SPECIAL FOCUS

Exports: A Growth Story!

As the US economy struggles to right itself after the deep recession of 2008-2009, the decline in domestic manufacturing and the transfer of production facilities overseas have received renewed attention. Americans have become accustomed to cheap imports from China and other emerging economies but at the same time bemoan the loss of domestic jobs that presumably is the corollary. While multinational corporations have relocated some production centers to low wage countries, trade originating in the US has also increased substantially over the same timeframe and has contributed to domestic economic growth.

Since 1995, exports destined for the BRIC countries (Brazil, Russia, India and China) have grown very rapidly. According to the World Trade Atlas, over the last sixteen years, total exports in nominal value terms to Russia and Brazil doubled and tripled while exports to India and China grew six and seven-fold, respectively! These trends are mirrored in the pattern for the New York Customs District, as can be seen in the figure below. The trends also clearly show the collapse in trade overall as a result of the recession but also its renewed growth in 2010.

In 2010, the top five export goods by value that went through the New York Customs District were precious stones/metals, machinery, electrical machinery, aircraft, and medical instruments. Among the top 10 export goods from New York, precious stones/metals accounted for 59% of the total US exports (by value) of this commodity; art and antiques accounted for 84%.

The rapid growth in the New York Customs District's exports to China and India is led by growing exports of industrial equipment to support the heavy construction activities in these countries. But the overall growth patterns differ. The share of exports of industrial equipments (by value) to China and India has steadily decreased since 1995 for both countries, but they still account for the largest share of exports to China, while precious stones and metals now account for the largest export through New York to India.

In 1995, machinery, electrical machinery and medical instruments accounted for 77% of the total export value from the New York Customs District to China, while in 2010 they accounted for 40% of the total value. As for India, precious stones and metals accounted for only 10% of the total export value through New York in 1995 but now account for 58%. Much of this increase is undoubtedly due to the rapid increase in prices for these commodities. However, this has meant that machinery and electrical machinery combined now account for only 17% of exports to India through New York, compared to 49% in 1995.

SPECIAL FOCUS

What has been behind the rapid growth in exports to emerging economies such as India and China? Overall, global trade has benefited from a renegotiation of trade agreements and lowering of trade barriers. The dollar has depreciated significantly against other currencies, making US exports more competitive in global comparisons as well. In addition, economic growth in the developing world has been lifting millions out of poverty and into the middle class. While some countries still have a long way to go before per-capita incomes approach European and American levels, the sheer mass of consumers now equipped with the means to make purchases results in a growing demand for our exports.

Geography and long-standing trade relationships have determined some of these regional patterns. For instance, European countries consistently rank among the region's biggest trading partners. But India and China have broken into the Top 10 ranking, and it is likely only a question of time before China will be firmly established not only as the main manufacturer of goods for US consumption but also as the largest purchaser of US exports. Since 2000, the year China joined the World Trade Organization, China has been New York Customs District's leading growth market for exports. In 2003 China broke into the top 10 ranking of export destination countries (by value) from the New York Customs District; by 2010, China had jumped to the No. 2 position behind only the United Kingdom. India entered the top 10 in 2009 as No. 9 and jumped to No. 7 in 2010. In 2010, 9.6% of US exports to China went through the New York Customs District, slightly below the average 10.7% share of US exports to all countries through New York (indicated by the red horizontal line).

When it comes to international trade, much attention is placed on the emergence of China, India and other emerging economies as low cost producers serving a market primarily driven by the appetite of US consumers and businesses. But with the lowering of trade barriers, the optimizing of supply chains, and growing wealth in the emerging economies, these countries will undoubtedly also demand more of what the US produces and eventually balance out some of today's more one-sided patterns.
