SPECIAL FOCUS

The Region's Diverse Population

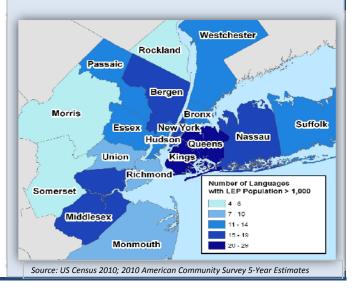

The United States is a country unique in its racial and ethnic diversity; nowhere is this more evident than in the New York-New Jersey metropolitan region. To comply with Federal Title VI requirements, the Planning and Regional Development Department has compiled statistics on diversity in the Port Authority's 18-county region. The report relies on US Census data on ethnicity, race, language, and poverty.

The Census asks individuals about Hispanic or Latino ethnicity, and then asks them to select one or more racial backgrounds. Respondents can therefore choose Hispanic ethnicity and Black/African-American (for example) as race. Nearly one quarter (24 percent) of the region's population identifies as Hispanic. In terms of race, African-Americans account for over 18 percent of the total population, followed by those of Asian descent, at 10 percent.

Racial backgrounds vary significantly across counties. Queens has a higher fraction of Asian respondents than any other county, at 23 percent, with Middlesex a close second at 21 percent. Essex County has the highest concentration of those of African American descent, at almost 41 percent. The Bronx leads the region in Hispanic ethnicity (54 percent), American Indian/Alaska Native (1.3 percent), and Native Hawaiian/Pacific Islander (.09 percent).

The region's diversity is also seen in the number of languages spoken. Eighteen percent of the population over the age of 5 has limited English proficiency (LEP), twice the national level. Over half of that group (53 percent) speaks Spanish, but the region includes speakers of all 39 language choices in the ACS survey – from Chinese and Russian to Navajo and Hmong. Queens alone has 29 different languages or language groups spoken by at least 1,000 speakers. Kings County has 24 such language groups, followed by Nassau with 19 and Middlesex with 16. Spanish is the number one language among limited-English speakers in every county in the region, but the mix of the other top languages varies widely. In Rockland, Yiddish is the second most common language among LEP speakers (25 percent of LEP speakers); in Bergen, Korean is second (22 percent); Nassau and Suffolk have Italian in second (7.4 percent and 4.2 percent respectively); and Hudson has Arabic in second (3.1 percent).

Counties with high levels of ethnic diversity often have high poverty rates, but ethnic diversity also gives the region a competitive advantage by attracting talent from around the world. As a whole , 13.1 percent of the region's population was below the poverty line in 2010, close to the 13.8 percent nationally. Poverty is concentrated in six counties, with 28 percent of the Bronx and 22 percent of Kings living in poverty, and New York, Hudson, Passaic, and Essex counties also above the regional average. Yet diversity does not always coincide with high poverty: Queens, for example, matches the poverty rate for the region. In fact, the region's diversity gives us a leg up in communicating with the rest of the world and may facilitate the conduct of our business around the globe.

TRANSPORTATION FOCUS

FAF³ Snapshot of International Freight, 2010

As a follow-up to February's Transportation Focus, this month we look at the origins and destinations of international cargo flowing through the New York-New Jersey region's marine and air ports, as estimated by the US Department of Transportation's FAF³ model for 2010. FAF³ relies on data from the 2007 Commodity Flow Survey and other sources to develop detailed estimates of annual tonnage and dollar value of freight flows by commodity type, origin, destination, and the transport modes used for the trip. For example, for imports through our port, FAF3 estimates the foreign origin of cargo and the location of the domestic recipient of the goods. For exports leaving through our port, FAF3 estimates the location of the domestic shipper and the foreign destination.

FAF³ estimates that international trade accounts for more than onefifth (22 percent) of all cargo tonnage moved in the 26-county NY-NJ metropolitan region. Import-related activity accounts for about 13 percent of the tons moved, and export-related activity for the remaining 9 percent. Trade through the region's airports accounts for 43 percent by value of imports and 59 percent by value of exports, but its share on a tonnage basis is very small (1 percent of imports and 2 percent of exports). The table below shows the domestic distribution pattern of international maritime freight through the Port of NY & NJ, by share of tons. More than 75 percent of the import flows (by weight) through the Port has a regional destination. In contrast, for export flows using the Port as the exit port, 57 percent originates within the local region. Another 7 percent originates in the Mid-Atlantic states but outside the metropolitan region, 4 percent from New England, 14 percent from other locations east of Mississippi River, and 18 percent from west of the Mississippi.

Share of tons by inland locations	Import	Export
NY/NJ Metropolitan Region	76%	57%
Other Mid-Atlantic (NJ, NY, PA)	4%	7%
New England	3%	4%
Other East of Mississippi River	10%	14%
West of Mississippi River	7%	18%
Total	100%	100%

Several findings and observations can be drawn from this profile. First, nearly 80% of the cargo arriving at the Port of NY & NJ stays in the region. Even though the definition of the region is extensive, i.e. 26 counties, this still speaks to the fact that the share of discretionary cargo is relatively small and that the population concentrated in the metropolitan area is a significant incentive for shippers to bring their cargo here. Second, while waste and scrap remains the largest category of exports from all regions, the data reflects the Port's large (and growing) role as a hub for exports of plastics, machinery, motor vehicles, refined petroleum products, paper products, and other goods from all over the country. Overall, freight flows in the region are the result of regional and global supply lines and it will be interesting to see how changes in the economy and in transportation infrastructure affect those in the years to come.
