City being the top destination for visitors to the US, 80 percent of whom travel to the region for leisure. As a next step to understanding the patterns of growth, the preferences of domestic US travelers over time could be analyzed as another force to be reckoned with, to help builder a stronger picture of what is driving the region's sustained attractiveness to visitors.
