**FEDERAL AVIATION ADMINISTRATION**  
**FINDING OF NO SIGNIFICANT IMPACT**

**Location**

John F. Kennedy International Airport (JFK)  
Queens County, New York

**Proposed Federal Action**

The proposed federal action is the approval of a change to the JFK Airport Layout Plan (ALP) for the Aircraft Fuel Tank Installation project.

**Project Description**

The Proposed Action involves the following: installation of two permanent fuel tanks, each 81,240 barrels (3,412,080 gallons) in capacity; two new jet fuel fill and suction lines; connections to existing utilities; a fire protection building with a foam protection system; storm water discharge connection lines and a new storm water lift station; new fencing; a new road segment added to an existing access road outside of the tank security fence on the fence's south side; an extension of the existing Bulk Fuel Farm (BFF) service road on the north side of the tanks, and; a new access driveway south of the tanks.

Two existing hazardous materials storage trailers are proposed to be relocated to a new paved area adjacent to, but outside of the BFF, and these will be served by the new access driveway. The tanks and associated elements, except the aforementioned relocated hazardous material trailers and the new road segment and driveway south of the fence, would be located within the BFF, as the existing boundary of the BFF would be modified to incorporate the location of the two new tanks and associated infrastructure. The tanks would be installed on previously cleared land that has been used in the past for construction staging purposes. Removal of other fuel tanks is not required as part of this project and the fuel farm would be able to operate without interruption during construction of the new tanks.

As part of preparing the project site, the following is required: removal of existing asphalt and pavement; removal of select sections of the fuel farm perimeter fencing and placement of new fencing; relocation of fire foam piping/cabinets; relocation of the existing hazardous material trailers noted above; removal of an existing trench drain and associated storm drain pipes serving the existing parking lot, and; installation of new storm water piping, to be enhanced with a water treatment device, leading to Outfall #5.

**Background**

In 2013, the Port Authority of New York & New Jersey (Port Authority), in collaboration with several airlines, commissioned an analysis of the existing fuel system at JFK. That analysis included recommendations for increasing fuel storage capacity to ensure the reserve fuel capacity is consistent with other large hub airports and industry standards. As part of this evaluation, the Port Authority determined that fuel demand could exceed the airport's current supply capacity during peak consumption periods, and that there is insufficient on-

site storage capacity to sustain projected growth in fuel demand. The report examined the current state of the fuel system and considered several alternatives designed to address the capacity issue, including the addition of storage capability.

### **Purpose and Need**

The purpose and need for the Proposed Action is to achieve adequate storage and reserve capacity of Jet-A fuel in order to meet the current and forecasted demand and ensure an uninterrupted fuel supply for aircraft operating at JFK.

### **Alternatives**

In addition to the Proposed Action, three other alternatives, including No Action were considered.

The No Action alternative involves no improvements to the existing BFF. However, work to keep the fuel farm in safe, working order and in compliance with the permits currently held for its operation would be continued. In 2015, the peak period average fuel uplift flow rate was 4.675M gal/day, which equates to approximately 4.1 days on-site reserve capacity. Per accepted industry practice, this storage capacity is lower than at other airports of comparable size and operations. The No Action alternative does not meet the purpose and need of the project.

Alternative A would repair existing out-of-service tanks and upgrade piping at the BFF. This alternative would include the repair of eight existing tanks and upgrading the associated piping and controls. Repairs would include the installation of a modern, more automated system. Four of these tanks are too small to properly supply the hydrant system; they are used for the storage of off-specification fuel, and are not connected to the fuel delivery pipeline. Due to these characteristics, they are not suitable for jet fuel storage and therefore, the cost to recommission the tanks is not justifiable. Four other tanks, connected to the hydrant system, are temporarily out of service and would require significant investment to bring them into current compliance. The tanks that could be repaired would provide 1.8 million gallons in additional capacity or approximately 0.39 additional days of reserve storage, considering the 2015 peak period demand. This alternative was rejected because it would not increase on-airport storage to the extent needed to meet the purpose and need of the project.

Alternative B would upgrade and automate 52 existing tanks at the BFF. This would implement a plan to maintain the BFF tanks “as is” with upgrades related to modernizing the control system. This includes the installation of automated valves, tank gauges, as well as upgrading the central control center. The alternative would also include the construction of a new hydrant pump pad at BFF. No new tanks would be added as part of this alternative. While these improvements would upgrade the existing system, the controls would be localized, which would still require fuel farm staff to manually work the controls for each tank/valve. The alternative would reduce the operational expenses due to automation; however, this expense reduction was calculated to be minimal and ongoing inspections and testing costs would remain the same. This alternative was also rejected because it would not increase on-airport storage to the extent needed to meet the purpose and need of the project.

Alternative C, the Proposed Action as described above, is the construction of new tanks to add sufficient capacity. The tanks would be constructed at the BFF, as the BFF is the only location for receipt and settling of jet fuel delivered from off-airport locations via underground pipeline. New tanks would be constructed with modern automation and controls and would be connected to the existing distribution system at the BFF. This alternative meets the purpose and need by resulting in an increase of on-airport fuel storage capacity within industry standards.

### **Discussion**

The attached January 2018 Environmental Assessment (EA) addresses the effects of the Proposed Action on the quality of the human and natural environment, and is made a part of this Finding. The Proposed Action would not significantly affect environmental resources as it is being proposed in a developed area with identical land uses (see Section 4 of attached EA). The following impact analysis highlights the more thorough analysis presented in the EA.

### **Air Quality**

JFK Airport is located in Queens County, New York, which is currently designated by the USEPA to be in moderate nonattainment for the 2008 8-hour ozone standard, and a maintenance area for the 2006 Particulate Matter with a diameter of 2.5 microns (PM<sub>2.5</sub>) standard. The Aircraft Fuel Tank Installation project will not cause changes to flight tracks, runway use, fleet mix, or any other factors that could cause increases in aircraft air emissions. The air quality analysis presented in the EA considers the short-term construction and the operational-related air impacts of the Proposed Action as well as the cumulative impacts to air quality as a result of the Proposed Action in combination with other projects ongoing at JFK. The analysis concluded that the Proposed Action would not result in construction and operational-related emissions that equal or exceed applicable *de minimis* threshold rates, nor increase the frequency or severity of any existing violations of the National Ambient Air Quality Standards. The operational and construction-related emissions associated with the Proposed Action are less than the applicable General Conformity Rule *de minimis* thresholds for NO<sub>x</sub> and VOCs. Therefore, these emissions are shown to comply with the State Implementation Plan for compliance with the federal Clean Air Act. Accordingly, no adverse impacts to air quality are expected from implementation of the Proposed Action.

### **Water Quality**

Implementation of the Proposed Action will not result in an increase in impermeable surfaces. The drainage system for the project area would be designed to accommodate surface water runoff. During construction, storm water runoff would be managed through the implementation of a Storm Water Pollution Prevention Plan (SWPPP), which includes Best Management Practices (BMPs) for prevention and/or control of erosion from soil and debris storage piles. The Proposed Action has also been determined by the City of New York and the State of New York to be consistent with Coastal Zone policies and programs (P. 3-17 and Appendix D of EA). No adverse impacts to water quality are

expected as a result of implementation of the Proposed Action.

### **Cumulative Impacts**

The construction schedule of the Preferred Alternative would overlap with the construction of other projects at JFK, including the TWA Flight Center Hotel. With the exception of temporary construction related impacts, the cumulative effects of the Proposed Action are expected to be minimal. The footprint of the proposed project is 4.1 acres, which is a small fraction of the 4,930 acres comprising the airport. As no potentially significant impacts would result from the Proposed Action, it is unlikely that the incremental impact of the Proposed Action would cause or contribute to a significant impact on the environment when added to past, on-going, or reasonably foreseeable future projects or actions.

### **Other Impact Categories**

The impacts of the Proposed Action on noise, air quality, land use compatibility, water quality, DOT Section 4(f), biotic communities, endangered species, coastal zones, floodplains, coastal barriers, prime and unique farmland, energy supply and natural resources, light emissions, solid waste impacts, construction impacts, environmental justice, and cumulative impacts were evaluated in the EA. It is the FAA's finding that the proposed action will not have any significant effect on any of the above noted categories.

### **Public Involvement**

A Notice of Availability of the Draft EA, providing the public an opportunity to review and comment on the Aircraft Fuel Tank Installation project at John F. Kennedy International Airport (JFK) was published in daily papers (*Daily News* (Queens), *Greek National Herald*, *Newsday*, and *Sing Tao Daily*) and weekly papers (*El Especialito*, *Queens Chronicle*, *Queens Courier*, *Queens Gazette*, *Queens Ledger*, *Queens Times Ledger*, and *Queens Tribune*). It was also published on the Airport's website <http://www.panynj.gov/about/studies-reports.html> (Appendix K of the EA). The Draft EA was made available for review from December 8, 2017, to January 8, 2018. No comments were received during the review period.

### **Mitigation Measures**

1. All necessary permits for construction of the proposed action shall be obtained prior to construction.
2. Construction contracts shall contain the provisions of FAA Advisory Circular (AC)150/5370-10A, "Standards for specifying construction of Airports" item P-156, temporary air, water pollution, soil erosion and siltation control and AC 150/5320-5B, "Airport Drainage."

**CONCLUSION AND APPROVAL:**

After careful and thorough consideration of the facts contained herein, the undersigned finds the federal action is consistent with existing national environmental policies and objectives as set forth in Section 101 (a) of the National Environmental Policy Act of 1969 (NEPA) and it will not significantly affect the quality of the human environment or otherwise include any condition requiring consultation pursuant to Section 102(2)(c) of NEPA.

# 1 Purpose and Need

This chapter provides an introduction and describes John F. Kennedy International Airport (JFK), the purpose and need for the proposed project, and the required approvals for its implementation.

---

## 1.1 Introduction

John F. Kennedy International (JFK) Airport is a large-hub commercial service airport located in Queens, New York (New York City) (Figure 1-1 in Appendix A). The Airport is approximately 12 miles southeast of Lower Manhattan. In 2015, JFK served 56,827,154 passengers on 438,897 flights. There are 80 airlines providing domestic and international service at JFK, ranking the Airport as #5 in North America<sup>1</sup> and #15 in the world<sup>2</sup> for passengers. The Airport was also ranked #7 in the nation and #21 in the world for air cargo activity at 1,286,484 tons in 2015.<sup>3</sup>

JFK's current fuel delivery system includes a primary pipeline operated by Buckeye Pipeline, which brings fuel into the Airport's bulk fuel storage facility on the west side of the airport. Previously, Buckeye Pipeline 601 served JFK and LaGuardia Airports, while Buckeye 602 served non-airport related facilities (Exhibit 1-1). However, beginning June 2016, Buckeye 602 also brings jet fuel to JFK during the summer months. The pipelines deliver fuel directly to a Bulk Fuel Facility (BFF) at JFK, which first became operational in the early 1960s.<sup>4</sup> According to the JFK Fueling System Master Plan (Fueling Master Plan), the BFF consists of 62 aboveground storage tanks, however several tanks are out of service. The Airport also has a Satellite Tank Farm (STF), which is located closer to the terminals. The STF consists of 40 aboveground storage tanks. Both the BFF and STF provide a total on-airport storage capacity of 22,080,000 gallons.<sup>5</sup> The STF tanks receive fuel from the BFF via transfer pipelines and eight transfer pumps. Fuel is then distributed from the STF to the passenger terminal through a second set of distribution pipelines and transfer pumps. At each passenger terminal an underground terminal hydrant distribution system distributes the fuel to individual aircraft parking positions at the gates on the terminal ramp. At the gate positions, hydrant trucks ultimately make the final connection to transfer the fuel from the hydrant distribution system to the aircraft.

# THE PORT AUTHORITY OF NEW YORK & NEW JERSEY

## John F. Kennedy International Airport Aircraft Fuel Tank Installation FINAL Environmental Assessment

In 2013, the Port Authority of New York & New Jersey (Port Authority), in collaboration with the airlines, commissioned an analysis of the existing fuel system. That analysis (the Fueling Master Plan) included recommendations for, among other things, increasing fuel storage capacity so that the reserve fuel capacity is in line with other large hub airports and industry standards.<sup>6</sup> As part of this evaluation, the Port Authority determined that fuel demand will exceed the airport's current supply capacity during peak consumption periods by 2016/2017, and that there is insufficient on-site storage capacity to sustain projected growth in fuel demand. The report examined the current state of the fuel system and considered several alternatives designed to address the capacity issue, including developing a State of the Art Concept that would address all of the capacity and design issues with the current JFK fuel farm system.

The State of the Art Concept developed as part of the plan includes the ultimate installation of up to nine new, approximately 80,000 barrel<sup>7</sup> storage tanks at the BFF to meet fuel storage demands and provide adequate reserve capacity at the Airport that would eventually replace the existing, smaller tanks at the BFF. The Master Plan presents data indicating that a total of nine tanks would be needed to meet demand beyond 2020. The installation of tank capacity beyond the two tanks is not currently being considered by the Port Authority or the Airlines because the proposed two tanks would be sufficient to bring JFK's on-airport fuel reserve (5.6 days) in line with that at other large hub airports and in line with the industry minimum reserve standard of five days. To increase fuel storage capacity to industry standards, the Port Authority (Project Sponsor) is proposing to construct two 81,240 barrel fuel tanks. As discussed in Section 1.5, Project Purpose and Need, the appropriate reserve capacity for JFK based on its supply chain, airport size, level of activity and importance to the air transport system, would be at least five days of on-site fuel storage, which is consistent with the data for comparable airports and accepted industry practice (see Table 1-1).

This action will resolve the immediate shortfall of storage capacity during peak demand. The installation of the two 81,240 barrel tanks would occur on already-cleared, previously disturbed land that was used for the storage of construction materials immediately adjacent to the existing BFF, and would not require replacing or removing other tanks (Figure 1-2). Although the project area is not located within the fenced boundary of the existing BFF, as part of this action, the BFF boundary would be modified and a new fence installed to incorporate this area into the BFF. The installation of the two tanks at this location would not require the demolition or relocation of existing airport facilities and would not affect airport operations. Thus, the potential impacts from the construction of the two tanks are relatively minor as the tanks will be constructed on land that is currently vacant.

The proposed two tanks, each with the capacity to hold approximately 3.4 million gallons, would provide approximately 1.5 additional days of fuel storage capacity on-airport. The proposed additional fuel storage capacity brings the level of JFK's fuel reserve capacity in line with that at other major hub airports and accepted industry practice. PANYNJ's analysis of fuel management, including additional fuel storage capacity and efficiency enhancements, is on-going. There are no current plans or initiatives for the installation of any additional storage tanks beyond the two tanks described in this Environmental Assessment (EA). If the Port

<sup>6</sup> Pond & Company. JFK Fueling System Master Plan 2013 – Final. Prepared on behalf of the Port Authority of New York and New Jersey. November 2013. The Port Authority reviewed the Fueling Master Plan but, at this time, there is no plan or funding identified for full implementation. Similarly, the Airlines reviewed the Master Plan and have no plans or funding identified for implementation of the Master Plan beyond the current project.

<sup>7</sup> One barrel is equivalent to 42 gallons.

# THE PORT AUTHORITY OF NEW YORK & NEW JERSEY

## John F. Kennedy International Airport Aircraft Fuel Tank Installation FINAL Environmental Assessment

Authority were to pursue further enhancements/improvements to JFK's fuel system, such work would require additional planning, engineering and environmental analysis.

The two aboveground fuel storage tanks would be constructed and installed in accordance with state and local construction and permitting requirements and standards as well as the Port Authority's Tenant Construction and Alteration Process Manual,<sup>8</sup> American Petroleum Institute (API) Standard 650, Welded Tanks for Oil Storage, and National Fire Protection Association (NFPA) 30, Flammable and Combustible Liquids Code.<sup>9</sup>

The Federal action identified for this project is the approval by the FAA of a change to the Airport Layout Plan (ALP).<sup>10</sup> Therefore, this project is submitted for review under the National Environmental Policy Act (NEPA). As a requirement of NEPA, Federal agencies must analyze and disclose the potential environmental impacts associated with a project, including any mitigation measures, which will be reviewed and considered by the appropriate regulatory agencies and interested parties.

This EA has been prepared to describe and assess the consequences that may result from the implementation of the Proposed Action. This document discloses the direct, indirect, and cumulative impacts that may result from the implementation of this Proposed Action. This analysis is conducted in compliance with NEPA requirements, the Council on Environmental Quality (CEQ) guidance, 40 Code of Federal Regulations (CFR) 1500 - 1508, and FAA Orders 5050.4B, *NEPA Implementing Instructions for Airport Actions* and 1050.1F, *Environmental Impacts: Policies and Procedures*.

---

## 1.2 Organization of Chapters

The EA is organized as follows:

- Chapter 1 – Purpose and Need
- Chapter 2 – Alternatives Analysis
- Chapter 3 – Affected Environment
- Chapter 4 – Environmental Consequences
- Chapter 5 – Public Involvement
- Chapter 6 – List of Preparers
- References
- Appendices

---

## **1.3 Background**

The Port Authority operates JFK, one of five airports in its system.<sup>11</sup> The Airport is home to over 80 commercial air carriers serving 100 international non-stop destinations. The JFK Airport property is 4,930 acres in size and has more than 30 miles of roadway. It is located adjacent to Jamaica Bay in the southeastern section of Queens County, New York (Figure 1-1).

In April 1942, New York City (NYC) began filling the marsh tidelands of Idlewild Golf Course for the construction of the airport.<sup>12</sup> Initial construction was completed in 1947. The Port Authority assumed management and operation of the airport from the City in June 1947. Commercial passenger operations were initiated in 1948. On December 24, 1963, the airport was renamed John F. Kennedy International Airport in memory of the former President.

The runway system at JFK is comprised of four runways that are arranged in a dual parallel orientation: Runway 04R/22L, Runway 04L/22R, Runway 13R/31L, and Runway 13L/31R. JFK has six operating airline terminals, surrounded by a dual ring of peripheral taxiways, with over 125 aircraft gates.<sup>13</sup> The terminal buildings are located in an 880-acre parcel between Runways 13L-31R & 13R-31L called the Central Terminal Area (CTA), which is served by both the JFK Expressway and Van Wyck Expressway. Terminals 1, 4, 5, 7, and 8 have Customs and Border Protection (CBP) services for arriving international passengers.

Supply of Jet A fuel to passenger and cargo aircraft at JFK is limited to the quantities stored in tanks at the BFF and STF. Fuel to the BFF is primarily delivered via a supply pipeline owned and operated by Buckeye Pipeline. The STF is supplied by fuel transfer lines from the BFF. From 2004 through 2012, fuel demand peaked in 2007 and 2008 at JFK due to expiration of flight restrictions (High Density Rule), prior to the FAA implementing slot restrictions at the end of 2007/2008 (demand dropped after slot restrictions, but subsequently has increased).<sup>14</sup> Accommodating increasing demand for fuel with the existing JFK fueling infrastructure is a challenge. A major portion of the infrastructure for aircraft fueling at JFK is more than 50 years old and employs mostly manual technology as opposed to automated systems that are prevalent on modern fueling systems. For example, most of the fuel transfer operations are manual, with operators required to manually control valves and pumps to start and stop fuel flow, directing the product to the intended tank. Although automatic tank gauging systems are scheduled to be installed, currently all tank gauging is performed manually. Currently there is no official project to install a new gauging system at the BFF or STF.

At the BFF, certain tanks do not contribute to the fuel reserve quantity available to the airport's terminals (Exhibit 1-2). Tanks 21, 22, 29, 30, 31, and 32 do not supply the hydrant system and do not contribute to the fuel reserve quantity. Tanks 24, 26, 27, and 28 are temporarily out of service and would require significant investment to bring them back into service. As a result, the storage capacity of these fuel farms available to the terminal hydrant system is less than all the tanks currently at the BFF and STF.

---

11 Aside from JFK, the Port Authority maintains and operates LaGuardia Airport, Stewart International Airport, Newark Liberty International Airport, and Teterboro Airport.

12 <http://www.panynj.gov/airports/jfk-about.html>. Accessed March 7, 2016.

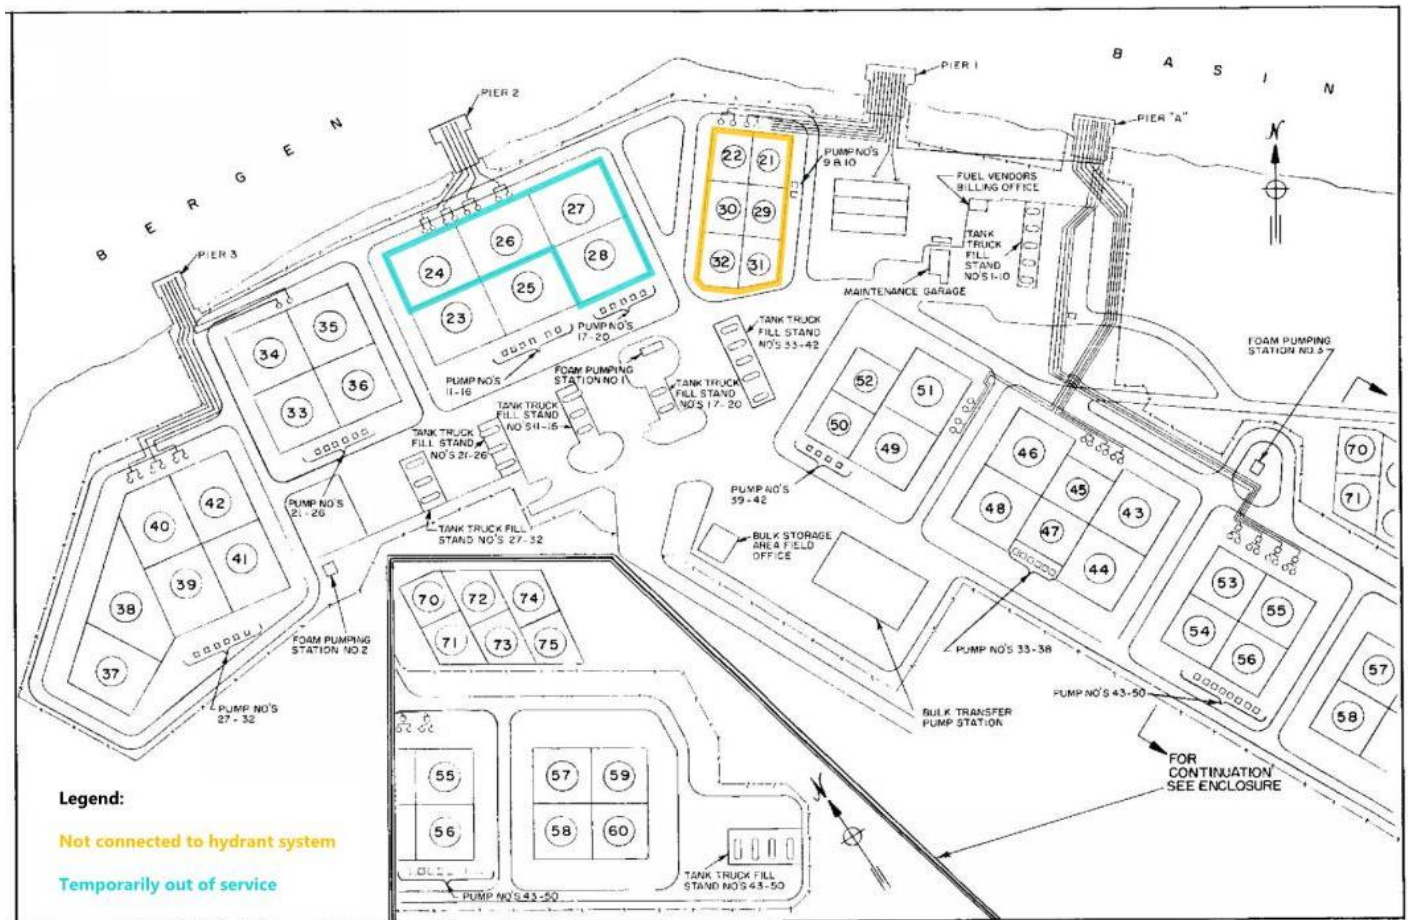

13 <http://www.panynj.gov/airports/jfk-airport-map.html>. Accessed March 7, 2016.

14 In 2008, the FAA issued an FAA Order that reduced the volume of scheduled operations to approximately 81 per hour from 6:00 AM to 10:59 PM. Existing slot limits for JFK are 81 scheduled operations per hour & 2 unscheduled operations per hour (daily 6:00 AM to 10:59PM).

John F. Kennedy International Airport  
Aircraft Fuel Tank Installation  
FINAL Environmental Assessment

Exhibit 1-2: JFK Fuel Farm Referenced Tanks

Source: JFK Operations and Maintenance Manual, Figure 2 "Plot Plan – Bulk Fuel Storage Area JFK International Airport."

In recognition of the capacity issues of the existing fuel farm system and the need to plan for modernization of aging infrastructure, the Port Authority commissioned a master plan study to identify facility improvements that would modernize the JFK fuel farm system and accomplish the following: integrate existing and alternative systems for adequate storage and distribution of fuel to aircraft; develop systems to optimize operations and maintenance; and evaluate alternative delivery options to ensure supply meets projected fuel demand. The Fueling Master Plan found that fuel demand will exceed supply capacity during peak periods by 2016/2017, there is insufficient on-site storage capacity to sustain the current projected growth in fuel demand, the age of infrastructure creates higher than normal maintenance and repair costs, and that the current system of delivering fuel to air cargo ramps is inefficient.

The Fueling Master Plan also identified the optimum amount of storage capacity for JFK. This was determined using the following factors: anticipated growth in demand, capacity of the supply chain, fluctuations in airport operations, fuel quality assurance risks, and regulatory requirements. The peak demand requirements were

determined as the best measure for establishing the appropriate capacity of storage, as the Airport will require enough capacity on-site to build up a reserve inventory in advance of the peak period, which is June through August for JFK. In addition, Fueling Master Plan recommendations included developing a minimum of five days of on-site reserve storage capacity, similar to other large-hub airports.

The Fueling Master Plan results identified several key short comings with the existing fuel farm storage and distribution system:

- The projected fuel demand will exceed the current supply capabilities during peak summer periods by the years 2016/2017. As of the Summer of 2016, the supply met the demand.<sup>15</sup>
- The current on-site storage capacity is not able to sustain the projected growth in fuel demand. By 2020, the on-site capacity will fall below five days of reserve during the peak season. In fact, the analysis determined that JFK only has, on average, a maximum of four days of total reserve storage during the non-peak season.
- The existing fuel infrastructure is overly complex resulting in higher operational costs above the typical fuel facility that handles a similar volume (more than three times the cost).
- The age of the system creates higher than normal maintenance and repair costs on an annual basis (more than double that of Chicago O'Hare International Airport (ORD) or Los Angeles International Airport (LAX)).

---

## **1.4 Description of the Proposed Action**

This project consists of the installation of two permanent fuel tanks, each 81,240 barrels (bbls)<sup>16</sup> (3,412,080 gallons) in capacity, two new jet fuel fill and suction lines, connections to existing utilities, a fire foam protection system including a fire protection building, stormwater discharge connection lines and a new stormwater lift station, new fencing, a new road segment added to an existing access road outside of the tank security fence on the fence's south side, an extension of the existing BFF service road on the northside of the tanks to serve the tanks, and a new access driveway also south of the tanks. Two existing hazardous materials trailers will be relocated to a new paved area adjacent to but outside of the BFF and these will be served by the new access driveway. The tanks and associated elements, except the forementioned relocated hazardous material trailers and the new road segment and driveway south of the fence, would be located within the BFF, as the existing boundary of the BFF would be modified to incorporate the location of the two new tanks and associated infrastructure. The tanks would be installed on previously cleared land that has been used in the past for construction staging purposes. Removal of other fuel tanks is not required as part of this project and the fuel farm would be able to operate during construction of the new tanks without interruption.

As part of preparing the project site, the following is required: removal of existing asphalt and pavement, removal of select sections of the fuel farm perimeter fencing and placement of new fencing, relocation of fire foam

## John F. Kennedy International Airport Aircraft Fuel Tank Installation FINAL Environmental Assessment

pipework/cabinets, relocation of the existing hazardous material trailers noted above, removal of an existing trench drain and associated storm drain pipes serving the existing parking lot, and installation of new stormwater piping leading to Outfall #5, which will be enhanced with a water treatment device.

To obtain authorization to discharge stormwater from any land disturbance within JFK Airport, a Stormwater Pollution Prevention Plan (SWPPP) and Notice of Intent (NOI) must be submitted and approved by the Port Authority and NYSDEC. All work must be done in accordance with State Pollutant Discharge Elimination System (SPDES) Permit # NY-0008109 Special Conditions 4B and JFK Best Management Practices (BMP) Plan, BMP7. The stormwater runoff from within the new tank containment areas will be routed to the Outfall #4 BFF stormwater treatment facility in compliance with the existing SPDES Permit. The discharge will be regulated via a new lift station and valve.

The area outside the tank containments will be treated in accordance with NYSDEC standards. Water quality controls for this SWPPP have been sized following the criteria of Chapter 9.2.1.; guideline B.III, which requires stormwater management practices (SMPs) to be sized to treat 75% of the water quality volume. Stormwater discharge will be treated with a Continuous Deflective Separator (CDS) Stormwater Treatment Device as manufactured by Contech Engineered Solutions, or approved equal. Further discussions of the stormwater discharge is presented below.

Four construction-related project elements also are included in the project. These are two temporary work spaces, an access driveway, the use of an existing road as a temporary haul road, and closing of monitoring wells.

Each component of the proposed action is described below and displayed in Figures 1-2 through 1-12.

- **Tanks.** Two tanks, designated Tank 1 and Tank 2, would be constructed. Tank 1 is on the west side and Tank 2 is on the east of the project site (Figures 1-2). Both tanks would be constructed of steel with a single wall surrounded by a steel containment dike and a 35-foot separation between the containments. The two tanks would be accessible within their containments by stairs rising over the containment walls. To facilitate operations, both tanks would be accessible from the stairs between the containments via a common tank-to-tank catwalk. The tanks would have the following dimensions and characteristics:
  - Each tank would be 48 feet in height with a diameter of 110 feet (Figures 1-5, 1-6).
  - The tank foundations would be constructed of reinforced concrete. Each foundation consists of an approximate 113-foot diameter, 4-foot 4-inch thick thick ringwall foundation atop a 113-foot diameter, 3-foot thick mat foundation. Each tank would be constructed on an area of approximately 31,420 square feet.
  - Approximately 60-foot long concrete filled pipe pile footings would support the structure, installed on approximately 6-foot centers as part of its foundation.
  - There would be a steel walled containment surrounding each tank, 16 feet in height with a diameter of 200 feet. The containment area for each tank would have a minimum volume capacity of 110 percent of the tank's capacity in compliance with New York State Department of Environmental Conservation requirements. The containment area would be lined with an impervious high density polyethylene (HDPE) liner, installed in compliance with its manufacturer's requirements. An

approximately 45-foot area would separate the containment wall from and the concrete foundation of the fuel tank.

- A flexible membrane liner (FML) would be provided under the new storage tanks to contain any leaks in the tank floor. The FML would be attached to the tank's ring wall foundation. Sand bedding material and an impressed cathodic protection system would be provided above the liner to protect the tank bottom from corrosion. Leak detection pipes would be provided to monitor the space between the tank bottom and the liner for leaks.
- Each tank bottom would be sloped inward to the tank sump (Figures 1-6, 1-7, and 1-8 ). The sump in each tank would drain by gravity to a 2-inch diameter polyvinyl chloride (PVC) pipe for the discharge of water and settled particulates to a sump separator. The sump separator, located in the tank's containment area, would separate sumped fuel from any water or contaminants. Then, the separated fuel would be returned to the tank. Water and particulates would be directed to the stormwater inlet within the containment that would eventually drain into the Port Authority's existing stormwater drainage system and water treatment system. No stormwater from inside the containment walls would be directly discharged to Bergen Basin or any other water body.
- Water for hydrostatic testing of the tanks will come from the closest low or high pressure Port Authority (PA) fire hydrant after coordination with the PA. The water used to test the first tank will be transferred by portable pump to the second tank for hydrostatic testing of that tank. Prior to hydrostatic testing the tank interiors will be manually cleaned to remove incidental dirt from the construction of the tanks. Hydrostatic testing will be performed prior to any fuel being introduced into the tanks. It is anticipated that when hydrostatic testing is completed, the water will be free of any hydrocarbons. It is proposed that the hydrostatic test water be disposed of by means of Outfall #5 that will also discharge the sites' stormwater from outside the tank containments.
- Stairwells would be mounted on the interior/exterior of the containment walls of each tank, and also on the exterior wall of the fuel tank for access to the tank roof.
- Painting the tanks (both internally and externally) is called for in the project plans. The specification page for the tank coatings is presented in Appendix H.<sup>17</sup>
- **Foundation and Pilings.** The tanks would be constructed on an approximately 4.5-foot high ring wall curb that would be constructed on top of the approximately 3-foot thick reinforced concrete mat foundation that would be constructed on top the approximately 60-foot long pile footings installed on approximately 6-foot centers. The steel containment wall would be installed on a reinforced concrete ring wall footing approximately 5 feet thick. The containment area would have a liner 60-mil<sup>18</sup> thick composed of HDPE, protected on either side by geotextile fabric and installed over 4 inches of sand bedding, over 6 inches of compacted subgrade. The surface of the lined containment would be 4 inches of aggregate.

---

<sup>17</sup> Argus. 2017 (January 20). John F. Kennedy International Airport, BFF Jet Fuel Storage Tanks Nos. 1 and 2 Specification Section 09 97 13.00, Entitled "Fuel System Coatings," Issued for TAA Review. Argus Project No. 15017.00.

<sup>18</sup> 1 mil = 0.001 inches

- **Lighting.** A light emitting diode (LED) fixture atop a light pole would be installed at the top landing of the stairs leading to each tank roof for the safety of operators. Additional LED fixtures atop poles would be installed within the project area atop reinforced concrete foundations not to exceed 3 feet in diameter and 5 feet in depth. The location and intensity of the LED fixtures would be determined based on minimum industry standards to support operations and safety. The fixtures would be downward facing to avoid conflicts with aircraft operations.
- **Fire Protection (Fire Protection Building, Fire Foam Line, and Fire Hydrant).** The fire protection building, located southwest of Tank 1, would be approximately 512 square feet in size. The building's 12-inch thick concrete slab, measuring approximately 660 square feet in size, will rest on compacted sub-grade with footings (2 feet wide by 3 ½ feet deep) extending into the ground (Figure 1-10). Fire foam lines would originate in the fire protection building and extend across the project site to provide firefighting foam to the tank interiors and containment areas of both tanks. Water would be provided to the new fire protection building from the existing 16-inch diameter main pipe located near the northwest corner of the building. In addition, water would be provided to the building for the fire foam system, and a fire hydrant would be constructed adjacent to the fire protection building.

The existing fire foam piping and cabinets will be modified/relocated after the demolition of the portion of the parking lot to be used for this project to minimize the time that the fire foam system will be unavailable. The fire foam system will be restored to service prior to the tanks beginning operation. If needed, during the modifications/relocations, temporary fire protection of the parking lot will be coordinated with Aircraft Rescue Firefighting (ARFF) and the JFK Fire Marshall.

- **Fuel Tie-in and Piping.** The existing jet fuel fill and suction systems would be extended to serve the new tanks as indicated on Figures 1-2. Dependent on site conditions, the suction piping trenches would either be constructed straight-sided using trench boxes or benched (sloped) in accordance with Occupational Safety & Health Administration (OSHA) regulation. These pipes would be buried at or below an average depth of 4 feet below finished grade (Figure 1-11 and 1-12). The jet fuel fill lines, however, will be embedded under the existing fuel farm access road using a horizontal direction drill (HDD). The fuel line ingress and receipt pits are shown on Figure 1-4. The ingress pit will measure 20 by 20 feet and the receipt pit will measure 20 by 30 feet. The depth of both pits will be determined after the depths of the existing fuel lines and other utilities are determined. The existing lines will remain in place. At a minimum, the new line will be placed 12 inches below the lowest utility line. Beginning at the ingress pit, the 18-inch diameter jet fill line will slope downward from an elevation of approximately 6 feet below existing grade at project Station 1+00 to its end at project Station 6+00 (approximately 11 feet below existing grade). The resultant HDD soils will be treated the same as other excavated materials, with any fuel saturated soils segregated and disposed of in accordance with New York State Department of Environmental Conservation (NYSDEC) regulations.
- **Utilities (Lines, Duct Bank, Panel, and Building).** The tanks and associated infrastructure would require access to water, electrical power, and communications. Utility connections would be made to existing services already serving the existing BFF. Dependent on site conditions, the line and duct bank trenches would either be constructed straight-sided, using trench boxes, or benched (sloped) in accordance with OSHA regulations. Pipe and the electrical duct bank would be buried at or below an average depth of 4

feet below finished grade. As part of the project site preparation, relocating the existing fire foam piping and cabinets that are along the existing parking lot fence line would be required. This action is described in further detail above in the Fire Protection bullet.

Firefighting water lines would be constructed along the new roadway to support the installation of tank cooling monitors to protect one tank from another, in the event of a fire. A new north-south water line would be connected to the existing east-west water line south of the access roadway. This would provide water to the new fire water line for firefighting.

Electrical service to the new tanks would be brought to a new electrical rack and panel, located northeast of Tank 2 on a 192-square foot concrete pad. The electrical panel would be serviced by a new electrical feeder from an existing electrical motor control center (MCC) in Building 242 located east of the new tanks. Underground conduit would be used to enter the building, however, if required, aboveground conduit would be used to penetrate the side of the building. One electrical duct bank is proposed to Building 242, originating in a conduit trench located immediately east of the new electrical panel northeast of Tank 2. The electrical duct bank would have its alignment directed to the south, for approximately 100 feet, to an electrical pull box. At that point, one electrical duct bank (EDB 1) would be aligned, for approximately 360 feet, from there to Building 242. The other electrical duct bank (EDB 2) would continue south approximately 65 feet before the alignment changes to southwest and then west for approximately 520 feet long to a point of intersection with new proposed fire protection building (located off the southwest corner of Tank 1).

- **Fiber Optic Communications.** A new fiber optic communications duct bank would extend from the proposed east-west electrical duct bank line (EDB 1), and connect to an existing communications duct bank at the tie-in point indicated in Figure 1-2. The communications fiber would then be extended from the tie-in point in an existing communications duct bank to the existing BFF operations trailer.
- **Stormwater Discharge.** The stormwater/containment discharge system would drain stormwater from the tank roofs and the tank containments. The tank roofs would drain into their respective containment areas. Stormwater collected within the containment areas would be retained within the containment area until the post indicator valve on the stormwater drain line from the containment area is opened to release the stormwater collected within the containment to the existing Port Authority storm drainage system serving the BFF. The release of stormwater from the tank containment areas would occur after a storm event, and be coordinated with the release of stormwater from the existing tank containment areas. After release to the Port Authority's stormwater drainage system, stormwater from these tank containments would flow to the Port Authority's existing storm water treatment system. The existing stormwater treatment system has adequate capacity to handle additional volumes of stormwater from the project.

Stormwater within the tank containment areas and from the extended asphalt service road on the north side of the site will be directed to the existing BFF stormwater treatment facility located near Outfall #4 (Figure 1-3). Runoff from the extended asphalt service road will be directed to an existing storm inlet on the existing portion of the BFF service road which drains to the existing treatment facility. Stormwater in the containment areas will gravity flow into the new lift station that will pump the stormwater to an existing manhole that drains to the treatment facility.

The 8-inch discharge line under the containment area for the tanks would be installed below the containment liner at a depth not to exceed 12 feet. The plan directs storm/CD via 8-inch pipes from the tanks directly north for a distance of approximately 100 feet (Figure 1-3). At that point, the discharge line turns west and then north to an existing manhole in the BFF stormwater system.

The Port Authority's stormwater system exists at shallow depths. Based on the final elevation of the containment areas and the elevation of the connection point to the Port Authority stormwater system, a new stormwater lift station will be provided to pump the storm water from the containment areas to the existing Port Authority stormwater system. The location for a new station is shown on Figure 1-3 on the proposed storm/CD line on the northwest side of the project site. All stormwater will be treated, sampled, and discharged in accordance with the airport's State Pollutant Discharge Elimination System (SPDES) Permit.

All stormwater outside the tank containments, except stormwater from the existing and proposed re-aligned service access road located south of the two tanks, would discharge through pervious surfaces that would be stone-covered, which is consistent with the current stormwater drainage operations at the BFF. Stormwater discharge from the existing and proposed realigned access road south of the two tanks would be collected by two new stormwater drains (catch basins) located on the north side of the new south access road segment. The roadway stormwater will be routed to an existing Port Authority stormdrain pipe for discharge at Outfall #5 (Figure 1-3). Before entering the outfall, the stormwater will be treated using a Contech CDS2015-4-C treatment device.<sup>19</sup> The stormwater discharge to Outfall #5 is permitted under the airport's State Pollutant Discharge Elimination System (SPDES) Permit (September 27, 2007).<sup>20</sup>

- **Security Fence.** A security fence would be constructed around the new tanks and associated building and infrastructure, and subsumed into the BFF. The fence would be composed of 3-strand barbed wire atop a 8-foot chainlink fence atop a 32-inch aboveground concrete "Jersey" type barrier. The barrier extends 9 inches into the ground atop a 6-inch crushed stone base. The new fence section around the tanks would connect with existing BFF fencing on the east and north sides of the new tank area expanding the BFF perimeter. Where the security fence provided under this project transitions to the existing BFF security fence, fence posts would be on 10-foot centers, and they would be set at an average of four feet deep below final grade.
- **Sidewalks.** Three sidewalks would be constructed in the tank area (see Figures 1-3, 1-10). The sidewalks would be located southwest of Tank 1, on the east side of Tank 1, on the east side of Tank 2, and northwest of Tank 2. The westernmost sidewalk is oriented north-south, and spans the length of the area between the existing access road, the fire protection building, and the west side of Tank 1 (103 feet in length). The second sidewalk is oriented north-south and spans the length between the existing access road and the new containment stairs on the east side of Tank 1 (105 feet in length). The third sidewalk is adjacent to the east side of Tank 2 (41 feet in length). The fourth sidewalk, situated northeast of Tank 2, provides access to the new electrical equipment pad. This is the shortest of the three

<sup>19</sup> Anonymous. n.d. Contech Engineered Solutions, LLC, CDS2015-4-C Inline CDS Standard Detail cut sheet.

<sup>20</sup> Stephen Watts III. 2007. SPDES Permit, JFK, to Matthew Masters (PANYNJ), dated September 27, 2007.

sidewalks (28 feet in length). All of the sidewalks are 4 feet wide and each would be constructed on 6-inch thick compacted subgrade material underlying 4-inch thick concrete slab sections.

- **Access Road - South.** A new, re-aligned segment of the existing service access road would be constructed, connecting to the existing BFF service road to the south of the tanks and the existing parking lot to the northeast of Tank 2. The new access road segment would be approximately 490 feet long and 31 feet wide. Construction of the new road section would require excavations to a depth of 20 inches below grade. From bottom to top, the road would be composed of an 8-inch thick layers of compacted subgrade and 6-inch thick layers of aggregate base and asphalt pavement (Figure 1-12). The access road would be gated at the western and northeast perimeter of the project site.
- **Access Road - North.** The existing service access road would be extended to access the northside of the tanks. The extended road segment would be approximately 490 feet long and 31 feet wide. Construction of the new road section would require excavations to a depth of 20 inches below grade. From bottom to top, the road would be composed of an 8-inch thick layers of compacted subgrade and 6-inch thick layers of aggregate base and asphalt pavement (Figure 1-12). The access road would be gated at the western and northeast perimeter of the project site.
- **Hazardous Material Trailer and Asbestos Containing Material (ACM) Trailer Removal and Relocation.** The existing hazardous material trailer and an asbestos containing material (ACM) trailer located southwest of the proposed location of Tank 1, used for the temporary storage of these materials prior to final off-site disposal, will both be relocated to the south and west of their present locations (Figure 1-3). Both of the trailers will be moved to the southeast of existing Remediation Building 289 on newly prepared surfaces. The trailers will be emptied by the Port Authority prior to their relocation and the Port Authority will manage the disposition of the removed material. The existing pavement under the trailers will be removed. The new trailer locations will be graded and new pavement laid down. The depth of disturbance resulting from the preparation and laydown of the new surfaces will be approximately 20 inches below existing grade.

Four construction-related project elements also are included in the project. These are two temporary work spaces, an access driveway, the use of an existing road as a temporary haul road, and monitoring well closures. These are shown on Figures 1-2 and 1-4.

- **Temporary Work Spaces.** Two temporary work spaces are defined for contractor use during the construction and post-construction phases of the project (Figure 1-2). The larger of the two areas is northwest of the two tanks. The smaller is northeast of Tank 2, bound by the re-aligned service access road, the existing BFF fence line, and the temporary haul road
- **Temporary Existing Haul Road Use with New Gating.** An existing haul road extends southwest from Commissary Road (Figure 1-2) to the existing BFF service road. The haul road will be used during the construction and post-construction phases of the project. The only enhancement to the road will be a new gate at the road's point of intersection with the existing fence.
- **Access Driveway.** A short access driveway will be constructed southwest of the tank area in order to facilitate movement between a local service road near building B209 and the existing BFF service road.

The driveway will be paved and measure approximately 12 by 18 feet. The depth of disturbance resulting from site preparation and pavement will be approximately 20 inches below existing grade.

- **Monitoring Well Closure.** A segment of the existing trench well system located on the southwest side of the tank area will be decommissioned. Twelve monitoring wells and approximately 570 feet of associated drain piping will be removed. The contractor will decommission and remove the existing system as specified by the New York State Department of Environmental Conservation and any additional applicable state and local codes.<sup>21</sup> The NYSDEC approved the removal of the wells and associated piping because the wells and piping was no longer needed (Appendix I).

Both tanks will be constructed simultaneously with infrastructure tie-ins being coordinated with the Port Authority and Allied Aviation. The existing staging area adjacent to the site will be used with no modification.

---

## 1.5 Project Purpose and Need

*The purpose of the project is the construction of additional on-site jet fuel storage at JFK to achieve adequate storage and reserve capacity in order to meet current and forecasted demand and ensure an uninterrupted fuel supply for aircraft operating at JFK.*

While the Fueling Master Plan envisioned a complete refurbishment of the fuel storage system as well as securing additional fuel supply, this project's purpose is to fulfill the need for on-site jet fuel storage that would bring the fuel reserve capacity in line with industry standards. The current maximum fuel storage capacity at JFK is lower than optimum for an airport of this size and importance. The total useable capacity on-site for both the BFF and the STF is approximately 23,200,000 gallons. Based upon the average fuel usage during the 2014 peak period, with a daily issuance of approximately 4.49 million gallons,<sup>22</sup> this equates to approximately 5.2 days of storage capacity on site.<sup>23</sup>

Because the above usable capacity estimate includes the tank capacity of the STF, it over states the effective storage capacity of JFK. The STF buffers the capacity of the transfer and distribution systems and does not provide fuel storage or settling. Instead, it functions as part of the fuel distribution system with the 40 tanks at the STF serving as temporary holding tanks buffering the flow of fuel between the 7,500 gallons per minute (gpm) capacity BFF transfer pumps and the 45,000 gpm capacity pumps of the terminal distribution systems. Due to the fuel flow demand, the STF tanks are filled and emptied on a daily basis. Therefore, the STF does not provide all of the functions of a storage facility and the 4 million gallons of fuel storage capacity at the STF does not effectively contribute to the calculated on-site storage value of 23,200,000 gallons (5.2 days).<sup>24</sup> By removing those tanks from the total value of storage volume, there is only approximately 19,200,000 gallons, or less than five days, of on-site average fuel storage currently available at the BFF on Airport. At the 2014 peak period rate

# THE PORT AUTHORITY OF NEW YORK & NEW JERSEY

## John F. Kennedy International Airport Aircraft Fuel Tank Installation FINAL Environmental Assessment

(4.49 million gallons per day), this calculates as only 4.2 days of on-site storage. For 2015, the peak period rate was 4.675M gallons per day,<sup>25</sup> which equates to only approximately 4.1 days of on-site storage.

Exacerbating the capacity issue is that jet fuel demand is growing at a much higher rate than was forecast in the Fueling Master Plan.<sup>26</sup> In recent years, JFK has experienced several extended periods in the summer and fall when daily fuel usage exceeded daily pipeline delivery by approximately 20 percent. These peak periods have generally occurred for one to two weeks in July and one to two weeks in September. During these times, the daily Jet A fuel consumption at JFK is approximately five million gallons. This exceeds the average daily supply capacity from the Buckeye Pipeline (4.2 million gallons) by 800,000 gallons or 20 percent.<sup>27</sup> To fill that shortfall, on-airport fuel reserves are used, thereby depleting the on-site fuel reserve. Due to the rate of fuel use, that reserve cannot be restored until the peak consumption period ends in the fall. When a peak consumption rate extends for one to two weeks, it can deplete the reserves from 5 to 11 million gallons resulting in between a 2- to 3-day reserve. Based on the 2014 actual fuel consumption data, the airport peak period daily deficit<sup>28</sup> of 154,604 gallons, which is about 4.6 million gallons per month, equates to a 13.8 million-gallon deficit over that peak summer period.<sup>29</sup> Since all of the fuel being supplied to the airport is being consumed during peak demand periods, a deficit of that magnitude cannot be made up until the peak period ends. This could take weeks or months to reestablish the desired reserve storage, depending on the amount of the deficit.

In addition to the on-site storage capacity challenges at JFK, airline operations can present additional challenges. For instance, the airlines may change the size of aircraft serving a route or may completely change the route destination, resulting in changes in jet fuel consumption. Increasing the size of an aircraft or lengthening a route would increase the fuel consumption without increasing operations: contributing to the uncertainty in JFK's on-site fuel reserve.

At the same time, JFK is responsible for providing adequately-sized facilities for jet fuel storage to meet current and future demand while providing the safe delivery of high quality fuel. Safety is enhanced by adequate on-site fuel storage reserve in the event of an interruption in delivery from off-site or an unexpected weather event. An airport must also have adequate reserve storage is necessary in the event that "off-specification" fuel is received (fuel that does not meet proper quality specifications). Fuel is quality-tested several times as it is received and distributed at the airport. If testing reveals that the fuel does not meet the ASTM D1655,<sup>30</sup> standard it is deemed as off-specification and cannot be used by aircraft. The off-specification fuel must be quarantined until it is either removed from the airport by tanker truck or processed on site to meet the standard. Quarantined fuel is stored on-airport temporarily, which reduces the capacity available for reserve. Currently, fuel delivered to JFK is quarantined upon receipt and tested before being distributed throughout the system to better prevent off-specification fuel from contaminating additional portions of the system. That was the case in January 2016, when

26 Allied Aviation. JFK Airport Monthly Account Activity Report. Provided by the Port Authority of New York and New Jersey. Data from June, July, and August 2014.

27 Pond & Company. JFK Fueling System Master Plan 2013 – Final. Prepared on behalf of the Port Authority of New York and New Jersey. November 2013.

28 Deficit as used here refers to fuel deliveries to aircraft exceeding deliveries from the pipeline.

29 According to the Fueling Master Plan, the maximum daily fuel delivered from Buckeye is 4,340,000 gallons. With an average daily demand of 4,940,000 (derived from 2014 Allied Aviation Monthly Fuel Account Activity), there is a deficit every day of 154,604 gallons. That was then converted to gallons per month for the 3 peak months, June, July, and August.

30 American Society of Testing and Materials (ASTM) Standard D1655. Standard Specification for Aviation Turbine Fuels.

# THE PORT AUTHORITY OF NEW YORK & NEW JERSEY

## John F. Kennedy International Airport Aircraft Fuel Tank Installation FINAL Environmental Assessment

off-specification fuel was identified at the Buckeye Terminal in Linden, New Jersey, before the fuel was delivered to JFK. In that case, it took 11 days of settling before it could be transferred out of quarantine.<sup>31</sup>

The Buckeye 601 pipeline serving JFK also serves LaGuardia Airport. Although a second pipeline, Buckeye 602, has begun to supplement the 601 line during times of higher demand, Buckeye 602 is routed to JFK in a parallel alignment to the Buckeye 601, which exposes Buckeye 602 to the same physical risks as Buckeye 601. Buckeye 602 is also multi-product pipeline that carries petroleum products other than jet fuel, which presents the risk of cross contamination. Because there are not multiple independent sources to deliver fuel to JFK, a major weather event or an interruption in the delivery of fuel from off-airport can severely affect airport operations for days or weeks after the event. In fact, significant weather events have impacted JFK fuel pipeline deliveries several times in the last five years. In 2011, Hurricane Irene interrupted the fuel delivery from the Buckeye 601 Pipeline. In June 2012, both the Buckeye 601 and 602 pipelines were shut down after a third party, off-airport contractor struck and damaged one of the pipelines. This resulted in a two-day interruption of jet fuel delivery, during which the reserve dropped to a three-day level. It required two weeks to replenish the reserve inventory. In addition, outages occur periodically for both planned and unplanned maintenance, repairs, and inspections (i.e. the U.S. Department of Transportation (USDOT) requires an integrity assessment of the pipeline every five years, which requires a two-day outage).<sup>32</sup>

For 2015, JFK's peak period usage rate was 4.675M gallons per day,<sup>33</sup> which equates to only approximately 4.1 days of on-site storage. There is no industry standard or required minimum capacity of fuel reserve storage at airports. However, accepted industry practice for an airport of the size, importance to the air transportation system, and activity level of JFK suggests at least a five day on-site fuel storage reserve. Compared to other large hub airports, JFK's current reserve (practical days of fuel storage) on-airport is low (Table 1-1). Hartsfield-Jackson Atlanta International Airport (ATL), ORD, and Newark Liberty International Airport (EWR) have greater than a five-day storage capacity.

Source: Pond & Company. JFK Fueling System Master Plan 2013 – Final. Prepared on behalf of the Port Authority of New York and New Jersey. November 2013. Table 3 on page 29.

- A. All columns converted from barrels (BBLs) to gallons (1 barrel = 42 gallons)
- B. Total Practical Usable Storage is approximately 66.67% of Total On-airport Storage Capacity.
- C. Total CY2012 passenger data is from [http://www.faa.gov/airports/planning\\_capacity/passenger\\_allcargo\\_stats/passenger](http://www.faa.gov/airports/planning_capacity/passenger_allcargo_stats/passenger). Accessed June 16, 2016.
- D. Total CY2012 operations data is from "Traffic Movements 2012 Final from Airports Council International". Accessed June 16, 2016.

The addition of two jet fuel storage tanks, each with the capacity to hold approximately 3.4 million gallons, would provide approximately 1.5 additional days of fuel storage capacity on-airport. This will maintain reserve storage capacity for approximately the next three years. With implementation of the proposed project, based on 2015 average peak period daily usage, JFK would have on-airport fuel reserve of 5.6 days, which would be closer to the storage reserves of other large hub airports and in-line with the industry minimum reserve standard of five days.

## 1.6 Required Federal Approval

The Port Authority requests FAA approval to implement the proposed action. No federal monies will be needed to implement the project. The Federal action for this project requiring NEPA review is the approval by the FAA for a change to the ALP.<sup>34</sup>

In addition, Federal approval of FAA Form 7460-1 *Notice of Proposed Construction or Alteration* will be required for airspace review of the proposed project.

<sup>34</sup> Advisory Circular 150-5070 and the ALP checklist ([http://www.faa.gov/airports/eastern/planning\\_capacity/media/alp\\_checklist.pdf](http://www.faa.gov/airports/eastern/planning_capacity/media/alp_checklist.pdf)).

## 2 Alternatives Analysis

This chapter describes the alternatives identified in the 2012 JFK Aircraft Fueling System Master Plan (Fueling Master Plan)<sup>35</sup> and considered by the Port Authority of New York and New Jersey (Port Authority), to increase the on-airport fuel reserve and storage capacity at John F. Kennedy International Airport (JFK). Furthermore, this chapter outlines the criteria for evaluating the alternatives for adding storage capacity to the Bulk Fuel Facility (BFF). The alternatives presented include the consideration of Federal Aviation Administration (FAA) safety and security standards and regulations as well as best practices in terms of the construction and design of storage capacity alternatives.

As stated in the project description, the Port Authority (Project Sponsor) proposes the construction of two new fuel tanks in order to add storage capacity on-airport. While the FAA guidance regarding jet fuel storage references other guidance, the fuel storage tanks would be constructed using guidance in FAA Advisory Circular 150/5230-4B, which references National Fire Protection Association (NFPA) 30, which references NFPA 650. In addition, the aboveground fuel storage tanks would be constructed and installed in accordance with state and local construction and permitting requirements and standards as well as the Port Authority's Tenant Construction and Alteration Process Manual,<sup>36</sup> American Petroleum Institute (API) Standard 650, and Welded Tanks for Oil Storage, and, Flammable and Combustible Liquids Code.<sup>37</sup> Guidance provided by the Air Transport Association of America (ATA)<sup>38</sup> was also used in this analysis.

The Project Sponsor considered fuel storage alternatives to enhance and maintain an increased on-airport storage capacity. Based on the findings of the Fueling Master Plan, the Project Sponsor determined that delivery alternatives in the short term have been addressed with the commencement of additional jet fuel delivery to JFK by the Buckeye 602 pipeline. However, this supplemental delivery and any improvements to the hydrant system may increase operational efficiency, but does not replace the need for fuel reserve on-airport. Therefore, the alternatives evaluation considers storage alternatives.

Based on the 2015 peak month average daily uplift, the current fuel storage system has the practical capacity of 4.1 days of storage, which is less than at least four similar large-hub airports in the U.S.<sup>39</sup> In addition, the current system contains older equipment that is overly complex and not as efficient as modern systems. This older

39 Pond & Company. JFK Fueling System Master Plan 2013 – Final. Prepared on behalf of the Port Authority of New York and New Jersey. November 2013.

system requires additional staff and expense for maintenance and upkeep. The older equipment is also more difficult to repair, and parts are becoming increasingly difficult to obtain. Most airport fuel farms at large-hub airports utilize modern, automated equipment.

Therefore, in recognition of the current state of the JFK fuel farm, the Port Authority conducted an evaluation of storage scenarios to determine a cost effective, efficient, reliable, and safe system that could maintain fuel quality and provide enough storage to accommodate fuel demand. This chapter describes why certain alternatives were dismissed from consideration, provides the rationale for selecting the alternatives evaluated in detail in this EA, and addresses whether the resulting alternatives would be able to fulfill the project's purpose and need.

---

## 2.1 Purpose of the Proposed Action

*The purpose of the project is the development of additional on-site jet fuel storage at JFK to achieve adequate storage and reserve capacity, in order to meet current and forecasted demand and ensure an uninterrupted fuel supply.*

There is not enough reserve fuel at the airport to provide a secure and adequate supply, as determined by industry practices and a comparison to similar large-hub airports. Based on the size and operations of JFK, a practical storage reserve for JFK should be 5 days or more.<sup>40</sup> This level of storage is necessary in order to prevent the airport from experiencing a deficit of fuel during the peak demand period as well as to safeguard in the event of an interruption in pipeline fuel delivery. Given the level of operations that occur at JFK on a daily basis, the inability of the Airport to provide aircraft fuel would potentially have significant implications on both domestic and international airline operations.

---

## 2.2 JFK Aircraft Fueling System Master Plan

The Fueling Master Plan was developed in 2013<sup>41</sup> because the Port Authority and fuel users identified the need to improve the current fuel storage and distribution system at JFK. This plan considered supply, storage, and hydrant system alternatives. The following sections provide an overview of the Fueling Master Plan and the alternatives considered.

---

<sup>40</sup> Pond & Company. JFK Fueling System Master Plan 2013 – Final. Prepared on behalf of the Port Authority of New York and New Jersey. November 2013.

<sup>41</sup> The Fueling Master Plan of the JFK fuel farm was prepared by Pond & Company. They are an industry leader in aircraft fuel farm design, construction and operation.

### 2.2.1 Master Plan Purpose

The purpose of the Fueling Master Plan was to assess the current fuel system and storage facilities and make recommendations to improve efficiency, reliability and safety, while maintaining fuel quality and flight operations.

### 2.2.2 Master Plan Alternatives

The findings of the Fueling Master Plan indicate that the current system at JFK does not have the capacity to meet current level of operations and the projected growth in fuel demand, as storage supplies at the airport are less than five days. In addition, the report identified that the system is old and overly complicated, inefficient when compared with modern systems, and is not cost effective to operate. Therefore, the master plan included a complete evaluation of the JFK fuel farm system, including the delivery pipeline, existing tanks, control system, and hydrant system. The report also provided recommendations that would address deficiencies in the current system with regard to storage and operations.

Additional fuel delivery to the airport or an increase to the airport's hydrant system capacity would not address the need for adequate on-airport fuel storage reserve. Consequently, additional storage at JFK is still necessary. These alternatives do not serve the purpose and need of the project and therefore were eliminated from consideration in this analysis.

The purpose of the project is to add on-airport jet fuel storage at JFK in order to achieve adequate on-site usable storage and reserve capacity. The screening process in this analysis was established to determine those tank storage alternatives that would best satisfy the purpose and need.

---

## 2.3 Alternatives Screening Process and Results

This section describes the criteria used for evaluating tank storage alternatives to satisfy the purpose and need as well as the results of the application of this criteria to candidate alternatives. These alternatives were also considered in the Fueling Master Plan.

### 2.3.1 Candidate Alternatives

Several storage alternatives were evaluated as part of the Fueling Master Plan by the Project Sponsor. Few alternatives would accomplish the safe and reliable storage of jet fuel on-airport. These alternatives include the use of storage tanks with the modern safeguards, controls, and design. Therefore, there is a limited range of alternatives for the development of additional storage capacity.

- **No Action Alternative.** The No Action alternative is to make no improvements to the existing BFF or Satellite Tank Farm (STF). The only work that would be completed would be to keep the fuel farm in safe, working order

and in compliance with the permits currently held for its operation. These include, but are not limited to approvals associated with the New York State Major Oil Storage Facility Program and the State Pollutant Discharge Elimination System Program. In 2015, the peak period average fuel uplift flow rate was 4.675M gal/day.<sup>42</sup> This equates to approximately 4.1 days on-site. Reserve capacity will continue to diminish as aircraft operations increase, as documented by the FAA-approved forecasts for JFK. Per accepted industry practice, this storage capacity is lower than at other airports of comparable size and operations (see Table 1.1 in Section 1.5).

- **Alternative A, Repair Out of Service Tanks and Upgrade Piping at the BFF.** Alternative A would include the repair of eight existing tanks and upgrading the associated piping and controls. Repairs would include the installation of a modern, more automated system.<sup>43</sup>

Four of these tanks are too small to be practically used to supply the hydrant system, are used for the storage of off-specification fuel and are not connected to the fuel delivery pipeline. Due to these characteristics, they are not suitable for jet fuel storage and therefore, the cost to recommission the tanks is not justifiable.

Four other tanks, connected to the hydrant system, are temporarily out of service and would require significant investment to bring them into current compliance. It is estimated to cost between \$750,000 and \$1 million per tank (total cost between \$3 and \$4 million) to bring these tanks to working order. The tanks that could be repaired would provide 1.8 million gallons in additional capacity or approximately 0.39 additional days of reserve storage, considering the 2015 peak period demand.

- **Alternative B, Upgrade/Automate Tanks at the BFF.** Alternative B would implement a plan to maintain the BFF tanks "as is" with upgrades related to modernizing the control system. This includes the installation of automated valves, tank gauges, as well as upgrade the central control center. The alternative would also include the construction of a new hydrant pump pad at BFF. No new tanks would be added as part of this alternative.

While these improvements would upgrade the existing system, the controls would be localized, which would still require fuel farm staff to manually work the controls for each tank/valve. The estimated cost of this alternative would be between \$15-20 million to upgrade the 52 BFF tanks. In the Fueling Master Plan, this alternative considered the development of a new hydrant pump system, but this would not result in additional reserve storage capacity.

The alternative would reduce the operational expenses due to automation; however this expense reduction was calculated to be minimal and ongoing inspections and testing costs would remain the same.

- **Alternative C, Construct New Tanks.** Alternative C is the proposed construction of new tanks. To add sufficient capacity without interrupting operations, the tanks would either have to be added to the existing system or to replace out of service tanks. The tanks would be constructed at the BFF, as the BFF is the only location for receipt and settling of jet fuel delivered from off-airport. New tanks would be constructed with modern automation and controls and would be connected to the existing distribution system at the BFF. The

---

<sup>42</sup> June, July, and August fuel uplift values, provided by Callan, Patrick. Director – Jet Fuel Supply, Fuel Division, Delta Air Lines. Email correspondence. June 30, 2016.

<sup>43</sup> While the Fueling Master Plan states 10 tanks would be upgraded, the Port Authority subsequently repaired and returned to service two of those tanks in 2015.

Fueling Master Plan recommended a State of the Art Concept that included the construction of up to nine larger tanks to replace the existing tanks, but that plan is part of a complete replacement of the existing BFF and STF system that may be implemented at a later date if demand dictates the need for additional storage.

### **2.3.2 Evaluation Criteria**

These four candidate alternatives were evaluated based on the Project Sponsor's goals as well as the purpose and need for the project. The following criteria was derived from the project goals and need. In order to satisfy the purpose and need for the project, implementation of an alternative must:

- Result in an increase of on-airport storage capacity/reserve
- Enhance the quality and safety of fuel delivered to aircraft on-airport
- Increase efficiency and cost effectiveness of fueling operations

#### **2.3.2.1 Result in increase of on-airport storage capacity/reserve**

This is the primary purpose of the project. The on-site storage capacity does not provide adequate on-site reserve fuel and during periods of peak demand, storage levels can be reduced to as little as three days. Five or more days of reserve storage is preferable from an industry-standard perspective and could threaten the availability of commercial and cargo flights on a worldwide basis, should JFK experience a fuel shortage. The ability to establish and maintain a reserve on-airport in advance of summer peak periods would help alleviate shortages when demand exceeds delivery capacity for short periods of time. Any alternative that would increase on-airport storage capacity to or above the recommended practical storage reserve of 5 days or more would be considered favorable.

#### **2.3.2.2 Enhance the quality and safety of fuel delivered to aircraft on-airport**

The current operation has very little capacity for isolating off-specification fuel deliveries. Quality testing above required levels occurs in Linden, New Jersey for this reason, as JFK does not have enough storage capacity to quarantine a delivery of off-specification fuel.<sup>44</sup> The risk of receipt of off-specification fuel is now more of a concern because the multi-product Buckeye 602 line recently modified to serve JFK presents a greater risk for the receipt of off-specification fuel. A favorable alternative would increase on-airport storage reserve to enable the airport to temporarily quarantine off-specification fuel deliveries while still providing adequate fuel reserves for airport operations. This would also eliminate the need for additional testing in Linden, New Jersey, which results in delivery delays because the fuel is temporarily held to conduct this testing. This receipt of off-specification fuel recently occurred at Baltimore Washington International Airport, which reduced the airport's

---

<sup>44</sup> Callan, Patrick. Director – Jet Fuel Supply, Fuel Division, Delta Air Lines. Telephone communication. June 21, 2016.

reserve storage capacity from seven days to two days.<sup>45</sup> Examples such as this demonstrate the need for additional on-airport storage to accommodate these types of events.

Modern controls would also enhance system operation by reducing the need for manual operation of tanks while increasing system reliability, as older equipment is more difficult to repair, and parts are difficult to obtain.

### 2.3.2.3 Increase efficiency and cost effectiveness of fueling operations

Efficiency refers to how fuel is received, distributed, and stored. More tanks in the fuel farm system requires more operations and maintenance than fewer, larger tanks. The current fuel farm system consists of older, smaller, less efficient tanks that are largely controlled manually. The fuel system includes 102 tanks (BFF and STF combined), all of which provide less than optimum capacity for an airport such as JFK, as evidence by JFK’s high operations and maintenance costs.

According to the Fueling Master Plan, in 2012, the operating budget for the JFK fuel facilities was \$13.954 million. This is significantly higher than comparable airports in the U.S. due to the age of the fuel farm and complexity of operating and maintaining the aging tanks and infrastructure. Costs recorded in 2012 (Table 2-1) demonstrate that JFK spends three times more in direct labor than other comparable airports, and the overall costs are triple that of other airport fuel systems. Any alternative that would increase efficiency of the system, which would indirectly result in a more cost efficient system, would be considered favorable.

**Table 2-1 2012 Costs of Airport Fuel System Operations**

Expenses	Airports				
	Boston Logan International Airport	Chicago O’Hare International Airport	Honolulu International Airport	Los Angeles International Airport	JFK (Allied Aviation and the Port Authority)
Salaries and Wages	\$1,376,302	\$3,239,180	\$2,817,023	\$2,460,200	\$9,262,072
Direct Expenses	\$1,211,899	\$2,192,053	\$2,345,968	\$1,104,100	\$5,285,367
Indirect Expenses	\$955,398	\$978,826	\$526,065	\$1,081,800	\$1,762,287
Management Fee	\$174,251	\$196,968	\$175,272	\$230,400	\$728,618
<b>TOTAL</b>	<b>\$3,717,850</b>	<b>\$6,607,027</b>	<b>\$5,864,328</b>	<b>\$4,876,500</b>	<b>\$17,402,343</b>

Source: Pond & Company. JFK Fueling System Master Plan 2013 – Final. Prepared on behalf of the Port Authority of New York and New Jersey. November 2013.

<sup>45</sup> Callan, Patrick. Director – Jet Fuel Supply, Fuel Division, Delta Air Lines. Telephone correspondence. June 21, 2016.

### **2.3.3 Evaluation Results**

The four alternatives considered were subject to evaluation under these criteria.

#### **2.3.3.1 No Action Alternative**

The No Action alternative would maintain the current system and thus would not result in an increase to on-airport jet fuel storage capacity. The alternative would not reduce the need for fuel quality testing or reduce operating and maintenance costs. Equipment would not be upgraded as part of this project and the fuel distribution system would remain the same.

#### **2.3.3.2 Alternative A: Repair Out of Service Tanks and Upgrade Piping at the BFF**

Alternative A would result in more on-airport storage capacity/reserve. The tanks that could be repaired would provide 1.8 million gallons in additional capacity or approximately 0.39 days of additional reserve storage capacity at the peak period demand (2015). This additional capacity, when added to the useable capacity at JFK (19.2 million gallons) equals 21 million gallons. If storage is calculated for the 2015 peak month average daily uplift volume of 4.674 million gallons, the storage capacity of the airport would be approximately 4.5 days of storage; less than the desired five days of storage. While any increase in storage would provide a greater ability for the airport to quarantine off-specification fuel, this additional capacity does not greatly enhance the ability of the airport to manage off-specification fuel. The required repairs, tank and valve upgrades, would not enhance fuel safety, increase tank efficiency, nor would the upgraded tanks provide sufficient reserve capacity. The airport would incur more operating and maintenance costs associated with the six additional tanks.

#### **2.3.3.3 Alternative B: Upgrade/Automate Tanks at the BFF**

Alternative B would automate valves, tank gauges, as well as upgrade the central control center. This alternative would not increase on-airport jet fuel storage capacity. This alternative would not provide the airport a greater ability to quarantine off-specification fuel. Alternative B would increase efficiency and the safety of fuel delivery with automations; however, the controls would be localized, which would require similar operating and maintenance as existing conditions.

#### **2.3.3.4 Alternative C: Construct New Tanks**

Alternative C would increase on-airport storage capacity. New tanks could be designed to a size that would provide an additional day of storage capacity of the peak period, so that JFK would have five or more days of practical capacity. This additional storage on-site would provide the airport a greater ability to quarantine off-specification fuel from existing conditions than Alternative A and B. New tanks would be constructed with modern automation and controls, and would be connected to the existing distribution system at the BFF. This would increase efficiency and cost effectiveness. In addition, based on industry trends, larger and fewer tanks are

**THE PORT AUTHORITY**  
OF NEW YORK & NEW JERSEY

John F. Kennedy International Airport  
Aircraft Fuel Tank Installation  
FINAL Environmental Assessment

being constructed at airports across the country. Fewer tanks are less expensive to operate and maintain, providing more efficient operation. Larger tanks also take up less land than multiple, smaller tanks, which is an important consideration for the limited land available at the Airport.

Table 2-2 Summary of Alternatives Screening

Criteria	Candidate Alternatives			
	No Action	Alternative A – Repair Out of Service Tanks, Upgrade Piping	Alternative B – Upgrade Working Tanks with Automation	Alternative C – Construct New Tanks
Result in increase of on-airport storage capacity/reserve	NO	NO - would add 0.39 days at peak periods and provide less than 5 days of storage	NO	YES - Storage can be added with new tanks to achieve 5 or more days
Maintain quality and safety of fuel delivered to aircraft on-airport	NO	YES – provides minimal additional storage for settling and quarantine of off-specification fuel	NO	YES – provides additional storage for settling and quarantine of off-specification fuel
Increase Efficiency and Cost effectiveness of operations	NO	NO - While controls would be automated, they would still be localized; continued use of smaller tanks require more operation and maintenance costs	YES - Increases efficiency of operating existing smaller tanks, minimal operating and maintenance cost benefits	YES – addition of new tanks would include modern equipment and larger, fewer tanks, which increase efficiency and reduce costs

As summarized in Table 2-2, the No-Action Alternative was eliminated from further consideration because it does not meet any of the criteria set forth as part of the purpose and need for the project. Alternatives A and C would result in an increase of on-airport capacity with additional tanks being added to service. However, Alternative A provides only a minimal increase of storage that would not enable the airport to achieve the desired five days of storage capacity. Alternative A and C both provide additional storage for settling and quarantine of off-specification fuel. However, Alternative A would not increase the efficiency or cost effectiveness of operations, as the continued use of smaller tanks would require greater operation and maintenance costs. Alternative B would not result in additional on-airport storage and therefore, would not provide additional storage for settling and quarantine of off-specification fuel. Alternative C would increase efficiency and cost effectiveness more than Alternative A with the design of fewer, larger tanks with modern equipment. Therefore, Alternative C is the only alternative that would fulfill all criteria in support of the project’s purpose and need and was selected for further refinement.

## 2.3.4 Alternative C Refinement

A refinement of Alternative C is required to determine the optimal size, number, and location of new tanks. As previously described, Alternative C would include the construction of new tanks on-airport to provide additional storage capacity. In order to determine the optimal characteristics of these tanks, the Project Sponsor considered optimum tank size and quantity based on available locations at the fuel farm.

### 2.3.4.1 Optimum Tank Size and Quantity

Tank size and quantity of tanks is a refinement of Alternative C that can affect operational costs and labor requirements. Fewer tanks to operate result in less operational and maintenance costs. The Fueling Master Plan considered either 50,000 barrels (bbls)<sup>46</sup> or 80,000 bbls tanks, as per industry standard sizes and constructability for an airport of the size of JFK.<sup>47</sup> Another measure considered when evaluating the proper tank size is the total fuel per acre of land used. Since JFK and the fuel farm is land constrained, the greater amount of fuel per acre of land used would be preferable in the refinement of the alternatives.

Based on the incremental cost of larger tanks offset by the reduced number of tanks to achieve desired on-site capacity when built out, the evaluation in the Fueling Master Plan recommended the installation of 80,000 bbls tanks.

### 2.3.4.2 Location

Since the purpose of the new tanks would be to add on-airport storage capacity, the ability to construct tanks without disrupting the operations of existing tanks is critical. Two sites were considered that met this criteria: 1) land directly adjacent to the BFF previously used for storage and staging (project area) (Figures 1-1 and 1-2), and 2) a second location that would require demolition of four out of service tanks and two active tanks.

Both sites could accommodate two 80,000 barrel tanks, adding capacity to the BFF. While construction of the tanks would be the same at each location (estimated as \$32.6 million), the cost of demolition of the six tanks would be an additional cost of \$1.1 million and there would be a loss of capacity from the demolition of the two active tanks. Therefore the undeveloped site was considered the preferable site.

### 2.3.4.3 Summary

Fewer, larger tanks at the fuel farm are more operationally efficient and cost-effective to build, operate and maintain as compared to the existing system, and would result in lower costs to operate the fuel system.

---

<sup>46</sup> 1 barrel equals 42 gallons.

<sup>47</sup> These sizes are well below allowable tank size in New York City. Pond & Company. JFK Fueling System Master Plan 2013 – Final. Prepared on behalf of the Port Authority of New York and New Jersey. November 2013.

Two, 80,000 bbls tanks would provide approximately 6.05 million gallons of additional on-airport useable storage. The larger tanks would offer a higher fuel storage volume per acre of land used. When that capacity is added to the existing useable capacity at JFK (19,200,000 gallons), the airport would then have approximately 25,250,000 gallons usable capacity. For the 2015 peak month average daily uplift volume of 4.674 million gallons, this capacity equates to approximately 5.4 days of storage. Based on lower operating costs and the ability to provide an adequate increase of on-site storage, two 80,000 bbls tanks would satisfy the project's purpose and need. The preferred location, on cleared land adjacent to the BFF previously used for storage and staging, would not require the removal or demolition of other tanks and would not pose a disruption to or a reduction in the capacity of the existing fuel system, whereas the other location would require the demolition of existing tanks.

---

## **2.4 Alternatives Considered in this EA**

This EA considers a No Action Alternative and an alternative that would implement the proposed action as described in Chapter 1 and as described as the results of the analysis of the candidate alternatives. This section provides descriptions of these alternatives.

### **2.4.1 No Action Alternative**

The No Action Alternative would result in no modifications or improvements to the existing fuel farm. The fuel farm would operate as it does currently and the only work that would be completed would be to keep the fuel farm in safe, working order and in compliance with the permits currently held for its operation.

### **2.4.2 Preferred Alternative (Alternative C, refined)**

Under the Preferred Alternative, the Project Sponsor would implement the proposed action, with the construction of two 80,000 bbls tanks on cleared previously disturbed land adjacent to the BFF (Figure 2). The Preferred Alternative consists of the installation of two permanent fuel tanks, each approximately 80,000 bbls in capacity, two new jet fuel fill and suction lines, connections to existing utilities, a fire foam protection system, stormwater discharge connection lines, new fencing, and a new segment added to the existing access road. These tanks would be installed in a previously-disturbed area that served as construction material storage and staging. This would avoid the demolition of existing out of service and in-service tanks, which would avoid the disruption of existing fuel system operations and storage capacity.

## 3 Affected Environment

This chapter identifies the natural and human environment within the project's study area. Federal Aviation Administration (FAA) Order 1050.1F states that for analysis under the National Environmental Policy Act (NEPA), an affected environment "succinctly describes the environmental conditions of the potentially affected geographic area or areas."<sup>48</sup> The Order presents detail of those resource categories that should be considered, if applicable, in this analysis.

This chapter of the Environmental Assessment (EA) summarizes the existing (baseline) conditions for those resource categories present within the project's study area. Because of the project's characteristics and the location of the Airport, nine resource categories were not applicable to this analysis. These are Department of Transportation Act Section 4(f); Farmlands; Historic, Architectural, Archaeological, and Cultural Resources; Land Use; Natural Resources and Energy Supply; Noise and Noise-Compatible Land Use; Socioeconomics, Environmental Justice, and Children's Environmental Health and Safety Risks; Visual Effects; and Wild and Scenic Rivers. The reasons these categories have been dismissed from further consideration are presented in Section 3.2. The remaining resource categories are discussed in Section 3.3.

---

### 3.1 Study Area

Study areas are the locations that may be directly affected by a proposed action (for example, construction) or the indirect consequences of the implementation of those actions (for example, construction of a building may result in changes to an airport's lighting system). The environmental overview must capture the appropriate study area for the resources considered in order to adequately estimate the level of potential impacts of the alternatives that are being considered in the EA.

For this project, the proposed action is confined to the airport's Bulk Fuel Facility (BFF) and, specifically, to an approximately 4.1-acre area immediately adjacent to the BFF and within it. The proposed actions include construction of two jet fuel tanks and associated infrastructure as well as the enlargement of the BFF boundary to accommodate the area of direct impact upon which the two tanks would be installed. The associated study area (one-mile radius around the project area) was defined on the basis of resource-specific guidance including

---

<sup>48</sup> Federal Aviation Administration. Order 1050.1F. Environmental Impacts: Policies and Procedures. July 16, 2015.

New York State Office of Parks, Recreation and Historic Preservation New York State Archaeological Association-prepared survey guidelines.<sup>49</sup>

---

## **3.2 Resource Categories Not Applicable**

Nine resource categories were eliminated from further evaluation due to either the absence of such resources within the study area or because proposed activities would not affect the existing conditions of the resource category. Resources not present or that would not be affected by implementation of proposed activities are discussed in Sections 3.2.1 through 3.2.9.

### **3.2.1 Department of Transportation Act Section 4(f)**

Section 4(f) of the Department of Transportation Act of 1966 is currently codified as 49 USC Section 303(c) and involves evaluating potential use of a publicly-owned land of a park, recreational area, or wildlife and waterfowl refuge of national, state, or local significance or land of a historic site of national, state, or local significance. For the purposes of this study, only properties within the project area or within one mile of the project area that could potentially qualify as Section 4(f) or 6(f) lands were considered.

There are no parks, recreational areas, wildlife/waterfowl refuges, or historic properties within the project area or immediately adjacent to the project area (Figure 3-1).

Considering a study area of one mile around the project area, six parks, one recreation area, one wildlife refuge, and one National Register of Historic Places (NRHP) eligible historic property are present (Figure 3-1). No Land and Water Conservation Fund (LWCF) Section 6(f) funds have been expended on the historic property, parks, or recreational areas within the 1-mile radius. The closest park to receive LWCF funds in the last five funding cycles (2011-2015)<sup>50</sup> is the QueensWay, managed by The Trust for Public Lands. The QueensWay, which will convert an abandoned section of the Rockaway Beach Branch Railroad right-of-way to a recreational path, will terminate in the Village of Ozone Park, approximately 1.9 miles northwest of the project area.

The six parks within the 1-mile study area are Belt Parkway,<sup>51</sup> Southern Fields,<sup>52</sup> Locust Grove Civic Triangle,<sup>53</sup> Lefferts Playground,<sup>54</sup> an unnamed location between Lefferts Playground and Police Officer Edward Byrne Park, and Officer Byrne Park.<sup>55</sup> Except for the Belt Parkway, all of the parks are owned and maintained by New York City, and all of them contain recreational facilities. Five of the six parks are within the right-of-way of the Belt

# THE PORT AUTHORITY OF NEW YORK & NEW JERSEY

## John F. Kennedy International Airport Aircraft Fuel Tank Installation FINAL Environmental Assessment

Parkway which, in turn, is classified as a parkway by New York City Parks. Belt Parkway lies north of Bergen Basin and the associated recreational parks are on the north side of the Parkway.

The Gateway National Recreation Area (GATE) and its associated Jamaica Bay Wildlife Refuge (Refuge) are within the 1-mile study area. The northern boundary of GATE is approximately 4,600 feet south of the project site. As discussed in Section 3.3.2, Bergen Basin, located approximately 720 feet west of Tank 1, connects to the Jamaica Bay estuarine complex. However, the basin is not designated as a New York City Special Natural Waterfront Area (SNWA) or NYSDEC Significant Coastal Fish and Wildlife Habitat (SCFWH), nor is it located within National Parks Service (NPS) Jamaica Bay Wildlife Refuge.

There are 32 previously inventoried archaeological sites, buildings, or structures within the study area. Of these, only one historic building has been determined eligible to the NRHP. It is designated New York Office of Parks, Recreation, and Historic Preservation (NY SHPO) Unique Site Number (USN) 08101.009386 and the resource is a Depression-era public school building. The eligibility of the resource is not based on its setting nor on events that might have occurred in that location. Because setting does not contribute to the resource's eligibility a change in the resource's viewshed would not be a significant impact (see discussion in Section 3.2.3 and also Appendix B).

Therefore, Section 4(f) does not need to be addressed, and no LWCF Section 6(f) funds have been expended on properties within or immediately adjacent to the project area.

### 3.2.2 Prime and Unique Farmlands

The Farmland Protection Policy Act (FPPA) of 1994 and its implementing regulations (7 Code of Federal Regulations (CFR), parts 657-658) regulates federal actions with the potential to convert farmland to non-agricultural uses. The FPPA assures that to the extent possible, federal programs are administered to be compatible with state, local units of government, and private programs and policies to protect farmland.

The United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) identifies the project area and adjacent soil map units as Bigapple fine sand, 0 to 3 percent slopes (BiA); Urban land, tidal marsh substratum, 0 to 3 percent slopes (UmA); and Urban Land-Verrazano complex, 0 to 3 percent slopes (UVA).<sup>56</sup> None of these soils are classified by USDA NRCS as prime farmland.

The project area and adjacent soils are "made-lands"<sup>57</sup> that have never been used for agricultural purposes. Therefore, FPPA regulations do not apply.

---

<sup>56</sup> USDA, NRCS. 2016. Custom Soil Report for Queens County, New York. Report downloaded June 8, 2016. 20160608\_15271403292\_37\_Soil\_Report.pdf.

<sup>57</sup> Any unnatural soil matrix such as fill.

### 3.2.3 Historic, Architectural, Archaeological, and Cultural Resources

Historic and cultural resources include archaeological sites, structures, buildings, objects, landscapes, and districts. The evaluation of cultural resource impacts was conducted in accordance with the significance thresholds identified in FAA Order 5050.4B, FAA Order 1050.1F and the 1050.1F Desk Reference. The historical and cultural resources evaluations were conducted to support FAA's requirements for compliance with the Section 106 regulations issued pursuant to the National Historic Preservation Act (NHPA), as amended (36 CFR 800). The cultural resources assessment also considered the New York State Historic Preservation Act, Section 14.09 regulations. Also considered were the New York City Landmarks Preservation Commission (NYC LPC) guidelines pertinent to the treatment of projects involving State and City jurisdictions.

The NHPA (36 CFR 800.16(d), as amended) defines an Area of Potential Effect (APE) as the "geographic area or areas within which an undertaking may directly or indirectly cause changes in the character or use of historic properties, if any such properties exist." The APE for the proposed activities addresses direct impact locations. The direct impact area is all of the land that would be subject to disturbance during the preparation and implementation of proposed activities. Direct impacts also may occur in locations that may be affected by the removal of existing fence and any other landscape actions that would require breaking ground.

No APE for indirect effects was defined because the setting of the single eligible building does not contribute to the building's NRHP significance. Further, the existing BFF tanks, similar in function and configuration to the proposed tanks to be installed, have been in place for over 50 years.

Based on available records at the NY SHPO, no systematic cultural resources survey of the project area or its immediately adjacent areas has been conducted and no previously inventoried cultural resources are present.<sup>58</sup> The NYC LPC site file does not list any landmarks or landmark districts within the project area or immediately adjacent to it.

The one-mile study area contains 32 previously inventoried archaeological sites, buildings, or structures. Of these, only one resource has been determined eligible to the National and State Registers of Historic Places (N/SR). NY SHPO assigned the property USN 08101.009386. It is Public School (P.S.) 146, which was built in 1936.<sup>59</sup> The site was determined eligible to the NR under Criteria A and C.<sup>60</sup> Criterion A was applied to the resource as it is representative of "the response of the city to an expanding school-age population and the tenets of the educational reform movement." Under Criterion C, the school was described as "an intact and representative example of classical inspired institutional architecture of the Depression era." The school is located approximately 4,200 feet west of Tank 1.

---

58 Matthew W. Shepard. Personal communication, Matthew W. Shepard, NYOPRHP Historic Preservation Specialist/Digital Information, to Carol S. Weed and Christine Smith, VHB, RE: CRIS inventoried properties within the 1-mile study area. June 16, 2016.

59 Kathy Howe. 2000 (June 14). Resource Evaluation, Multiple Addresses [including P.S. 146, 98-01 159th Avenue, Queens], Queens, NY. NY SHPO CRIS PRHP00000355\_DOE\_0000151\_08101\_009373.pdf, downloaded July 6, 2016.

60 NRHP Criteria A = Associated with events that have made a significant contribution to the broad patterns of our history. NRHP Criteria C = resources that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction. [https://www.nps.gov/nr/publications/bulletins/nrb15/nrb15\\_2.htm](https://www.nps.gov/nr/publications/bulletins/nrb15/nrb15_2.htm)

The remaining 31 resources consist of 13 buildings/structures that have been determined not eligible to the N/SR, 14 buildings/structures with no N/SR eligibility determination, and four archaeological sites that also have no eligibility determination. All of these inventoried properties are west or north of Bergen Basin and none are within John F. Kennedy International Airport's (JFK's) boundary east of Interstate 678 (I-678).

The NY SHPO was notified on July 14, 2016 by electronic submission of the project and an area of potential effect (APE) for direct impacts. By electronic transmission dated July 14, 2016, the NY SHPO assigned Project Review number 16PR04834 to the proposed project. On August 8, 2016, NY SHPO determined that no historic properties will be affected by this undertaking (Appendix B).

### **3.2.4 Compatible Land Use**

FAA Order 1050.1F, and its accompanying desk reference, state that Section 1502.16(c) of the Council on Environmental Quality (CEQ) Regulations specify consideration of "[p]ossible conflicts between the proposed action and the objectives of Federal, regional, State, and local...land use plans, policies and controls for the area concerned."<sup>61</sup> One aspect of compliance with the regulation is that proposed activities are compatible with existing and planned land uses at its proposed site of implementation.

The Airport is within Queens County, a borough of New York City (NYC). As mapped by NYC, JFK and its immediately adjacent lands are within Community District (CD) 83 that, according to the city GIS-based map system NYCityMap, encompasses seven square miles with a residential population of 16 persons.<sup>62</sup> NYC classifies CD 83 as a Queens County Joint Interest Area, with interest shared between Queens Community Districts 10 and 13. In NYC, community boards and the associated community districts specify the land use and zoning categories for locations within their jurisdictions.

The project area is located on land leased by the Port Authority of New York and New Jersey (Port Authority) from NYC and surrounded on all sides by active airport use. The land use is designated as a "Transportation and Utility" area, designated as such by NYC Planning and depicted on NYCityMap.<sup>63</sup> The project location is zoned by NYC as "M1-1," a Manufacturing District. The existing BFF lies fully within the M1-1 District and the Transportation and Utility land use area as well. The project area, therefore, lies within a location appropriate for its function and no changes to the land parcel's zoning or use classifications are required for implementation of proposed activities.

### **3.2.5 Natural Resources and Energy Supply**

Under 40 CFR 1502.16 (e) and (f), consideration must be given to the energy requirements of the proposed activities and the use of natural or consumable resources. Due to the nature of proposed and existing activities associated with the jet fuel tanks, the materials to be used are specified in FAA regulations. In the case of the

---

61 Federal Aviation Administration. 1050.1F Desk Reference, Chapter 9 Land Use, pg. 9-1. July 16, 2015.

62 NYCityMap. Queens County, JFK and Vicinity, Community District 83, Area and Number of Residents. File accessed July 9, 2016.

63 NYCityMap. Ibid.

proposed activities, electricity, fire foam, telecommunications in the form of fiber optics, and water would be required. Electricity and water are both supplied by Port Authority, which is reselling utility provided by others. The fiber optics would be installed under the tanks for monitoring purposes. There are no third-party telephone, cable or internet providers required as part of these activities. As for fire foam, this is a mixture of foam concentrate and water that would be provided by the fuel farm operator via project-specific piping.<sup>64</sup> Operating the tanks and associated facilities would not require a substantial amount of additional electrical power than what is currently used at the BFF. Electricity for the lighting and monitoring equipment are the only project components to require additional energy to operate.

The construction associated with the proposed action would not require significant energy use. The amount of electricity that would be used for temporary lighting or operations, such as welding, would be insignificant. As for water, following construction, the tanks would need to be tested hydrostatically. It is assumed that the water used in the first tank test would be re-used for the second and also to test the tank containment areas. There may be minor, temporary increase in usage for both utilities during the construction period, but these usage spikes would not be sustained in the long term or cause a burden to other activities or the supply of electricity and water to the surrounding community.

### 3.2.6 Noise and Noise-Compatible Land Use

Consideration of noise is conducted in accordance with FAA Order 1050.1F; FAA Order 5050.4B; and NEPA, as specified in the CEQ's *Regulations for Implementing the National Environmental Policy Act* (40 CFR 1500-1508). FAA Order 1050.F specifies the elements of a noise analyses appropriate for an EA, including noise metrics, acceptable models for computing the noise, and the impact or reporting criteria that are to be used to judge the importance of any change that is projected to occur as a result of a proposed federal action. These guidelines assume that the proposed action would result in a change to the characteristics of an airport's operations.

Proposed activities include the construction of two aboveground fuel tanks, an associated access road extension within the BFF, a service road extension and a driveway south of the tank fence line, a new stormwater lift station, and associated underground supporting infrastructure and/or pipes including electricity, fuel foam, telecommunications, and water. These actions would not result in a change to any airport operations, flight patterns, or flight frequency.

Construction activities would result in noise impacts associated with the project area's site preparation as well as installation of the tanks and underground pipes and lines. Construction will occur during normal working hours and would require the use of pile drivers, excavators of various sizes, and a paver. These impacts would be temporary and concentrated on the 4.1-acre project area, associated access road and perimeter fence. The construction would include the use of mechanical excavators. Noise levels at JFK would not permanently change and there would be no change in the noise levels associated with aircraft. For these reasons and since the

---

<sup>64</sup> Johnke, Paul. Argus Consulting, Project Manager, Professional Engineer. Email correspondence. Johnke to Carol Weed. RE: project utilities, July 11, 2016.

project lies within a Transportation and Utility land use classification zoned for manufacturing purposes (Section 3.2.4), consideration of noise and its associated noise-compatible land use effects is not warranted.

### **3.2.7 Socioeconomic Conditions, Environmental Justice Communities, and Children's Environmental Health and Safety Risk**

According to FAA Order 5050.4B, DOT Order 5610.2(a), FAA Order 1050.1F, and *1050.1F Desk Reference*, the FAA must evaluate proposed airport development actions to determine if they would cause social impacts. This evaluation should consider socioeconomic effects, effects on health and safety risks to children, as well as an assessment of the potential to cause disproportionate and adverse effects on low-income or minority populations. In addition, EO 12898, *Federal Actions to Address Environmental Justice in Minority and Low-Income Populations*, requires all Federal agencies to identify and address disproportionate and adverse human health or environmental effects of their programs, policies, and activities on minority and low-income populations.

Neither the tanks nor their associated infrastructure require the presence of additional full- or part-time operators. Proposed activities would result in the generation of several temporary, full-time equivalent (FTE) construction jobs at the site. These jobs would not significantly impact socioeconomic conditions within the 1-mile study area.

There are seven U.S. Census tracts within a one-mile radius of the Project (Census tracts 716, 818, 838, 846.01, 846.02, 864, and 884).<sup>65</sup> All of these Census tracts are located in Queens County, New York. The project area is located in Census tract 716, which, at the time of the 2010 Census, had a recorded population of zero residents.<sup>66</sup>

Of these Census tracts, two contain a population that is classified as 20 percent or greater below poverty level, according to the 2014 American Community Survey (ACS) (Census tracts 818 and 846.02).<sup>67</sup> The closest of these, Census tract 846.02, is approximately 2,000 feet north of the project area. Minority populations have been defined by the U.S. Census as all racial or ethnic population groups except non-Hispanic White. Census tracts within a one-mile radius of the project area that contain a minority population of 50 percent or greater in 2014 were Census tracts 818, 838, 846.01, 846.02, and 864. The closest of these, Census tract 846.02, located approximately 2,000 feet north of the project area. This is the same census tract that is classified as 20 percent or greater below poverty level. While minority and low-income populations are present within a one-mile radius of the project area, proposed activities would not directly affect these residents, as activities are contained within the airport boundary and would not include land acquisition. Activities would not alter airport activity levels, aircraft noise levels, or user activity at JFK. Due to the nature of the proposed activities, environmental impacts are not anticipated to have a potential for disproportionately high and adverse effects these minority or poverty populations or any environmental justice communities.

---

<sup>65</sup> U.S. Census Bureau American Fact Finder was used to Census Tracts within a one-mile radius of the Project. Accessed July 14, 2016.

<sup>66</sup> ACS Demographic and Housing Estimates, U.S. Census Bureau, 2010-2014 American Community Survey 5-Year Estimates. Accessed July 14, 2016.

<sup>67</sup> Poverty Status in the Past 12 Months, U.S. Census Bureau, 2010-2014 American Community Survey 5-Year Estimates. Accessed July 14, 2016.

The health and safety of children who reside in these minority and low-income census tracts would not be adversely impacted since products and substances that a child is likely to come in contact with or ingest (such as air, food, drinking water, recreational waters, soil, or products they might be exposed to) would not be affected by proposed activities.

### **3.2.8 Visual Effects (Light Emissions, Visual Resources/Visual Character)**

Per FAA Order 5050.4B and FAA Order 1050.1F, the FAA considers “the extent to which the proposed action or alternative(s) would either: 1) produce light emissions that create annoyance or interface with activities; or 2) contrast with, or detract from, the visual resources and/or the visual character of the existing environment.”<sup>68</sup>

There are no specific Federal-level special purpose laws or requirements that are specific to light emissions or visual effects, however five resource categories have regulations that require consideration of light emissions on particular resource elements. The categories and their sections herein are biological resources (3.3.1), coastal resources (3.3.2), Department of Transportation, Section 4(f) resources (3.2.1); historical, architectural, archaeological, and cultural resources (3.2.3); and wild and scenic rivers (3.2.9). As discussed in those sections, none of the resource categories have elements that are light sensitive or that would be affected by light changes.

The proposed tanks would be lit by light emitting diode (LED) fixtures fixed to the top of each tank (see Section 1.4 for detailed discussion). Other LED fixtures would be fixed to poles within the project area to support operations and safety. The light fixtures would be downward facing to avoid impact on aircraft operations and to avoid off-airport disturbance. The lighting fixtures would conform to minimum industry standards and the number of new lights are consistent with lighting of other areas of the BFF. For these reasons, further consideration of the visual effects resulting from the project’s implementation are not warranted.

### **3.2.9 Wild and Scenic Rivers**

No surface waters that are listed under the federal Wild and Scenic Rivers Act (WSRA) and its implementing regulations (36 CFR part 297, subpart A) occur at or within a one-mile radius of the subject property. For that reason, a WSRA analysis is not necessary and therefore not presented herein as part of Water Resources.

Similar to the federal act, the New York State Wild, Scenic and Recreational Rivers Act protects those rivers within New York State determined to possess outstanding scenic, ecological, recreational, historic, and scientific values. These attributes may include value derived from fish, wildlife and botanical resources, aesthetic quality, archaeological significance and other cultural and historic features. The purpose of the Act is to preserve designated rivers “in a free flowing condition, protecting them from improvident development and use. This policy is intended to preserve the enjoyment and benefits derived from these rivers for present and future

---

<sup>68</sup> Federal Aviation Administration. 1050.1F Desk Reference, Chapter 13, Visual Effects. July 16, 2015.

generations.”<sup>69</sup> Based on review of the Wild, Scenic and Recreational Rivers Act list of protected rivers, there are no state protected rivers at or within one mile of JFK.<sup>70</sup>

---

## 3.3 Resources Present

The following resources were determined to be pertinent in the analysis of the proposed actions (Preferred Alternative) and comparison to the No Action alternative.

### 3.3.1 Air Quality

FAA Order 5050.4B provides a basis for delineating the scope of the FAA’s assessment of air quality under NEPA and the Federal Clean Air Act (CAA). This section includes information on air quality management, relevant air quality regulations, and the attainment/non-attainment status of Queens County.

#### 3.3.1.1 Regulatory Agencies

The management of air quality conditions in the State of New York, including the area in and around JFK, is the responsibility of federal, state, regional, and local governmental air quality regulatory agencies. Under the federal CAA, the United States Environmental Protection Agency (EPA) establishes the guiding principles and policies for protecting air quality conditions throughout the nation. The EPA’s primary responsibilities in this area include promulgating the National Ambient Air Quality Standards (NAAQS),<sup>71</sup> which defines ambient air concentrations for criteria pollutants that are considered safe for public health, welfare and the environment, as well as approving State Implementation Plans (SIPs).

The Federal Aviation Administration (FAA) is the primary agency involved in, and responsible for, ensuring that air quality impacts associated with proposed airport projects adhere to the reporting and disclosure requirements of the NEPA as well as the General Conformity rule of the CAA.

On the state level, the NYSDEC is responsible for enforcing the CAA including compliance with the NAAQS, the issuance of air emission source permits, monitoring of air quality conditions, and assisting in the preparation of the SIP. Regionally, New York State is part of the Ozone Transport Commission (OTC).<sup>72</sup> This organization comprises of 12 states and the District of Columbia working together in order to advise the EPA on transport

72 Ozone Transport Commission (OTC), <http://www.otc.org/>

issues and for developing and implementing regional solutions to the ground-level ozone problem in the Northeast and Mid-Atlantic regions.<sup>73</sup>

On a local level, the New York City Department of Environmental Protection (NYCDEP) is responsible for updating and enforcing the Air Pollution Control Code, which has the goal to preserve, protect and improve the air resources of the city.

### 3.3.1.2 National Ambient Air Quality Standards

Pursuant to the requirements of the CAA, the EPA establishes, enforces, and periodically reviews the NAAQS. The NAAQS are set to safeguard public health and environmental welfare against the detrimental effects of ambient air pollution and are defined as primary and/or secondary standards. Primary NAAQS are health-based standards geared toward protecting sensitive or at-risk portions of the population such as asthmatics, children, and the elderly. Secondary NAAQS are welfare oriented and are designed to prevent decreased visibility and damage to animals, vegetation, and physical structures. NAAQS have been established for six common air pollutants, referred to as criteria pollutants: carbon monoxide (CO), lead (Pb), nitrogen dioxide (NO<sub>2</sub>), ozone (O<sub>3</sub>), particulate matter (PM) which includes particulate matter with a diameter of 10 microns or less (PM<sub>10</sub>) and a diameter of 2.5 microns or less (PM<sub>2.5</sub>), and sulfur dioxide (SO<sub>2</sub>). The NAAQS are listed in Table 3-1.

---

<sup>73</sup> OTC members include: Connecticut, Delaware, the District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, and Virginia.

		1-hour	35 ppm	
Lead (Pb)	Primary and Secondary	Rolling 3-month average	0.15 µg/m <sup>3</sup> <sup>(1)</sup>	Not to be exceeded
Nitrogen Dioxide (NO <sub>2</sub> )	Primary	1-hour	100 ppb	98 <sup>th</sup> percentile of 1-hour daily maximum concentrations, averaged over 3 years
	Primary and Secondary	Annual	53 ppb <sup>(2)</sup>	Annual Mean
Ozone (O <sub>3</sub> )	Primary and Secondary	8-hour	0.070 ppm <sup>(3)</sup>	Annual fourth-highest daily maximum 8-hour concentration, averaged over 3 years
Particulate Matter (PM <sub>2.5</sub> )	Primary	Annual	12 µg/m <sup>3</sup>	Annual mean, averaged over 3 years
	Secondary	Annual	15 µg/m <sup>3</sup>	Annual mean, averaged over 3 years
	Primary and Secondary	24-hour	35 µg/m <sup>3</sup>	98 <sup>th</sup> percentile, averaged over 3 years
Particulate Matter (PM <sub>10</sub> )	Primary and Secondary	24-hour	150 µg/m <sup>3</sup>	Not to be exceeded more than once per year on average over 3 years
Sulfur Dioxide (SO <sub>2</sub> )	Primary	1-hour	75 ppb <sup>(4)</sup>	99 <sup>th</sup> percentile of 1-hour daily maximum concentrations, averaged over 3 years
	Secondary	3-hour	0.5 ppm	Not to be exceeded more than once per year

Source: EPA, National Ambient Air Quality Standards (NAAQS) at <http://www.epa.gov/air/criteria.html>, June 2016.

Notes: ppb = parts per billion, ppm = parts per million, and µg/m<sup>3</sup> = micrograms per cubic meter of air.

- (1) In areas designated nonattainment for the Pb standards prior to the promulgation of the current (2008) standards, and for which implementation plans to attain or maintain the current (2008) standards have not been submitted and approved, the previous standards (1.5 µg/m<sup>3</sup> as a calendar quarter average) also remain in effect.
- (2) The level of the annual NO<sub>2</sub> standard is 0.053 ppm. It is shown here in terms of ppb for the purposes of clearer comparison to the 1-hour standard level.
- (3) Final rule signed October 1, 2015, and effective December 28, 2015. The previous (2008) O<sub>3</sub> standards additionally remain in effect in some areas. Revocation of the previous (2008) O<sub>3</sub> standards and transitioning to the current (2015) standards will be addressed in the implementation rule for the current standards.
- (4) The previous SO<sub>2</sub> standards (0.14 ppm 24-hour and 0.03 ppm annual) will additionally remain in effect in certain areas: (1) any area for which it is not yet 1 year since the effective date of designation under the current (2010) standards, and (2) any area for which implementation plans providing for attainment of the current (2010) standard have not been submitted and approved and which is designated nonattainment under the previous SO<sub>2</sub> standards or is not meeting the requirements of a SIP call under the previous SO<sub>2</sub> standards (40 CFR 50.4(3)), A SIP call is an EPA action requiring a state to resubmit all or part of its State Implementation Plan to demonstrate attainment of the require NAAQS.

### 3.3.1.3 Attainment/Nonattainment Status

The EPA also designates areas as either meeting or not meeting the NAAQS. An area with measured pollutant concentrations lower than the NAAQS is designated as an attainment area, and an area with measured pollutant concentrations that exceed the NAAQS is designated as a nonattainment area. Areas that are in transition back to attainment are designated as maintenance areas. Ozone nonattainment areas are further classified as extreme, severe, moderate, or marginal. An area is designated as unclassifiable when there is a lack of sufficient data to form the basis of an attainment status determination.

Queens County is currently designated by the EPA to be a marginal nonattainment area for the 2008, 8-hour ozone standard. Table 3-2 summarizes and provides additional information regarding the EPA-designated nonattainment status for the county.

**Table 3-2 EPA-designated Nonattainment Status for Project Area**

County, State	Pollutant	Area Name	Classification	County NA Part/Whole? <sup>(1)</sup>
Queens County, New York	8-hour Ozone (2008 Standard)	New York-N. New Jersey-Long Island	Marginal	Whole

Source: EPA, Green Book at <http://www.epa.gov/airquality/greenbook/>, June 2016.

Notes: (1) The column "County NA Part/Whole" indicates whether only a part of the county or the whole county is designated nonattainment.

The CAA requires individual states to develop, update and maintain SIPs that will demonstrate compliance with the NAAQS. Common features of a SIP include attainment timeframes or milestones, area-wide emissions inventories and budgets and control/mitigation strategies that are to be employed to achieve attainment.

### 3.3.1.4 General Conformity Requirements

The General Conformity Rule of the federal CAA prohibits federal agencies (including the FAA) from permitting or funding projects that do not conform to an applicable SIP. The General Conformity Rule applies only to areas that are designated nonattainment or maintenance.

As a means of demonstrating conformity with the SIP, project-related emissions of the applicable nonattainment/ maintenance pollutants are compared to *de minimis* level thresholds.<sup>74</sup> If the emissions exceed the thresholds, a formal Conformity Determination would be required to demonstrate that the action conforms to the applicable SIP. Conversely, if project-related emissions are below the *de minimis* levels, the project is automatically assumed to conform to the SIP. Because JFK is located in an ozone non-attainment area, and is part of the OTC, the applicable *de minimis* levels are listed in Table 3-3.

<sup>74</sup> USEPA, De Minimis Levels, <https://www.epa.gov/general-conformity/de-minimis-emission-levels>, June 2016.

John F. Kennedy International Airport  
Aircraft Fuel Tank Installation  
FINAL Environmental Assessment

Table 3-3 General Conformity de minimis Levels

Pollutant	Tons/Year
Ozone	100 for NOx and 50 for VOCs

Source : EPA, *De Minimis* Levels, <https://www.epa.gov/general-conformity/de-minimis-emission-levels>, June 2016.

As shown on the table above, these thresholds apply to nitrogen oxides (NOx) and volatile organic compounds (VOCs) – the two primary precursors to ozone formation.

### 3.3.1.5 Transportation Conformity Requirements

The CAA also contains a Transportation Conformity Rule that functions similarly to the General Conformity Rule. The Transportation Conformity Rule restricts federal funding to highway or transportation projects that do not conform to an applicable SIP. The responsibility of transportation conformity determination is vested in the Federal highway Administration (FHWA) and state Department of Transportation (DOT). The proposed improvements to JFK are not subject to the Transportation Conformity Rule because it is not a roadway/ highway project.

### 3.3.2 Biological Resources (including Fish, Wildlife, and Plants)

As defined by in the 1050.1F Desk Reference, biological resources include fish, wildlife and plants, and their habitats. These resources function as integrated resources within ecosystems, which are generally defined as biological communities of interacting organisms and the physical environment in which they occur. Accordingly, the biological resources and habitat assessment provided herein includes analyses of the three aforementioned biological resource categories and the degree to which they function as integrated components of the overall ecosystem.

#### 3.3.2.1 Regulatory Setting

At the federal level, wildlife and plants, including rare/protected species, are protected under various statutes, including the Endangered Species Act, Bald and Golden Eagle Protection Act, Fish and Wildlife Coordination Act, Magnuson-Stevens Fishery Conservation and Management Act, Marine Mammal Protection Act, and the Migratory Bird Treaty Act.

Under Section 7 of the Endangered Species Act, if the FAA determines that an action may affect a threatened or endangered species, the FAA must initiate consultation with the United States Fish and Wildlife Service (USFWS) or the National Marine Fisheries Service, as appropriate, to ensure that any action that the FAA authorizes, funds, or implements is not likely to jeopardize the continued existence of any federally-listed species or result in destruction or adverse modification of their habitat.

At the State level, endangered, threatened and species of special concern listed by New York State or the federal government are protected pursuant to New York State Environmental Conservation Law (ECL) Parts 11 and 13 and its implementing regulations (6 New York Codes, Rules and Regulations [NYCRR] Part 182). Any activity that would result in a take (i.e., "pursuing, shooting, hunting, killing, capturing, trapping, snaring and netting...and all lesser acts such as disturbing, harrying or worrying...") are prohibited, except as authorized by an Incidental Take Permit issued by the NYSDEC.

### 3.3.2.2 Ecological Communities and Vegetation

Until recently, the majority of the project site was utilized as a storage area for stockpiles of recycled roadway millings and sediments. More recently, the stockpiles have been removed, however a surficial layer of these materials remains on the ground surface. An existing facility building (Building 242) also occurs within the project site and other buildings are adjacent to it. The remainder of the project site consists of ground surfaces of pavement, including a historical subsurface layer of pavement that was recently uncovered.

With respect to vegetation and habitat, the New York Natural Heritage Program (NYNHP) publication "Ecological Communities of New York State" (ECNYS) provides detailed descriptions and includes global and state rarity rankings for many communities (i.e., "habitats") found within the State of New York, including communities that are representative of the disturbed communities that occur at the project site, as described above. Based upon a review of this resource and observations during the November 2015 field assessment, three ECNYS communities have been identified at the project site. The three communities are identified in ECNYS as,

- "Construction/Road Maintenance Spoils: a site where soil from construction work and/or road maintenance materials have been recently deposited. There is little, if any, vegetation."
- "Paved Road/Path: a road or pathway that is paved with asphalt, concrete, brick, stone, etc. There may be sparse vegetation, rooted in cracks in the paved surface."
- "Urban Structure Exterior: the exterior surfaces of metal, wood, or concrete structures (such as commercial buildings, apartment buildings, houses, bridges) or any structural surface composed of inorganic materials (glass, plastics, etc.) in an urban or densely populated suburban area. These sites may be sparsely vegetated with lichens, mosses, and terrestrial algae; occasionally vascular plants may grow in cracks."

According to ECNYS, the Construction/Road Maintenance Spoils, Paved Road/Path and Urban Structure Exterior communities are unranked cultural communities (i.e., communities that are created or altered by humans) that are distributed throughout the State of New York.

As described above, with the exception of scattered patches of pioneering "weedy" herbaceous vegetation common to disturbed/developed sites (e.g., mugwort [*Artemisia vulgaris*], dandelions [*Taraxacum spp.*], foxtails [*Setaria spp.*], spurge [*Euphorbia spp.*], etc.), the project site is largely unvegetated. Based upon the foregoing, the project site is comprised of cultural (constructed by humans) and largely unvegetated habitats.

### 3.3.2.3 Wildlife

Given the disturbed, previously developed, and largely unvegetated conditions described above, as well as similar conditions that exist within the surrounding properties of the BFF, the project site does not represent a significant habitat area for wildlife. Avian species are the commonly observed or expected fauna at the project site, specifically those species that are adapted to cultural habitats and a high degree of human activity, such as pigeon (*Columba livia*), house sparrow (*Passer domesticus*), European starling (*Sturnus vulgaris*) and herring gull (*Larus argentatus*). Limited foraging habitat for these species may exist at the project site, however significant nesting areas do not occur. Similarly, the project site represents potential habitat for a few mammals that are adapted to cultural habitats, such as raccoon (*Procyon lotor*), Norway rat (*Ratus norvegicus*), house mouse (*Mus musculus*) and other small rodents. Given the subsurface composition and recent ground disturbance described above, potential habitat for burrowing rodents that may otherwise be present beneath the project site is limited.

The project area does not represent significant habitat for reptiles and amphibians, most of which require vegetated and/or aquatic habitat for at least some portion of their life cycles, and are not adapted to the disturbed/developed conditions currently occur at the project area. The project area and the surrounding BFF are terrestrial in nature and therefore do not contain surface waters to support fish or populations of other aquatic organisms. Surface water habitats occur within the nearby marine waters of Bergen Basin and Jamaica Bay.

There are no vegetated tidal wetlands within the project area. Bergen Basin, located approximately 500 feet to the north and west of the project area, is an open-water tidal channel that has been historically dredged and otherwise altered to provide boat and fuel line access to the JFK BFF. The banks of Bergen Basin along the BFF are armored with rip-rap shorelines and bulkheading, and are developed with several piers associated with facility uses. Bergen Basin connects to the 18,000-acre Jamaica Bay estuarine complex. However, Bergen Basin is not designated as a SNWA or NYSDEC Significant Coastal Fish and Wildlife Habitat (SCFWH), nor is it located within National Parks Service (NPS) Jamaica Bay Wildlife Refuge.

The Jamaica Bay estuarine complex is located to the south of the project site and the surrounding development of the BFF. This complex consists of extensive marine open water habitats, with numerous islands, tidal creeks, marshes, brackish ponds and upland field and wooded habitats. These largely undeveloped features represent habitat for extensive inventories of birds, mammals, amphibians, reptiles, finfish, insects and other wildlife, and are an important recreational resource. More than half of the estuarine complex (9,155 acres) is managed by the NPS as the Jamaica Bay Wildlife Refuge, which is included within the larger GATE. The refuge is an important habitat for resident and migratory birds, with over 325 species reported, including waterfowl, wading birds, shorebirds, raptors and passerine birds. Jamaica Bay also hosts large populations of finfish, crustaceans and other marine organisms, including significant spawning populations of horseshoe crab (*Limulus polyphemus*) and the diamondback terrapin turtle (*Malaclemys terrapin*). The majority of the aquatic and wetland habitats within Jamaica Bay have been designated as a NYC SNWA and a NYSDEC SCFWH.

### 3.3.2.4 Rare/Protected Species

With respect to rare/protected species, the USFWS IPaC Trust Resources Report<sup>75</sup> for the project site includes three marine shorebirds; piping plover (*Charadrius melodus*), red knot (*Calidris canutus rufa*) and roseate tern (*Sterna dougallii dougallii*), as well as the vascular plant sandplain gerardia (*Agalinis acuta*), which is a plant of marine shorelines (Appendix C). Potentially suitable habitat for these species exists to the south of the project site within the Jamaica Bay estuarine complex. However, suitable habitat to support these four species does not exist at or adjacent to the project site, and, as detailed below, no NYNHP records exists for these species as occurring at or in the vicinity of the project site. Accordingly, the four species included on the USFWS Trust Resources Report would not be expected at the project site, and they were not observed during the field assessment.

Consultations were undertaken with NYNHP to determine whether records exist for known occurrences of rare or New York State-listed wildlife, plants or significant natural communities at or in the immediate vicinity (generally within one-half mile) of the subject property. In correspondence dated June 2016 (Appendix C), the NYNHP reported that no such records currently exist.

### 3.3.3 Coastal Resources

Coastal resources include coastal barriers and coastal zones. Applicable regulations that address these coastal resources are detailed in FAA Order 5050.4B, FAA Order 1050.1F, and guidance provided in the 1050.1F Desk Reference.<sup>76</sup> According to Order 1050.1F, any proposed action that meets one of these conditions: 1) within a coastal zone, 2) on a barrier island, 3) within a coral reef ecosystem, 4) that can cause an unacceptable risk to human safety or property in a coastal zone, or 5) that can cause adverse impacts to a coastal environment must be considered in evaluating this resource category. Of these factors, the project area is not within a coral reef ecosystem.

#### 3.3.3.1 Coastal Barriers

Barrier islands are geologically unstable formations that protect the mainland by buffering storm or hurricane-driven winds or waves. As a result, these islands protect fish, wildlife, human life, and property along coasts and shorelines. The Department of the Interior (DOI), through the United States Fish and Wildlife Service (USFWS) and the NPS, develops and maintains the Coastal Barrier Resource System (CBRS) maps.

According to the New York State CBRS map, Jamaica Bay, to the south of the project by approximately 4,600 feet is subject to the Coastal Barrier Resources Act of 1982 (CBRA), as amended by the Coastal Barrier Improvement Act of 1990.<sup>77</sup> Jamaica Bay is classified as an "Otherwise Protected Area" by the Federal Emergency Management Agency (FEMA).<sup>78</sup>

### **3.3.3.2 Coastal Zone Management**

Coastal zones are those waters and their bordering areas located in states along the coastlines of the Atlantic and Pacific Oceans the Gulf of Mexico, and the shorelines of the Great Lakes. These zones include islands, beaches, transitional and intertidal areas, and salt marshes. The Coastal Zone Management Act of 1972 (CZMA) established the Federal Coastal Zone Management (CZM) Program to encourage and assist states in preparing and implementing management programs to “preserve, protect, develop, and, where possible, to restore or enhance the resources of the Nation’s coastal zone.”

Pursuant to the CZMA, New York State adopted the Waterfront Revitalization and Coastal Resources Act in 1981, which created the New York Coastal Management Program under direction of the New York State Department of the State (NYSDOS), Division of Coastal Resources. The Coastal Management Program encourages coordination among all levels of government and communities to develop Local Waterfront Revitalization Programs (LWRPs) that promote sound waterfront planning that is consistent with federal, state, and local coastal policies and objectives. Once a LWRP is adopted by the community and approved by the New York Secretary of State and National Oceanic and Atmospheric Administration, all permitting, funding, and direct actions must be consistent with the approved LWRP.

Based upon review of the New York State Coastal Boundary Map,<sup>79</sup> the project is located within a Coastal Zone and subject to consistency with a LWRP (Figure 3-2). Specifically, the project is subject to consistency analysis with NYSDOS Coastal Management Program (CMP) Policies and the policies of the New York City Waterfront Revitalization Program (NYCWRP). The coastal zone applications and supporting materials were filed with the New York State Department of State (NYDOS) and the New York City Department of City Planning (NYC DCP) by the Port Authority on September 29, 2016 (Appendix D). The agencies returned no adverse effect statements on November 7, 2016 and October 11, 2016, respectively.

### **3.3.4 Hazardous Materials, Solid Waste, and Pollution Prevention**

The project site tank area is south of the BFF. The fuel line will be installed by either horizontal directional drill under an existing BFF access road and a proposed extension of it on the north side of the project site or traditional cut and cover technique. The project site stormwater from the tank area will be dispersed via existing piping to the wastewater treatment facility within the BFF. The stormwater from the southern access road (limited use) will be drained via piping to a treatment device prior to discharge at Outfall #5 into Bergen Basin. The stormwater from the tank containment areas and from the north access road extension will be directed via the BFF’s existing stormwater piping to the existing stormwater treatment facility for discharge at Outfall #4 into Bergen Basin. Since 1978, the Port Authority has been performing active remediation of various portions of the BFF for the removal of Light Non Aqueous Phase Liquids (LNAPL). The remedial activities are currently performed under NYSDEC Spill # 9106609 and are primarily focused on historical impacts beneath the footprint of the

---

<sup>79</sup> New York State Department of State, Office of Communities and Waterfronts. New York State Coastal Zone Boundary Map. Available online at: [http://appext20.dos.ny.gov/coastal\\_map\\_public/map.aspx](http://appext20.dos.ny.gov/coastal_map_public/map.aspx). Accessed June, 2016.

# THE PORT AUTHORITY OF NEW YORK & NEW JERSEY

## John F. Kennedy International Airport Aircraft Fuel Tank Installation FINAL Environmental Assessment

existing BFF above-ground storage tanks (ASTs). The remediation methods have included large diameter well skimming, focused vacuum truck extraction, and dual phase extraction. The remedial activities will continue at the BFF, under the guidance of NYSDEC, in accordance with regulatory requirements.<sup>80</sup>

Based on a visual site inspection of the project area in November 2015, no existing structures were present. At that time, the area within the 4.1-acre project site where the tanks would be located was covered in milling piles, displaced concrete Jersey barriers, and pavement debris (see Appendix B, Photographs C1 through C4). These surface materials and an underlying concrete slab were subsequently removed by the Port Authority in Spring 2016 (see Appendix B, Photograph C5). The project area, also in 2016, was expanded west to encompass the location of the hazardous materials remediation trailers. The trailers will be relocated outside of the project area and as noted in Section 1.4, the hazardous materials will be removed by the Port Authority.

All of the utility connections to the airport's existing utility infrastructure are located to the south of the project area (water pipelines), to the north within the BFF (fire foam facility), or to the east (electricity and telecommunication tie-ins) within the BFF (Figures 1-2, 1-3, and 1-4). The jet fuel fill and suction lines would interconnect with existing distribution elements within the BFF. These locations are to the north of the project area. The storm water lines, as described above, will be drained via piping and either a treatment device for discharge at Outfall #5 or the existing stormwater treatment facility for discharge at Outfall #4 into Bergen Basin. An existing access road to the north of the project area would be extended to service the new tanks. In addition, an existing service access road to the south of the project area will be realigned to avoid the project site but will remain used in a limited capacity. The realignment of the southern service road relocates its access to the existing vehicle parking lot so that a portion of the lot can be demolished and incorporated into the project site.

The existing BFF aboveground storage tanks (ASTs) and support structures as observed in November 2015 were in good condition, with no evidence of leaks or release. These tanks are not located within the project area and will not be disturbed by proposed activities. In addition, a part of an existing vehicle parking area and an equipment storage area are present outside of the project area, but on property adjacent to it.

Six geotechnical bores (LB-1 through LB-6) were conducted within the project area in Spring 2016. The summary logs of data (GINT logs) and a log legend are presented in Appendix E. The geotechnical borings were performed as a part of the geotechnical investigation to prepare the foundation design for the tanks. Based on the information provided in the logs, "fill deposits" were identified within the proposed project area to terminal depths ranging from 10 to 20 feet below grade surface. As indicated in the USFWS National Wetland Inventory (NWI) description, the Bergen Basin has been historically dredged and otherwise altered to provide boat and fuel line access to the BFF. As such, it is likely that the fill deposits within the project area originated from multiple episodes of filling with dredge spoils from Bergen Basin.

The deposits identified in the geotechnical boring logs were characterized as sand and sand with silt. Trace inclusions included in the fill deposits (present in various levels) were coal, concrete, glass, plastic, tar, and

80 PANYNJ. 2016 (October). "John F Kennedy International Airport Bulk Fuel Farm NYSDEC Spill No.:9106609 2nd and 3rd Quarter 2016 Remedial Progress Report." Report prepared by PANYNJ Environmental Engineering Department.

wood. The deepest fill deposits were recorded in Bore LB-3 where traces of tar and coal were found at 20 feet below ground surface (bgs) and plastic was recovered at 17 feet bgs.

### **3.3.4.1 Environmental Database Review and Summary**

Environmental Data Resources, Inc. (EDR) was retained to provide a computerized database search within an American Society of Testing and Materials (ASTM) Practice E1527-05-standard radius for the subject property (Appendix F, presented on CD).<sup>81</sup> The database results were reviewed to determine if areas within the project area are present on any of the regulatory agency lists. Based upon the information provided in the EDR database report, no spills have been reported in the project site.

Several releases were identified in the EDR database report on the Emergency Response Notification System (ERNS) database, the New York State Department of Environmental Conservation (NYSDEC) Spills (NYSPILLS) database and the Leaking Storage Tanks Incidents (LTANKS) database within the BFF. However, based on the results of the EDR database search, previous releases have not been located within the project site.

### **3.3.4.2 Solid Waste**

The Solid Waste Disposal Act (SWDA) of 1965 (42 USC Sections 6901 et Seq.) provides regulations regarding the disposal of solid waste to reduce danger to human health and the environment. Under the SWDA, solid waste includes garbage, refuse, and sludge from waste water treatment plants, water supply treatment plants, and air pollution control facilities. The term also refers to other discarded material, including solid, liquid, semisolid, or contained gaseous material generated from industrial, commercial, mining, agricultural and/or community activities.

Garbage and refuse generated during construction would be removed by the local municipality waste hauler such as Royal Waste, which is the general JFK provider.<sup>82</sup> There are no septic, potable water, or treatment facilities located within the project area or immediately adjacent to it that will be impacted by the proposed action.

### **3.3.5 Water Resources (including Wetlands, Surface Waters, Floodplains, Groundwater, and Wild and Scenic Rivers)**

As defined by the FAA guidance, water resources include wetlands, surface waters, floodplains, groundwater, and wild and scenic rivers. Rather than functioning as separate and isolated resources, these resources function together as integrated components of a watershed. As such, disruption of any single component of a watershed can result in adverse effects to the functionality of the entire system. Accordingly, the water resources assessment provided herein includes analyses of the first four individual water resource categories (wetlands, surface waters, floodplains, and groundwater), as well as their integrated function as components of the overall

---

81 EDR. 2016. The EDR Radius Map Report with GeoCheck, 15468 Brookville Blvd, Jamaica, NY 11430, Inquiry Number: 4667137.2s, July 7, 2016.

82 Knoesel, Ed. The Port Authority of New York and New Jersey. Environmental Manager. Email Correspondence. RE: Garbage hauler at JFK Airport. July 14, 2016.

watershed. No surface waters that are listed under the federal Wild and Scenic Rivers Act (WSRA) and its implementing regulations (36 CFR part 297, subpart A) or in the New York State Wild, Scenic and Recreational Rivers Act occur at or in the vicinity of the subject property. Therefore, this water resource category was dismissed in Section 3.2.7, Resource Categories Not Applicable.

### **3.3.5.1 Wetlands**

The U.S. Army Corps of Engineers (USACE) and the EPA jointly define wetlands as: "Those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs and similar areas such as wet meadows, mud flats, rivers, streams, as well as estuarine areas."<sup>83</sup> At the federal level, such features are protected by Executive Order 11990 (Protection of Wetlands), the Fish and Wildlife Coordination Act, DOT Order 5660.1A (Preservation of the Nation's Wetlands), Rivers and Harbors Act, Safe Drinking Water Act and Sections 401 and 404 of the Clean Water Act (CWA). Among other protective measures, these special purpose laws direct Federal agencies to avoid the destruction and modification of, or construction within, existing wetlands where there is a practicable alternative.

Specifically, Section 404 of the CWA regulates the discharge of dredged or fill material within navigable waters and prohibits such discharge wherever the discharge of fill will have an unacceptable adverse effect on water supplies, shellfish beds and fishery areas, wildlife, or recreational areas. The Section 404(b)(1) guidelines indicate that no discharge of dredged or fill material shall be permitted if there is a practicable alternative to the proposed discharge that would have less of an adverse impact on the aquatic ecosystem, and requires that appropriate and practicable steps be taken to minimize potential adverse impacts on the aquatic ecosystem. If a proposed project would impact existing wetlands, DOT Order 5660.1A requires federal transportation agencies to make a finding that there is no practicable alternative. Further, any uses or activities that directly impact federally-regulated wetlands (e.g., draining, filling, dredging, discharges, outfalls, construction of structures, etc.) require a permit from the USACE.

The NWI maps<sup>84</sup> provide information to the public on the extent and status of the Nation's wetlands, and these maps are guidance documents made available " *...to provide [USFWS biologists] and others with information on the distribution of wetlands to aid in wetland conservation efforts.*"<sup>85</sup> Although certain wetlands that appear on the NWI maps may be regulated by the federal government as "waters of the United States," according to the NWI Wetlands Mapper website, " *There is no attempt to define the limits of proprietary jurisdiction of any Federal, state, or local government, or to establish the geographical scope of the regulatory programs of government agencies.*"

85 United States Fish and Wildlife Service. Available online at <http://www.fws.gov/wetlands/NWI/index.html>. Accessed June 23, 2016.

The marine waters of Bergen Basin (a portion of the larger Jamaica Bay estuarine complex) are located approximately 500 feet to the north and west of the project site, with infrastructure of the JFK fuel farm (i.e., fuel tanks, fuel lines, pavement and buildings) located in between. Bergen Basin is included in the NWI (Figure 3-3) where it is classified according to the NWI's Wetland and Deepwater Habitats Classification System<sup>86</sup> as an Estuarine and Marine Deepwater feature with a subtidal water regime and an unconsolidated bottom (E1UBL). As Bergen Basin is a non-isolated feature that is connected via surface flow to navigable waters of Jamaica Bay and the Atlantic Ocean, it is regulated by the USACE as a "water of the United States."

Tidal wetlands are protected under Article 25 of the New York State Environmental Conservation Law ([NYSECL] "Tidal Wetlands Act") and its implementing regulations (6 NYS Codes, Rules and Regulations (NYCRR) Part 661). In general, many uses and activities within regulated tidal wetlands located in NYC or within the 150-foot adjacent area of a regulated tidal wetland located in NYC require a permit from the NYSDEC. The NYSDEC Tidal Wetland Maps depict the approximate boundaries of tidal wetlands that are under agency jurisdiction. According NYSDEC Tidal Wetland Maps, Bergen Basin is regulated by the NYSDEC as a Littoral Zone (LZ) tidal wetland (Figure 3-3).

Based upon observations during a November 2015 site visit, there are no wetlands or surface waters located at or adjacent to the project area. As indicated, the marine waters of Bergen Basin are located approximately 500 feet to the north and west of the project area, with infrastructure of the JFK Fuel Farm (i.e., fuel tanks, fuel lines, pavement and buildings) located in between. As indicated in the NWI description, the Bergen Basin is comprised of unvegetated, open-water tidal channel. This channel has been historically dredged and otherwise altered to provide boat and fuel line access to the JFK bulk fuel farm. The banks of Bergen Basin along the bulk fuel farm are armored with rip-rap shorelines and bulkheading, and are developed with several piers associated with facility uses. Accordingly, vegetated tidal wetlands do not occur in the vicinity of the project site.

To the south of the project site, Bergen Basin connects to the 18,000-acre Jamaica Bay estuarine complex, which consists of extensive marine open water habitats, with numerous islands, tidal creeks, marshes, brackish ponds and upland field and wooded habitats. These largely undeveloped features represent habitat for extensive inventories of birds, mammals, amphibians, reptiles, finfish, insects and other wildlife, and are an important recreational resource. More than half of the estuarine complex (9,155 acres) is managed by the NPS as the Jamaica Bay Wildlife Refuge, which is included within the GATE.

### 3.3.5.2 Floodplains

Floodplains are defined in Executive Order (EO) 11988, *Floodplain Management*, issued May 24, 1977, as "the lowland and relatively flat areas adjoining inland and coastal waters including flood-prone areas of offshore islands, including at a minimum, that area subject to a one percent or greater chance of flooding in any given year."<sup>87</sup> The EO 11988 further directs federal agencies to reduce the risk of flood loss, minimize the impacts of floods on human safety,

---

86 Cowardin et al. Classification of Wetlands and Deepwater Habitats of the United States. United States Fish and Wildlife Service. 1979.

87 Executive Order 11988, <http://www.archives.gov/federal-register/codification/executive-order/11988.html>

health, and welfare and restore and preserve the natural and beneficial values served by floodplains. An assessment is required under of whether the placement of structures in a floodplain would be a "significant floodplain encroachment." FAA Order 1050.1F also establishes the criteria for FAA floodplain impacts evaluation.

The Federal Emergency Management Agency (FEMA) is the federal agency with primary responsibility for mapping areas subject to flooding under the National Flood Insurance Program (NFIP). FEMA defines the 100-year flood event (also known as the base flood or one-percent annual flood) as the flood that has a one percent chance of being equaled or exceeded in any given year. Most federal and state agencies use the 100-year flood event as the standard for regulations related to floodplain management. FEMA defines the 500-year flood event as the flood that has a 0.2 chance of being equaled or exceeded in any given year.

A review of FEMA Flood Insurance Rate Maps for the project and surrounding area indicates that the project site is located within the 500-year floodplain (Figure 3-4). As such, no portions of the project area are located within the 100-year floodplain.

### 3.3.5.3 Surface Waters

Pursuant to the FAA guidance, separate analysis of surface waters are only necessary for surface waters that have not been previously analyzed under the overall water resources categories of wetlands, floodplains or groundwater. As the surface waters located proximate to the project area have already been analyzed within the Wetlands Section, no additional analysis is necessary.

### 3.3.5.4 Groundwater

At the federal level, groundwater resources are protected by the Safe Drinking Water Act, which prohibits federal agencies from funding actions that would contaminate an EPA-designated sole source aquifer or its recharge area. At the state level, the NYSDEC has established various water quality standards and regulations to protect groundwater in 6 NYCRR Parts 700-706.

Based upon review of the summary logs from six geotechnical borings that were emplaced within the proposed tank area in Spring 2016 (Appendix E), depth to groundwater beneath the project site is approximately 9 feet bgs. Due to the close proximity of Bergen Basin (500± feet to the north and west of the project site), the groundwater table elevation beneath the project site may be subject to tidal influence. As the existing ground surface is comprised primarily of pervious surfaces (i.e., milled stone and sediments), groundwater beneath the project site is subject to stormwater influence through surface infiltration.

### 3.3.5.5 Summary

The wetland/surface water, floodplain and groundwater resources described above function as integrated components of the watershed comprised of the project site and surrounding areas of the BFF. Currently, stormwater within portions of the BFF is collected within the existing stormwater system, which discharges to the

**THE PORT AUTHORITY**

Aircraft Fuel Tank Installation  
FINAL Environmental Assessment**

JFK stormwater treatment plant. As the project area is comprised primarily of pervious surfaces that are not connected to the existing stormwater system, stormwater infiltrates to the subsurface and the underlying groundwater table over time. Due to tidal influence to the shallow groundwater table beneath the project site, the wetlands/surface waters of Bergen Basin and the Jamaica Bay estuarine complex are therefore also subject to stormwater influence. Looking at the individual water resources from a system perspective, if left uncontrolled, any potential adverse effects to the quantity or quality of stormwater within the project site has the potential to adversely affect the floodplain, groundwater and wetland/surface water resources within and beyond the watershed area.

## 4 Environmental Consequences

This chapter describes the potential impacts of the Preferred Alternative as compared to the No Action Alternative on the natural and human environment. Federal Aviation Administration (FAA) Order 1050.1F states that the environmental consequences analysis should include consideration of the “direct effects and their significance, the indirect effects and their significance, and cumulative effects and their significance.”

Nine resource categories were dismissed from consideration in Chapter 3 and are not addressed in this chapter. These resource categories are Department of Transportation Section 4(f); Prime and Unique Farmlands; Historic, Architectural, and Cultural Resources; Compatible Land Use; Natural Resources and Energy; Noise and Noise-Compatible Land Use; Socioeconomic Conditions, Environmental Justice Communities, and Children’s Environmental Health and Safety Risk; Visual Effects, and Wild and Scenic Rivers

The consequences of the No Action and Preferred Alternatives are different for particular resources. However, there is no division in the subsections between the No Action Alternative and the Preferred Alternative, and exceptions are noted when applicable. Construction impacts are discussed within each resource category. The potential cumulative impacts of the Preferred Alternative are discussed following the resource-specific categories.

---

### 4.1 Air Quality

This section presents and discusses the annual operational emissions from the two proposed jet fuel storage tanks at John F. Kennedy International Airport (JFK) (Preferred Alternative). Construction-related emissions during the 2017 and 2018 construction period are also presented.

#### 4.1.1 Operational Emissions

The primary air pollutant of concern from the operation of the two proposed fuel storage tanks at JFK is volatile organic compounds (VOCs). Emissions from these fixed roof tanks are a result of evaporative losses during storage (known as breathing losses or standing storage losses) and evaporative losses during filling and emptying operations (known as working losses). The amount of VOCs emitted from these sources depend directly on the tank capacity, vapor pressure of the stored liquid, utilization rate of the tank, and atmospheric conditions at the tanks’ location.

Fuel tank-related emissions were computed using the EPA's TANKS Emissions Estimation Software (TANKS).<sup>88</sup> Detailed calculation methodologies and data used in the TANKS model are presented as Appendix G of this document. Operational emissions for the two proposed fuel storage tanks amounted to 0.87 tons of VOCs per year. Since the operational emissions are well below the applicable *de minimis* level of 50 tons per year for VOC, the General Conformity Rule does not apply.

#### 4.1.2 Construction Emissions

Air emissions associated to construction activity vary based on the project's duration and level of activity; these would be temporary. These emissions occur predominantly in the engine exhaust from the operation of construction equipment and vehicles (e.g. pile drivers, excavators of various sizes, a paver, etc.). In addition, fugitive dust is produced from construction materials staging, soil handling, and un-stabilized land and wind erosion. Finally, minimal levels of VOCs emissions are associated with the application of tank coatings.<sup>89,90</sup>

Construction equipment typically utilized in airport projects comprises both of on-road (i.e., road-licensed) and non-road equipment (i.e., off-road). The former category of vehicles are used for the transport and delivery of supplies, material and equipment to and from the site, and also include construction worker vehicles. The latter categories of equipment are operated on-site for activities such as soil/material handling, site clearing and grubbing. The additional construction emissions associated with the installation of the two new fuel tanks (i.e., painting, lighting, fire protection building, fuel tie-in and piping, utilities, fiber optic communications, stormwater discharge, security fence, sidewalks, and access roads) are minimal and do not change the results of the emissions inventory.

The Airport Construction Emissions Inventory Tool (ACEIT) developed by the Airport Cooperative Research Program (ACRP)<sup>91</sup> was used to estimate construction emissions associated with the Preferred Alternative. ACEIT uses default emission factors derived from EPA-approved emissions models for both non-road construction equipment (i.e., NONROAD) and on-road vehicles (i.e., MOVES). NONROAD provides emission factors for off-road equipment/vehicles (e.g., dozers, tractors, loaders, etc.). In contrast, MOVES is used to develop emission factors for on-road vehicles (e.g., passenger cars, delivery trucks, etc.). Both exhaust and fugitive (e.g., evaporative) emission factors were developed using these models for both non-road construction equipment and on-road vehicles and are incorporated into ACEIT.

Emissions associated with the construction of the two fuel storage tanks during 2017 and the first half of 2018 are presented in Table 4-1. For completeness and disclosure, construction emissions of carbon monoxide (CO), sulfur dioxide (SO<sub>2</sub>), particulate matter with a diameter of 10 microns or less (PM<sub>10</sub>) and a diameter of 2.5 microns or less (PM<sub>2.5</sub>) are reported in addition to the ozone precursors of oxides of nitrogen (NO<sub>x</sub>) and VOCs. For the Preferred Alternative, the total emissions associated with construction activities would be well below the

applicable General Conformity Rule *de minimis* thresholds of 100 tons per year for NOx, and 50 tons per year for VOCs. The General Conformity Rule does not apply. In addition, the new fuel tanks will not require an Air Emissions permit from New York State Department of Environmental Conservation (NYSDEC).

**Table 4-1 Criteria Pollutant Emissions from Construction Activities (tons per year) for the Preferred Alternative**

Construction Year	CO	NOx	SO <sub>2</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>	VOC
2017	7.7	3.5	0.02	0.4	0.2	5.15
2018	4.0	1.2	0.01	0.2	0.1	2.55
<i>De Minimis</i> Threshold	NA	100	NA	NA	NA	50
Exceeds De Minimis Threshold? Yes/No)	--	No	--	--	--	No

Source: EPA, De Minimis Levels, <https://www.epa.gov/general-conformity/de-minimis-emission-levels>, June 2016.

Note: NA = not applicable

JFK is located in an area currently designated by the EPA as a marginal nonattainment area for the 2008 8-hour ozone standard. The operational and construction-related emissions associated with the Preferred Alternative are within (i.e., less than) the applicable General Conformity Rule *de minimis* thresholds for NOx and VOCs (the principal precursors to ozone formation). Therefore, these emissions are shown to comply with the SIP.

Also, based on this analysis, the construction-related greenhouse gas (GHG) emissions from the Preferred Alternative would not exceed the 25,000 metric ton threshold. The Preferred Alternative would not contribute any significant adverse effects to air quality as compared to the No-Action alternative.

The Airport adheres to FAA Advisory Circular 150/5370 for all requirements concerning dust, other particulate matter, and emissions associated with construction on-airport. Emissions from construction activities may be further reduced by employing the following measures:

- Cover of exposed surface areas with pavement or vegetation, as appropriate, in an expeditious manner;
- Reduction of equipment idling times;
- Ensure contractor is knowledgeable of appropriate fugitive dust and equipment exhaust controls;
- Soil stabilization via cover or periodic watering;
- Use of low or zero-emissions equipment; and
- Suspension of construction activities during high-wind conditions.

## 4.2 Climate

On December 18, 2014, the Council on Environmental Quality (CEQ) issued Revised Draft Guidance for Greenhouse Gas Emissions and Climate Change Impacts under the National Environmental Policy Act (NEPA) describing how Federal agencies should address the subject of GHG emissions and climate change in documents prepared pursuant to NEPA. The draft guidance recommends that agencies consider 25,000 metric tons of carbon dioxide (CO<sub>2</sub>) equivalent emissions (measured in metric tons (MT)) on an annual basis as a reference point; a quantitative analysis of greenhouse gas is not recommended for less than that amount. The operation of the Preferred Alternative would not produce GHG emissions, but GHG emissions would be produced during construction activities. The estimated GHG emissions from construction equipment are presented in Table 4-2. The CO<sub>2</sub> equivalent emissions are anticipated to total slightly more than 2,500 MT for the construction period. The Preferred Alternative would not be expected to contribute any significant adverse impacts to climate during construction as compared to the No Action alternative.

**Table 4-2 GHG Emissions from Preferred Alternative Construction Activities  
(metric tons (MT)) per year**

<b>Construction Year</b>	<b>CO<sub>2</sub></b>	<b>CO<sub>2</sub>e</b>

2018	<u>774</u>	<u>776</u>
Total	2,677	2,686

---

## 4.3 Biological Resources (including Fish, Wildlife, and Plants)

This section analyzes the potential impacts of the Preferred Alternative on the existing biological resources identified in Chapter 3, Affected Environment, including ecological communities and vegetation, wildlife, and rare/protected species.

### 4.3.1 Ecological Communities and Vegetation

The Preferred Alternative would result in the redevelopment of the 4.1-acre project site with a fuel tank facility comprised primarily of impervious surfaces. As described in Chapter 3, due to site history as a storage area for stockpiles of recycled roadway millings and sediments, the project area is largely unvegetated, and a surficial layer of these materials remained on the ground surface until Spring 2016 when the bulk of the surface materials were removed. The project area also consisted of a historical subsurface concrete layer that was uncovered and removed in Spring 2016. These disturbed/developed conditions are defined by habitats: Construction/Road Maintenance Spoils, Paved Road/Path and Urban Structure Exterior communities, which are considered by the NYNHP as unranked cultural habitat communities that are distributed throughout New York

State. The surrounding area of the Bulk Fuel Facility (BFF) are developed primarily with impervious and otherwise largely unvegetated surfaces associated with jet fuel facility tanks, roads, and pavement.

Based upon these existing conditions, the project site and surrounding BFF do not support natural or otherwise undisturbed ecological communities or significant vegetative associations. Accordingly, redevelopment of the project area and implementing the Preferred Alternative would not result in the removal of, or adverse effects to, important ecological communities or significant areas of vegetation. The three existing disturbed cultural ecological communities would be removed and replaced primarily with Paved Road/Path, Unpaved Road/Path and Urban Structure Exterior communities associated with the proposed fuel tank installations. As such, following implementation of the Preferred Alternative, the project area would support predominantly developed and largely unvegetated cultural habitats, similar to existing conditions. Based upon the foregoing, no adverse effects to habitats or vegetation are anticipated as a result of the Preferred Alternative as compared to the No Action alternative.

#### 4.3.2 Wildlife

Given the disturbed/developed and largely unvegetated conditions that occur at the project site and surrounding properties of the BFF, these areas do not represent a significant habitat area for wildlife. The observed/expected wildlife species assemblage is comprised primarily of a limited number of birds and mammals adapted to cultural habitats and a high degree of human activity. Further, the project area and the surrounding BFF are terrestrial and therefore, do not support surface waters appropriate as habitat for fish or populations of other aquatic organisms. Based upon these existing conditions, the project area and any resident or transient wildlife species do not represent significant integrated components of a larger ecosystem, including the New York City (NYC) Special Natural Waterfront Area (SNWA) and NYSDEC Significant Coastal Fish and Wildlife Habitat (SCFWH) of the nearby Jamaica Bay estuarine complex or the associated National Park Service (NPS) Jamaica Bay Wildlife Refuge. Following implementation of the Preferred Alternative, it is anticipated that the wildlife species assemblage at the project area would be comprised of a low diversity assemblage of common birds and mammals tolerant of developed conditions and a high degree of human activity, similar to existing conditions at the project site and within the surrounding BFF. Based upon the foregoing, redevelopment of the project site under the Preferred Alternative would not result in adverse effects to wildlife populations or habitat at the project site or the BFF.

With respect to undeveloped wildlife habitats and resident wildlife in the general surrounding area, ground disturbance, removal of existing habitats, and redevelopment associated with the Preferred Alternative would be limited to the disturbed terrestrial habitats of the project area. These disturbed habitats are separated from the marine and wetland habitats located to the north, south and west by the existing highly-developed conditions within the surrounding BFF. Moreover, as detailed in Section 1.4, stormwater generated by the Preferred Alternative would be subject to water quality treatment before being discharged to Bergen Basin under the airport's SPDES Permit (September 27, 2007). Specifically, stormwater from the tank roofs, tank containment systems and the new asphalt access driveway on the north side of the project area would be conveyed to the existing BFF stormwater treatment facility to the northeast of the project area. The treated stormwater would then be discharged to Bergen Basin via Outfall #4. Stormwater from the remainder of the project area, including

gravel areas and the rerouted service roadway (limited usage) on the south side of the tanks outside of the security fence, will either be treated by a new water quality unit before being discharged to Bergen Basin via Outfall #5 or will infiltrate to the subsurface.

A Soil and Groundwater Management Plan (SGWMP) designed to avoid or minimize potential adverse impacts to surface waters and other watershed components would be implemented in association with the Preferred Alternative. As such, no significant adverse stormwater impacts to wildlife or wildlife habitat within Bergen Basin or Jamaica Bay are anticipated. Based upon these factors, no adverse effects are anticipated for the New York City (NYC) Special Natural Waterfront Area (SNWA) and NYSDEC Significant Coastal Fish and Wildlife Habitat (SCFWH) of the Jamaica Bay estuarine complex, or the associated NPS Jamaica Bay Wildlife Refuge, as a result of implementation of the Preferred Alternative.

### **4.3.3 Rare/Protected Species**

As noted in Chapter 3, the U.S. Fish and Wildlife Service (USFWS) Trust Resources Report for the project area includes three marine shorebirds; piping plover, red knot and roseate tern, as well as the vascular plant sandplain gerardia. Suitable habitat for these four species does not exist at the project site or the BFF, and no NYNHP records exist for these species or any New York State-listed wildlife, plants or significant natural communities as occurring at or in the vicinity of the project site.

Potentially suitable habitat for the four aforementioned USFWS Trust Resources Report species exists to the south of the project site, within the Jamaica Bay estuarine complex. Ground disturbance and removal of existing habitats would occur as a result of the Preferred Alternative, but would be limited to the disturbed terrestrial habitats of the project area, which is separated from Jamaica Bay by surrounding facilities of the BFF. Moreover, stormwater generated by the Preferred Alternative would be conveyed to the existing BFF stormwater system, which discharges to the JFK stormwater treatment plant, resulting in no stormwater impacts to wildlife habitat within Jamaica Bay. Accordingly, no adverse effects are anticipated for rare/protected species due to implementation of the Preferred Alternative as compared to the No Action alternative.

---

## **4.4 Coastal Resources**

As summarized in Chapter 3, the Preferred Alternative would be located within the Coastal Zone and therefore, is subject to consistency analyses with New York State Department of the State (NYSDOS) Coastal Management Program (CMP) polices and New York City Waterfront Revitalization Program (NYCWRP) Coastal Policies, as administered by the NYC DCP.

Requests for consistency review were submitted to the two aforementioned agencies (Appendix D). The relevant coastal policies addressed in the two agency consistency review requests include protection of tidal wetlands, avoidance and minimization of adverse impacts to life, structures, and natural resources within floodplains and coastal areas, handling and storage of hazardous materials and solid waste, discharge of pollutants into surface waters, and potential adverse impacts to groundwater.

As described in the two agency requests, the aforementioned consistency analyses have resulted in preliminary determinations that the Preferred Alternative is consistent with all relevant NYSDOS and NYCWRP Coastal Policies. Following their consistency review, the NYSDOS issued a General Concurrence for the Preferred Alternative, dated November 7, 2016. Following their review, the NYC DCP issued an October 11, 2016 determination that the Preferred Alternative is consistent with NYCWRP Coastal Policies.

Based upon the foregoing, no adverse effects to coastal resources are anticipated as a result of the Preferred Alternative.

---

## 4.5 Hazardous Materials, Solid Waste, and Pollution Prevention

The Preferred Alternative will result in direct impacts to locations both inside and outside of the BFF. The impacts inside the BFF will be limited to fuel transmission and stormwater discharge pipelines. The on-going remediation effort within the BFF is discussed in Section 3.4. The fuel pipeline interconnections to the existing fuel line will be handled using the strict protocols outlined in Construction Specification 52 43.13, "Fuel System Pipe, Fittings and Installation."<sup>92</sup> The specifications, in particular, state that a) the active piping will not be cut, tapped or disturbed until the contractor has obtained the necessary written approvals from the Owner and the Fuel System Operator, and, b) the piping will be substantially drained prior to cutting.

Outside of the BFF, the existing hazardous materials trailers would be cleaned of their contents and moved further south and west outside of the newly defined tank area. The trailer contents would be removed by the Port Authority prior to moving the trailers to their new locations.

The geotechnical borings logs from the project area indicate that fill material/dredge spoils, which include trace inclusions of asphalt, coal, concrete, and tar, are present within the proposed project area to terminal depths ranging from 10 to 20 feet below ground service (bgs). This fill material and the associated soils may contain contaminants at concentrations that exceed applicable standards. In addition, based upon an observed depth to water of approximately 9 feet bgs, contaminants associated with the fill material (if present) have the potential to leach into the groundwater. Thus, contaminants may be present in the groundwater beneath the project area at concentrations that exceed applicable standards.

Materials used in the construction of the Preferred Alternative and discarded would be removed by the construction contractor. As previously indicated, the fill material/dredge spoils and groundwater to be disturbed and/or removed as part of the Preferred Alternative may contain contaminants that exceed applicable standards. As such, a SGWMP will be prepared in association with the proposed activities. The SGWMP will outline procedures for the storage and characterization of soils and groundwater which will be removed during the proposed activities. In the event that soils and/or groundwater are determined to contain concentrations above applicable standards, the impacted materials would be properly removed from the project site and disposed at

---

92 Argus. 2017 (January 20). Section 33 52 43.13 Fuel System Pipe, Fittings and Installation. John F. Kennedy International Airport BFF Jet Fuel Tank Nos. 1 and 2, Issued for TAA Review, Argus Project 15107.00.

an appropriately-licensed disposal facility in accordance with applicable regulations. In addition, the SGWMP will discuss the coordination of a Long Island Well Permit, if this permit is deemed necessary in order to facilitate dewatering activities.

The No Action alternative would not disturb this ground surface and therefore, its implementation would not require further subsurface testing.

---

## **4.6 Water Resources (including Wetlands, Surface Waters, Floodplains, and Groundwater)**

As summarized in Chapter 3, the water resources that occur at or in the vicinity of the project area include wetlands, surface waters, floodplains and groundwater, which function together as integrated components of the overall watershed, which includes the project area. Potential impacts of the Preferred Alternative on the four resource categories are described below as compared to the No Action alternative.

### **4.6.1 Wetlands/Surface Waters**

As wetlands or surface waters do not occur at or adjacent to the project area, no draining, filling or other direct impacts to such features would occur due to the Preferred Alternative, nor is there any potential for the Preferred Alternative to encroach on or impact any designated wetlands or surface waters. Moreover, as detailed in Section 1.4 and 4.3.2, stormwater generated by the Preferred Alternative would be subject to water quality treatment before being discharged to Bergen Basin under the airport's SPDES Permit (September 27, 2007). Stormwater would be discharged to both Outfalls #4 and #5 or will infiltrate to the subsurface. As a result, no significant adverse effects to water quality within Bergen Basin or Jamaica Bay are anticipated as a result of the Preferred Alternative as compared to the No Action alternative, particularly since the stormwater within the project area is untreated under existing conditions.

As summarized in Chapter 3, the marine surface waters of Bergen Basin and Jamaica Bay, located to the north, west and south of the project area and the BFF are regulated by the U.S. Army Corps of Engineers (USACE) as waters of the U.S., pursuant to Sections 401 and 404 of the Clean Water Act (CWA). A USACE permit would be required for the direct impact to waters of the U.S. (e.g., draining, filling, dredging, discharges, etc.). As no adverse impacts are proposed as part of the Preferred Alternative as compared to the No Action alternative, a USACE permit would not be required for the Preferred Alternative.

Bergen Basin and Jamaica Bay are also regulated as tidal wetlands by the NYSDEC, which regulates and requires permits for many activities within tidal wetlands. The NYSDEC's tidal wetland jurisdiction also extends up to 150 feet landward of tidal wetlands located within NYC, however in some cases the NYSDEC's jurisdiction is less than 150 feet. Such exceptions include situations where the 10-foot elevation contour above mean sea level (amsl) occurs seaward of the 150-foot limit, or where the seaward edge of existing functional structures that were created on or before August 20, 1977 (e.g., bulkheads, rip-rap shorelines or other hardened shoreline structures, paved

roads and parking lots, sidewalks, buildings, etc.). Therefore, it appears that the limits of the NYSDEC's tidal wetland jurisdiction may be limited by the rip-rap shoreline along Bergen Basin, the seaward edge of the BFF perimeter roadway or the 10-foot amsl contour, subject to confirmation by the NYSDEC. If confirmed, ground disturbance associated with the Preferred Alternative would be located beyond the NYSDEC's jurisdiction, and a tidal wetlands permit would not be required. However, it is recommended that a Determination of No Jurisdiction confirming the Preferred Alternative is not subject to tidal wetland permitting be obtained from the NYSDEC prior to construction.

#### 4.6.2 Floodplains

As summarized in Chapter 3, the FEMA Flood Insurance Rate Maps for the project site and surrounding area indicates that the project site is located within the 500-year floodplain. No portions of the project area are located within the 100-year floodplain. Accordingly, no significant adverse impacts to floodplains are anticipated as compared to the No Action alternative, and a floodplain assessment of the Preferred Alternative pursuant to EO 11988 and FAA Order 1050.1F would not be required.

#### 4.6.3 Groundwater

As summarized in Chapter 3, depth to groundwater beneath the project site is approximately 9 feet bgs. As the project area is comprised primarily of pervious surfaces that are not connected to the existing stormwater system, under existing conditions stormwater infiltrates to the subsurface and the underlying groundwater table over time. Due to tidal influence to the shallow groundwater table beneath the project site, the wetlands/surface waters of Bergen Basin and the Jamaica Bay estuarine complex are therefore also subject to stormwater influence. As described in Section 3.3.5, pursuant to the FAA Guidance, water resources function together as integrated components of a watershed. As such, disruption of any single component of a watershed has the potential to result in adverse effects to the functionality of other components within the system. Accordingly, any potential adverse effects to the quantity or quality of stormwater within the project area has the potential to adversely affect groundwater, as well as the wetland/surface water resources located adjacent to the BFF.

As detailed previously, under existing conditions, stormwater is untreated and infiltrates to the the underlying groundwater table beneath the project area. Under the Preferred Alternative, the majority of stormwater within the project area would be conveyed to the existing BFF treatment facility or a new water quality unit before being discharged to Bergen Basin via Outfalls #4 and #5 under the airport's SPDES Permit. Similar to existing conditions, some stormwater will infiltrate to the subsurface. The surface soils, though fill, have a sand matrix and the stormwater would disperse quickly into the matrix. Significantly, a soil and water management plan designed to avoid or minimize potential adverse impacts to the watershed components would be implemented in association with the Preferred Alternative. As a result, no significant adverse effects to groundwater quality, particularly since all stormwater within the project area would continue to be be untreated and infiltrate to the underlying groundwater table under the No Action Alternative.

## 4.7 Cumulative Impacts

The CEQ NEPA regulations (40 CFR 1508.7) define a cumulative impact as,

"...the impact on the environment, which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency, Federal or non-Federal, or person undertakes such other actions. Cumulative impacts can result from individually minor, but collectively significant, actions taking place over a period of time."

This cumulative impact analysis was conducted to comply with the intent of FAA Order 1050.1F, DOT Order 5610.1C, and the CEQ guidance.

The construction schedule of the Preferred Alternative, late 2016 to mid-2018, would overlap with the construction of other projects at JFK. Cumulative impacts are not anticipated due to the implementation of the Preferred Alternative compared to the No Action alternative, as the minor and temporary impacts resulting from the proposed activities would be limited to the Preferred Alternative's direct impact areas, all of which would occur on previously-disturbed land, fill soils, paved, or developed areas.

The Port Authority of New York and New Jersey (Port Authority) categorizes its current and future projects at JFK into four planning sectors: airside, Runway Safety Area (RSA) improvements, landside-Central Terminal Area (CTA), and landside-perimeter. The Preferred Alternative would be implemented on land located to the north of the CTA and within the perimeter of the Airport. No major projects have been implemented in the landside-perimeter sector since the completions of 150th Avenue Rehabilitation and Perimeter Strengthening projects in 2009.<sup>93</sup>

Outside of the project area, four current or proposed projects are listed for the airside and landside-CTA sectors. Within the airside sector, only one project is expected to be in construction in 2016: Runway 4R-22L Rehabilitation Project. The landside-CTA sector has only three projects that will be underway in the 2016-2018 timeframe. These projects, with their construction periods noted, are 1) Building 144 Redevelopment (to begin in 2018), 2) Demolition of Hangar 17 and Building 213 (begun in 2016), and 3) North Cargo Area Redevelopment (2016-2018). These four airside and landside-CTA projects in the project construction period are briefly characterized.

- **Runway 4R-22L Rehabilitation Project (2016-2018).** This project includes the mill and overlay of the full 8,400 foot length of Runway 4R-22L to maintain a good state of repair. Also included as part of the project is the rehabilitation of Taxiways E and J, and the potential rehabilitation and improvement of Taxiways F and H. The Port Authority completed the NEPA process for this project in early 2017. Construction began in February 2017. The following emissions inventory was developed for the environmental analysis for the project, which demonstrates the project results in emissions below de minimis threshold.

<i>de minimis</i> Threshold	100	50	100	100	100	100

Source: Landrum & Brown Analysis, 2011.

Total emissions may not sum exactly due to rounding.

- **Building 144 Redevelopment (2018).** Building 144 is the old Ramada Hotel. The building is not currently in use. The project involves the modification of the building’s footprint either through expansion or demolition of part of the building. There would be no increase in building height. Work on this project is not anticipated prior to 2018.
- **North Cargo Area Redevelopment (2017-2020).** This project would entail demolishing existing Buildings 260/261 and the construction of a new 300,000 square-foot cargo facility, with a possible 150,000 square-foot addition. The Port Authority expects to initiate the NEPA process in late 2017, with demolition starting in early 2018, depending on lease negotiations. It is currently anticipated that construction would be substantially complete by first quarter 2020.
- **TWA Flight Center Hotel (2016).** This project includes the rehabilitation, restoration, and repurposing of the historic TWA Flight Center as part of a hotel in association with the construction of two new guest room buildings to the sides of the TWA Flight Center. This project entails demolishing non-historic elements on the project site, but the preservation of the TWA Flight Center (designed by Eero Saarinen and opened in 1962). Please note that the combined air emissions from construction of the two projects will not exceed *de minimis* levels, even when combined with the potential emissions from the 4R/22L resurfacing. The following emissions inventory was developed for the environmental analysis for the project, which demonstrates the project results in emissions below *de minimis* threshold.

Table 4-4 TWA Flight Center Hotel Construction Emissions Inventory

Construction Year	Construction Year Emissionsw (tons per year)				
	VOC	NOx	CO	PM <sub>2.5</sub>	SOx
2016	1.1	14.5	10.8	0.8	0.03
2017	0.9	11.5	6.8	0.7	0.02
2018	0.23	3.5	1.0	0.2	0.004
<i>de minimis</i> Level	50	100	100	100	100

Sources: EPA NONROAD2008a model; MOVES14

Note: (1) The last year of proposed construction includes only a few months of activity.

A comparison of the Preferred Alternative for this project, Runway 4R-22L, and the TWA Flight Center indicates that the air quality *de minimis* standard is not exceeded.

**Table 4-5 Criteria Pollutant Emissions from Construction Activities (tons per year) for the Preferred Alternative**

Construction Year	CO	NO <sub>x</sub>	SO <sub>2</sub>	PM <sub>10</sub>	PM <sub>2.5</sub>	VOC
2014 <sup>a</sup>	0.73	0.98	0.01	0.04	0.04	0.41
2015 <sup>a</sup>	0.90	1.19	0.02	0.05	0.05	0.50
2016 <sup>b</sup>	10.80	14.50	0.03	0.80	0.80	1.10
2017 <sup>b, c</sup>	14.50	15.00	0.04	0.40	0.90	5.70
2018 <sup>b, c</sup>	5.00	4.70	0.01	0.20	0.30	2.43
<i>De Minimis Threshold</i>	NA	100	NA	NA	NA	50
Exceeds <i>De Minimis</i> Threshold? (Yes/No)	--	No	--	--	--	No

- a Air emissions associated with 4L-22R Project construction activities.
- b Air emissions associated with TWA Flight Center Hotel Project construction activities.
- c Air emissions associated with Jet Fuel Tanks Project construction activities.

Based on this list, it is anticipated that all of the projects may result in new disturbance or direct impacts to the Airport’s resources. The disturbance would result from demolition and excavation. All of the projects would result in direct impacts to existing structures or buildings outside of the Preferred Alternative’s footprint. All of the projects, however, are within previously developed locations and no direct impacts to significant natural or cultural resources would likely result.

## 4.8 Adverse Impacts That Cannot Be Avoided if the Preferred Alternative is Implemented

Based on this analysis, there would be no significant adverse impacts from the implementation of the Preferred Alternative as compared to the No Action alternative.

## 4.9 Conclusion

In conclusion, there are no permanent, significant, adverse impacts on resources as a result of the Preferred Alternative when compared to the No Action alternative. Construction would be limited to areas that have been previously developed. There are no known sensitive biological resources, habitat, or species located within or adjacent to the Preferred Alternative’s alignment (Appendix C). A Phase IA cultural resources assessment (Appendix B) concluded that there was little likelihood that significant archaeological resources were present beneath the fill soils that form the project area’s ground surface. The NY SHPO accepted the recommendation on August 8, 2016, and commented that the proposed undertaking would have no effect on historic properties.

The soil composition of the project area, and those areas of the existing BFF that would be impacted by proposed facility improvements, is fill deposits that originated as dredge spoil. Soil and groundwater would be

# THE PORT AUTHORITY OF NEW YORK & NEW JERSEY

## John F. Kennedy International Airport Aircraft Fuel Tank Installation FINAL Environmental Assessment

managed, including the possibility of testing for regulated substances, as part of a Soil and Water Management Plan to be developed with the General Contractor for the project.

Under the terms of General Condition #5 of JFK's Major Oil Storage Facility (MOSF) permit, NYSDEC approval of major additions and changes to the aviation fuel system is required. The proponent discussed the project with NYSDEC on August 1, 2017 to determine the requirements for the preconstruction submittal.<sup>94</sup> The preconstruction submittal was made by the proponent on August 4, 2017 (Appendix J). By letter dated September 8, 2017, the NYSDEC stated "the Department has completed its review and has determined that the Project is consistent with the Department's regulations (6 NYCRR Part 613). Accordingly, the Department approves the submitted plans."

See Table 4-6 for a full summary of impacts.

While the Preferred Alternative would not result in significant adverse impacts to any resources that require mitigation, the following measures are recommended to further reduce unavoidable impacts: further reductions of emissions could be achieved by limiting equipment idling times and implementation of fugitive dust and equipment exhaust controls; and further subsurface investigation may be implemented with the procedures to be outlined in the Soil and Groundwater Management Plan, which would be prepared prior to construction, for review by the Port Authority.

In addition, it is recommended that a Determination of No Jurisdiction confirming the Preferred Alternative is not subject to tidal wetland permitting be obtained from the NYSDEC.

---

<sup>94</sup> Personal communication, Paul Johnke, Argus Consulting Engineers, P.C., to Leszak Zielinski, NYSDEC, August 1, 2017.

Aircraft Fuel Tank Installation  
FINAL Environmental Assessment

Table 4-6 Summary of Impacts of the Preferred Alternative

Environmental Impact Category*	Potential Environmental Impacts	Recommended Mitigation Measures	Notes
Air Quality	Not Affected	Limit equipment idling times & implement fugitive dust & equipment exhaust controls	
Biological Resources (including fish, wildlife, & plants)	Not Affected	N/A	
Climate	Not Affected	N/A	
Coastal Resources	Not Affected	None; Preferred Alternative is consistent with NYS DOS & NYC coastal policies	No adverse effect related to Preferred Alternative concurrence received from NYC Department of City Planning (DCP) October 11, 2016 & from NYS Department of State November 7, 2016
Department of Transportation Act Section 4(f)	Not Applicable	N/A	
Farmlands	Not Applicable	N/A	
Hazardous Materials, Solid Waste, & Pollution Prevention	Fill material & groundwater disturbed or removed may contain contaminants that exceed applicable standards	Soil and groundwater managed, including potential testing for regulated substances, as part of a Soil & Water Management Plan	
Historic, Architectural, Archaeological, & Cultural Resources	Not Applicable	N/A	NY SHPO determined no effect on historic properties (August 8, 2016)
Land Use	Not Applicable	N/A	
Natural Resources & Energy Supply	Not Applicable	N/A	
Noise & Noise-Compatible Land Use	Not Applicable	N/A	
Socioeconomics, EJ and Children's Environmental Health & Safety Risks	Not Applicable	N/A	
Visual Effects (Light Emissions & Visual Resources/ Visual Character)	Not Applicable	N/A	
Water Resources (including Wetlands, Floodplains, Surface Waters, Groundwater, & Wild and Scenic Rivers)	Not Affected	A Determination of No Jurisdiction to confirm the Preferred Alternative is not subject to tidal wetland permitting is recommended once the plans are finalized.

## 5 Public Involvement

---

### 5.1 Agency Coordination

Applicable correspondence is provided in Appendices C, D, and E. Agency coordination was initiated through letter correspondence with the following agencies:

- New York City Department of City Planning, New York City Waterfront and Open Space Division
- New York State Department of Environmental Conservation, New York Natural Heritage Program
- New York State Department of State, Division of Coastal Resources
- New York State Office of Parks, Recreation, and Historic Preservation

---

### 5.2 Public Outreach

The Port Authority of New York and New Jersey (Port Authority) published a Notice of Availability of the Draft Environmental Assessment (EA), providing the public an opportunity to review and comment on the Aircraft Fuel Tank Installation project at John F. Kennedy International Airport (JFK). Notice was published in daily papers (*Daily News* (Queens), *Greek National Herald*, *Newsday*, and *Sing Tao Daily*) and weekly papers (*El Especialito*, *Queens Chronicle*, *Queens Courier*, *Queens Gazette*, *Queens Ledger*, *Queens Times Ledger*, and *Queens Tribune*). It was also published on the Airport's website <http://www.panynj.gov/about/studies-reports.html> (Appendix K).

The Draft EA was made available for review from December 8, 2017, to January 8, 2018.

The following information was included in the notice:

**THE PORT AUTHORITY OF NEW YORK & NEW JERSEY  
NOTICE OF AVAILABILITY and REQUEST FOR COMMENT  
Draft Environmental Assessment  
Aircraft Fuel Tank Installation  
John F. Kennedy International Airport, Queens, New York**

**THE PORT AUTHORITY**  
OF NEW YORK & NEW JERSEY

**John F. Kennedy International Airport  
Aircraft Fuel Tank Installation  
FINAL Environmental Assessment**

In accordance with the National Environmental Policy Act of 1969 (NEPA) notice was given that copies of a Draft Environmental Assessment (EA) for the proposed Aircraft Fuel Tank Installation Project at John F. Kennedy International Airport was available for public review and comment at the following locations:

The Port Authority of NY & NJ  
John F. Kennedy International Airport  
Building 14/PA Administration Building  
3rd Floor  
Queens, NY 11430  
Attn: Jim Steven  
Hours: 8:00 am to 4:00 pm

The Port Authority of NY & NJ  
Aviation Department  
4 World Trade Center/150 Greenwich Street  
18th Floor  
New York, NY 10007  
Attn: Kathryn Lamond  
Hours: 9:00 am to 5:00 pm

The Draft EA document for this project was available at these locations until the close of the comment period, which was 30 days after the publication date of January 8, 2018. In addition, a copy of this document was available for viewing online at: <http://www.panynj.gov/about/studies-reports.html>. No comments were received during the review period.

The Final EA document responds to all of the requirements of the Federal Aviation Administration (FAA) for preparation of an Environmental Assessment (EA) pursuant to NEPA, and also documents compliance with Federal Executive Orders 11988 and 13690: Floodplain Management.

**Consultation Wizard - Step 2: Project Overview**

**VHB Project #29621**

Item	Description
Project Name	John F. Kennedy International Airport (JFK), Aircraft Fuel Tank Installation Environmental Assessment, Queens County, New York
Project Description	<p>This project is located adjacent to the existing JFK Bulk Fuel Farm (BFF) in the northwest section of the Airport, adjacent to Bergen Basin (see Attachment 1, Figures C-1 and C-2; Photographs 1-6). The project includes the permanent installation of two fuel tanks, each 80,240 barrels (bbl) (3,412,080 US gallons) in size, two new jet fuel tank fill and suction lines, utility connections to existing panels and sources, a fire foam system, storm/containment discharge (storm/CD) interconnects to BFF existing system, new fencing, and a new access road segment (Figure 3). The existing boundary of the BFF will be expanded to include the location of the two new tanks and their associated facilities/connections. The expansion necessitates a change in the Airport Layout Plan (ALP), which requires Federal Aviation Administration (FAA) approval. The FAA is the lead agency.</p>
Will this project involve ground disturbance?	<p>Yes - the project will disturb approximately <math>\pm</math> 2.74 acres of land. Various elements of the project will disturb to depths ranging between 4 feet (ft) below grade surface (bgs) for utility trenches to approximately 80 ft below surface, which will result from the emplacement of steel pilings beneath the two proposed fuel tanks. There will be approximately 61 pilings beneath each tank and these pilings be located beneath the approximately 7-ft thick aggregate reinforced concrete mat foundation for each tank. The steel tanks will rest on ring wall curbs which, in turn, will be set on a reinforced concrete mat foundation which, in turn, will be set on the pilings.</p>
<p>Has there been previous ground disturbance on this property?</p> <p><i>(Note: Only displayed if the project involves ground disturbance)</i></p>	<p>Yes. As described in Attachment 1, the two new tanks will rest on historically deposited dredge spoil classified by USDA NRCS as Bigapple fine sand (BiA) (Attachment 1, Figure C-9).</p>
If so, briefly describe?	<p>There are two types of prior disturbance: 1) historic fill using dredge spoil and 2) post-fill use (Figures C-4 through C-8).</p>

<p><i>(Note: Only displayed if there was previous ground disturbance within the project area)</i></p>	<p>NOAA maps of the project location indicate that the project site was marshland until at least 1899. Between 1899 and 1929, a series of canals were constructed and controlled drainage and concomitant fill slowly resulted in the creation of new land along the north margin of Jamaica Bay. The depth of that fill is presumed to be approximately 10 feet based on 0 elevation above mean sea level (AMSL) in 1899 and today's 10-foot AMSL. The depth was generally confirmed by geotechnical bores which identified fill between at depths between 10 and 20 feet below the existing elevation of +20 ft. Between 1954 and 1957, the existing BFF was begun. Based on aerial photographs, it appears the much of the existing, new ground was at least superficially recontoured during that period [See Attachment 1 for additional detail].</p>
<p>Does the project area have one or more buildings present?</p>	<p>There is one existing building (Building 242) involved with the project. It is located at the east end of the proposed electrical duct bank trench (see Figure C-3, Photograph 4). This existing building will house the new electrical panel that will service the new electrical building at the west end of the proposed electrical duct bank trench (see Figure 3).</p>
<p>Primary Agency</p>	<p>Federal Aviation Administration (FAA)</p>
<p>Type of Permit/Approval (Optional)</p>	<p>ALP approval</p>
<p>Reference Number (Optional)</p>	<p>Not applicable</p>
<p>Secondary Agencies (Optional)</p>	<p>NYS DEC, Determination of No Jurisdiction; NYS DOS Federal Consistency Assessment; NYC Department of City Planning Waterfront Revitalization Program Consistency Assessment,</p>

**Consultation Wizard - Step 3: Project Location**

**VHB Project #29621**

**Address:** Not applicable

**Intersection:** Not applicable

**Coordinates:** No coordinates entered. The polygon outlines the new tank area. That polygon, however does not show the location of the jet fuel fill lines from Pier 3 or Pier #4. Further, the polygon does not plot the locations of the stormwater/containment drainage (storm/CD) and electrical duct bank (EDB) lines outside of the new tank area perimeter fence. The jet fuel fill, the storm/CD, and the EDB lines outside of the new tank area all are within the existing Bulk Fuel Farm (BFF).

## Memorandum

Project #: 29621.00

From: Carol S. Weed, MA (RPA)

Re: Phase IA Cultural Resources Assessment  
The Port Authority of New York & New Jersey  
John F. Kennedy International Airport  
Aircraft Fuel Tank Installation Environmental Assessment,  
Queens County, New York

This memorandum summarizes the results of the New York Office of Parks, Recreation, and Historic Preservation (NY SHPO) Cultural Resources Information System (CRIS) site file checks conducted initially in October 2015, and refreshed in May 2016, and on-line map research using the ESRI USGS Historical Topographic Map Collection, the Map Collection of the New York City Public Library, the National Oceanic and Atmospheric Administration (NOAA) Historical Chart Section, and the USDA Soil Conservation Service Web Soil Survey in May and June 2016. The memorandum concludes with a recommendation for no further archaeological investigation because of setting origin and prior disturbance, and no further consideration of buildings or structures because of the vernacular nature of the building.

The project is located within the northwest sector of John F. Kennedy International Airport (JFK, the Airport) immediately adjacent to the existing Bulk Fuel Farm (BFF; Figures C-1 and C-2, Photographs 1-5). The project includes the permanent installation of two fuel tanks, each 81,240 barrels (bbl) (3,412,080 US gallons) in size, new jet fuel tank fill and suction lines, utility interconnects to existing panels and sources, a fire foam protection system, stormwater discharge interconnect to the existing BFF stormwater discharge system, new fencing, and a new access road segment. As currently proposed, the project will disturb approximately 3 acres of land and disturbance will range in depth from 4 feet (ft) below grade surface (bgs) for utility trenches to approximately 80 ft bgs for steel pilings. The detail of the project layout is presented on Figure C-3.

The existing boundary of the BFF will be expanded to include the location of the two new tanks and associated facilities/connections. The expansion necessitates a change in the Airport Layout Plan (ALP), which requires Federal Aviation Administration (FAA) approval. For this reason, the proposed action must be reviewed under the National Environmental Protection Act (NEPA) and the FAA has determined that the project requires an Environmental Assessment (EA). The construction of the fuel tanks and their associated infrastructure is being done by an airline fuel consortium. The facilities long-term management will be conducted by the Port Authority of New York & New Jersey which has oversight over JFK.

### **Background and Literature Review**

One existing building will be disturbed/modified due to implementation of the proposed project. The building is designated as Building 242 by the Port Authority of New York & New Jersey (PANYNJ; Photograph 6). An electrical duct bank will connect to an existing electrical panel either within the building or immediately adjacent to it. No other buildings will be affected by the project. An existing structure is present. It is a concrete slab of unknown origins that was found approximately 6-inches below the surface when millings piles were removed by the PANYNJ earlier this spring (see Photograph 1). The slab covers approximately 66,000 square feet (sq ft) within the proposed tank area. The concrete slab was removed by the PANYNJ in anticipation of releasing the project site for the design and construction of the two fuel tanks, their containments, the access

Ref: 29621.00  
July 13, 2016  
Page 2

## Memorandum

road realignment and various fuel fill, fuel suction, utility (electrical duct bank, water, fiber optic) and safety (fire foam) elements.

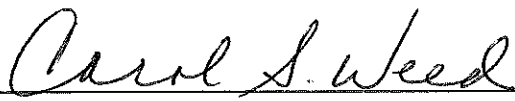

No previous archaeological survey has been done of the project footprint, which includes the project site within the proposed fence, the electrical duct bank that extends to the east outside of the new fence line, and the fuel fill line that extends north-to-south from Pier 3, Stations #3 & #4 down an existing tank farm road (see Figure C-2). The project area lies within two Archaeological Sensitivity Areas as defined by NY SHPO. Archaeological Site 4534, a Native American resource, is plotted as an archaeological area to the south. Its northern boundary is approximately 340 ft south of the project area. The site was originally recorded as by Arthur Parker as ACP QUNS-8 and is described in his 1920 publication as "village site and shell heap near Hook Creek station on the road to Far Rockaway."<sup>1</sup> Site 4534 was originally identified by Arthur Parker in the early 1900s prior to the concerted effort to fill the northern Bay marshes.

Three sites are present north of the project location. These are New York State Museum (NYSM) Site 8431, and NY SHPO Unique Site Numbers (USNs) 08101.000090 and 08101.000091. NYSM 8431 is a Native American site as are both of the other two. These three sites are located between approximately 2,900 ft to 4,800 ft north and northwest of the project area.

Archaeological sensitivity as it applies to the project site is somewhat moot. The historic maps of the area clearly show the slow progression of bay filling that began in the early 1900s that continued until at least 1954 (Figures C-4 through C-7). By 1957 (Figure C-8), the current outline of Bergen Basin, to the west of the project location, and JFK was in place. The current soil map of covering the project site and near vicinity indicates that the project is site on Bigapple fine sand, 0 to 3 percent slopes (BiA) soil, which originated as sandy dredge spoil.<sup>2</sup> The BiA soil description indicates that the upper 79 inches of the soil column is fine sand and that depth to the water table ranges from 59 to 79 inches below existing ground surface. If addition dredge spoil underlies the upper soil package is unknown. None of the historic maps indicate that the project location is atop one of the bay marsh islands that once dotted the now filled marshes along Jamaica Bay's northern periphery.

### Recommendations

The subject property is located east of Bergen Basin in the northwest quadrant of JFK. It is located on made land generated from sandy dredge spoil. The depth of impact from the project could be as great as 80 feet bgs, but that impact will result from pilings. There is no indication based on known site locations that intact archaeological deposits underlay the fill as the available map coverage of the locale indicates it was open marsh without associated dry land patch. There seems to be little likelihood that intact, significant archaeological deposits would be disturbed by the proposed action. No further archaeological work is recommended for the project.

**Subject:** SHPO Initial Submission Accepted for Project: 16PR04834

This message confirms that initial submission H7IOBHR56JG4 has been accepted by the New York State Historic Preservation Office (SHPO) as new project 16PR04834: John F. Kennedy International Airport (JFK), Aircraft Fuel Tank Installation Environmental Assessment, Queens County, New York . Please refer to this new project number in future correspondence with SHPO.

You may view information about this project and New York State's historic resources by visiting the Cultural Resource Information System (CRIS) at <https://cris.parks.ny.gov>. If you have any questions about CRIS, please contact CRIS Help at [crishelp@parks.ny.gov](mailto:crishelp@parks.ny.gov). For any other questions, please call SHPO at 518-237-8643.

Sincerely,  
New York State Historic Preservation Office

---

Please note that this email does NOT require any action on your part at this time. You are receiving this email as part of an online service recently launched by the New York State Office of Parks, Recreation and Historic Preservation's Division for Historic Preservation, also known as the New York State Historic Preservation Office (SHPO). This new Cultural Resource Information System (CRIS) is an advanced Geographic Information System program that provides access to New York State's vast historic and cultural resource databases and digitized paper records. In addition, the new system serves as an interactive portal for agencies, municipalities and the public who use or require consultation with our agency on historic preservation programs or issues.

Our email to you is in direct response to material that was submitted to our office regarding a project for which you were identified as a contact. Such projects include actions that are reviewable by our agency under the National Historic Preservation Act of 1966 (Section 106), the New York State Historic Preservation Act (Section 14.09 NYSPRHPL), or the State Environmental Quality Review Act (SEQRA).

If you did not enter this project directly into CRIS, you are receiving this notification as our office or another project contact has entered it into our system. You will receive future correspondence for this submission via email.

Re: FAA  
John F. Kennedy International Airport (JFK), Aircraft Fuel Tank Installation Environmental  
Assessment, Queens County, New York  
16PR04834

Dear Ms. Weed:

Thank you for requesting the comments of the State Historic Preservation Office (SHPO). We have reviewed the project in accordance with Section 106 of the National Historic Preservation Act of 1966. These comments are those of the SHPO and relate only to Historic/Cultural resources. They do not include potential environmental impacts to New York State Parkland that may be involved in or near your project. Such impacts must be considered as part of the environmental review of the project pursuant to the National Environmental Policy Act and/or the State Environmental Quality Review Act (New York Environmental Conservation Law Article 8).

Based upon this review, the New York SHPO has determined that no historic properties will be affected by this undertaking.

If further correspondence is required regarding this project, please be sure to refer to the OPRHP Project Review (PR) number noted above.

Sincerely,

Ruth L. Pierpont

Deputy Commissioner for Historic Preservation

Re: NYNHP Records Request  
Jet Fuel Storage Tank Installation Project  
John F. Kennedy International Airport - Bulk Fuel Farm  
Queens County, New York

Dear Ms. Chaloux:

VHB Engineering, Surveying and Landscape Architecture, P.C. (VHB) has been retained by Argus Consulting, Inc. to prepare an Environmental Assessment (EA) for the installation of two 80,000 barrel jet fuel storage tanks and associated infrastructure (i.e., fuel lines, utilities, access road and perimeter fencing) within the John F. Kennedy International Airport (JFK) Bulk Fuel Farm (BFF) facility. The BFF facility is situated at the western portion of the JFK property and is densely developed with multiple fuel storage tanks, fuel lines, facility buildings, and paved roads. The 3± acre project area is comprised of recently disturbed and primarily unvegetated, unpaved earth surfaces.

The Federal Aviation Administration (FAA) is acting as the lead agency for the EA. In order to ensure that the EA will address all significant issues, we are requesting copies of any New York Natural Heritage Program records for rare plants, animals (including records of known, occupied northern long-eared bat [*Myotis septentrionalis*] roosts or hibernacula), natural communities or significant wildlife habitats at or in the vicinity of the project area, as depicted on the enclosed USGS Topographic Map excerpt (Jamaica, New York Quadrangle).

Re: Jet Fuel Storage Tank Installation Project at JFK International Airport Bulk Fuel Farm  
Town/City: City of New York                      County: Queens

Dear David Kennedy:

In response to your recent request, we have reviewed the New York Natural Heritage Program database with respect to the above project.

We have no records of concern of rare or state-listed animals or plants, or significant natural communities at your site or in its immediate vicinity.

The absence of data does not necessarily mean that rare or state-listed species, significant natural communities, or other significant habitats do not exist on or adjacent to the proposed site. Rather, our files currently do not contain information that indicates their presence. For most sites, comprehensive field surveys have not been conducted. We cannot provide a definitive statement on the presence or absence of all rare or state-listed species or significant natural communities. Depending on the nature of the project and the conditions at the project site, further information from on-site surveys or other resources may be required to fully assess impacts on biological resources.

This response applies only to known occurrences of rare or state-listed animals and plants, significant natural communities, and other significant habitats maintained in the Natural Heritage Database. Your project may require additional review or permits; for information regarding other permits that may be required under state law for regulated areas or activities (e.g., regulated wetlands), please contact the NYS DEC Region 2 Office, Division of Environmental Permits, as listed at [www.dec.ny.gov/about/39381.html](http://www.dec.ny.gov/about/39381.html).

Sincerely,

A handwritten signature in black ink that reads "Nick Conrad".

Nicholas Conrad

## U.S. Fish & Wildlife Service Contact Information

Trust resources in this location are managed by:

**Long Island Ecological Services Field Office**

340 Smith Road  
Shirley, NY 11967  
(631) 286-0485

## Endangered Species

Proposed, candidate, threatened, and endangered species are managed by the [Endangered Species Program](#) of the U.S. Fish & Wildlife Service.

**This USFWS trust resource report is for informational purposes only and should not be used for planning or analyzing project level impacts.**

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list from the Regulatory Documents section.

[Section 7](#) of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency.

**A letter from the local office and a species list which fulfills this requirement can only be obtained by requesting an official species list either from the Regulatory Documents section in IPaC or from the local field office directly.**

The list of species below are those that may occur or could potentially be affected by activities in this location:

### Birds

**Piping Plover** *Charadrius melodus* Threatened

CRITICAL HABITAT

There is **final** critical habitat designated for this species.

## Flowering Plants

**Seabeach Amaranth** *Amaranthus pumilus*

Threatened

### CRITICAL HABITAT

**No critical habitat** has been designated for this species.

[http://ecos.fws.gov/tess\\_public/profile/speciesProfile.action?sPCODE=Q2MZ](http://ecos.fws.gov/tess_public/profile/speciesProfile.action?sPCODE=Q2MZ)

## Critical Habitats

**There are no critical habitats in this location**

## Migratory Birds

Birds are protected by the [Migratory Bird Treaty Act](#) and the [Bald and Golden Eagle Protection Act](#).

Any activity that results in the take of migratory birds or eagles is prohibited unless authorized by the U.S. Fish & Wildlife Service.<sup>[1]</sup> There are no provisions for allowing the take of migratory birds that are unintentionally killed or injured.

Any person or organization who plans or conducts activities that may result in the take of migratory birds is responsible for complying with the appropriate regulations and implementing appropriate conservation measures.

# Wetlands in the National Wetlands Inventory

Impacts to [NWI wetlands](#) and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local [U.S. Army Corps of Engineers District](#).

## DATA LIMITATIONS

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

## DATA EXCLUSIONS

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tubercid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

## DATA PRECAUTIONS

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

**There are no wetlands in this location**

## D. Coastal Zone Correspondence and Permit Applications

**THE PORT AUTHORITY**  
OF NEW YORK & NEW JERSEY

John F. Kennedy International Airport  
Aircraft Fuel Tank Installation  
FINAL Environmental Assessment

This Page Intentionally Left Blank

**UPS OVERNIGHT**

September 29, 2016

Jeffrey Zappieri  
Supervisor, Consistency Review Unit  
New York State Department of State  
Division of Coastal Resources  
1 Commerce Plaza, Suite 1010  
Albany, NY 12231-0001

**SUBJECT: JOHN F. KENNEDY INTERNATIONAL AIRPORT: JET FUEL STORAGE  
TANK INSTALLATION**

Dear Mr. Zappieri:

The Port Authority of NY & NJ (Port Authority) is proposing to install two above ground jet fuel storage tanks at the John F. Kennedy International Airport (JFK), which is located near Jamaica Bay at Jamaica, Borough of Queens, Queens County, New York. The purpose of the project is to provide additional on-site jet fuel storage so that the airport has adequate storage and reserve capacity to meet current and forecasted demand, particularly during peak usage periods.

Specifically, the project would involve installation of two 3,412,080 gallon above ground storage tanks, with associated fuel lines, utilities, fire protection system, paved access road, and perimeter fencing. The two new tanks, the access road, the tanks' perimeter fence, and elements of the utilities will be incorporated into the existing Bulk Fuel Farm (BFF) facility at JFK.

Figure 1-1 shows the project location and Figures 1-2 through 1-4 provide information about the proposed project plan. Photographs 1-6 illustrate the existing conditions at the proposed new tank area. The fenced tank area is southeast and outside of the existing BFF area, which is being remediated. Ongoing remediation activities at the BFF will not impact the proposed project area.

Enclosed, in addition to the figures and photographs noted above, are a completed Federal Consistency Assessment Form (FCAF) and consistency evaluation, and a completed New York City Waterfront Revitalization Program Consistency Assessment Form (NYCWRPCAF) and consistency evaluation.

The proposed work will change the Airport Layout Plan, which must be approved by the Federal Aviation Administration (FAA). The FAA action triggers the need for a consistency certification concurrence from your office (New York State Department of State [NYS DOS]) pursuant to the state's Coastal Zone Management Program (CZMP) policies.

*Engineering Department  
4 World Trade Center, 150 Greenwich Street  
New York, NY 10006*

**THE PORT AUTHORITY OF NY & NJ**

In addition, a consistency concurrence from the New York City Department of City Planning (NYCDCP) pursuant to the New York City Waterfront Revitalization Program (NYCWRP) policies is also being requested.

The Port Authority has reviewed the subject project in light of the NYSDOS CZMP and the NYCWRP coastal zone policies. The Port Authority has determined that there would be no foreseeable adverse effects on coastal resources from this project.

The project site is located in an area of the airport that is inland of the shoreline and is separated from the shoreline by roads and other facilities. Therefore, the work will not require a permit from the U.S. Army Corps of Engineers.

A Stormwater Pollution Prevention Plan (SWPPP) will be prepared for the project and a Notice of Intent (NOI) submitted to the New York State Department of Environmental Conservation (NYSDEC) in accordance with the requirements of JFK's State Pollution Discharge Elimination System Permit NY 000 8109.

Thank you for your assistance in this matter. If you have any questions or require additional information, please contact the undersigned by e-mail at [mhelman@panynj.gov](mailto:mhelman@panynj.gov) or by telephone at (212) 435 - 6112.

Very truly yours,

Marc Helman  
Supervisor, Permits and Governmental Approvals  
Environmental Engineering Unit

NEW YORK STATE DEPARTMENT OF STATE  
COASTAL MANAGEMENT PROGRAM

Federal Consistency Assessment Form

An applicant, seeking a permit, license, waiver, certification or similar type of approval from a federal agency which is subject to the New York State Coastal Management Program (CMP), shall complete this assessment form for any proposed activity that will occur within and/or directly affect the State's Coastal Area. This form is intended to assist an applicant in certifying that the proposed activity is consistent with New York State's CMP as required by U.S. Department of Commerce regulations (15 CFR 930.57). It should be completed at the time when the federal application is prepared. The Department of State will use the completed form and accompanying information in its review of the applicant's certification of consistency.

A. **APPLICANT** (please print)

1. Name: The Port Authority of New York & New Jersey ATTN: Marc Helman
2. Address: 4 World Trade Center, 150 Greenwich Street, 20<sup>th</sup> Floor, New York, NY 10007
3. Telephone: Area Code (212) 435-6112

B. **PROPOSED ACTIVITY:**

1. Brief description of activity:

Installation of two 3,412,080 gallon above ground jet fuel storage tanks, with associated fuel lines, utilities, fire protection system, paved access road, and perimeter fencing. The two new tanks, the access road, the tanks' perimeter fence, and elements of the utilities will be incorporated into the existing Bulk Fuel Farm (BFF facility at John F. Kennedy International Airport (JFK, the Airport). Figures 1-1 through 1-4 provide detail on the proposed project plan, and Photographs 1-6 illustrate the existing conditions of the proposed new tank area. The fenced tank area is southeast and outside of the BFF area which is being remediated. Ongoing remediation activities at the BFF will not impact the proposed project area.

2. Purpose of activity:

To provide additional on-site jet fuel storage to achieve adequate storage and reserve capacity to meet current and forecasted demand, particularly during peak usage periods.

3. Location of activity:

<u>Queens</u>	<u>Jamaica</u>	<u>John F. Kennedy International Airport (JFK)</u>
County	City, Town, or Village	Street or Site Description

4. Type of federal permit/license required: FAA Approval to change in Airport Layout Plan

5. Federal application number, if known: not applicable

6. If a state permit/license was issued or is required for the proposed activity, identify the state agency and provide the application or permit number, if known:

\_\_\_\_\_

C. **COASTAL ASSESSMENT** Check either "YES" or "NO" for each of these questions. The numbers following each question refer to the policies described in the CMP document (see footnote on page 2) which may be affected by the proposed activity.

1. Will the proposed activity result in any of the following: YES/NO

- a. Large physical change to a site within the coastal area which will require the preparation of an environmental impact statement? (11, 22, 25, 32, 37, 38, 41, 43) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- b. Physical alteration of more than two acres of land along the shoreline, land under water or coastal waters? (2, 11, 12, 20, 28, 35, 44) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- c. Revitalization/redevelopment of a deteriorated or underutilized waterfront site? (1) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- d. Reduction of existing or potential public access to or along coastal waters? (19, 20) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- e. Adverse effect upon the commercial or recreational use of coastal fish resources? (9,10) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- f. Siting of a facility essential to the exploration, development and production of energy resources in coastal waters or on the Outer Continental Shelf? (29) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- g. Siting of a facility essential to the generation or transmission of energy? (27) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- h. Mining, excavation, or dredging activities, or the placement of dredged or fill material in coastal waters? (15, 35) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- i. Discharge of toxics, hazardous substances or other pollutants into coastal waters? (8, 15, 35) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- j. Draining of stormwater runoff or sewer overflows into coastal waters? (33) 

<input checked="" type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------
- k. Transport, storage, treatment, or disposal of solid wastes or hazardous materials? (36, 39) 

<input checked="" type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------
- l. Adverse effect upon land or water uses within the State's small harbors? (4) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------

2. Will the proposed activity affect or be located in, on, or adjacent to any of the following: YES/NO

- a. State designated freshwater or tidal wetland? (44) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- b. Federally designated flood and/or state designated erosion hazard area? (11, 12, 17) 

<input checked="" type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------
- c. State designated significant fish and/or wildlife habitat? (7) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- d. State designated significant scenic resource or area? (24) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- e. State designated important agricultural lands? (26) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- f. Beach, dune or Barrier Island? (12) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- g. Major ports of Albany, Buffalo, Ogdensburg, Oswego or New York? (3) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- h. State, county, or local park? (19, 20) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- i. Historic resource listed on the National or State Register of Historic Places? (23) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------

3. Will the proposed activity require any of the following: YES/NO

- a. Waterfront site? (2, 21, 22) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- b. Provision of new public services or infrastructure in undeveloped or sparsely populated sections of the coastal area? (5) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- c. Construction or reconstruction of a flood or erosion control structure? (13, 14, 16) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- d. State water quality permit or certification? (30, 38, 40) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------
- e. State air quality permit or certification? (41, 43) 

<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	-------------------------------------

4. Will the proposed activity occur within and/or affect an area covered by a State-approved local waterfront revitalization program, or State-approved regional coastal management program? (see policies in program document\*) 

<input checked="" type="checkbox"/>	<input type="checkbox"/>
-------------------------------------	--------------------------

**D. ADDITIONAL STEPS**

1. If all of the questions in Section C are answered "NO", then the applicant or agency shall complete Section E and submit the documentation required by Section F.
2. If any of the questions in Section C are answered "YES", then the applicant or agent is advised to consult the CMP, or where appropriate, the local waterfront revitalization program document\*. The proposed activity must be analyzed in more detail with respect to the applicable state or local coastal policies. On a separate page(s), the applicant or agent shall: (a) identify, by their policy numbers, which coastal policies are affected by the activity, (b) briefly assess the effects of the activity upon the policy; and, (c) state how the activity is consistent with each policy. Following the completion of this written assessment, the applicant or agency shall complete Section E and submit the documentation required by Section F.

**E. CERTIFICATION**

The applicant or agent must certify that the proposed activity is consistent with the State's CMP or the approved local waterfront revitalization program, as appropriate. If this certification cannot be made, the proposed activity shall not be undertaken. If this certification can be made, complete this Section.

"The proposed activity complies with New York State's approved Coastal Management Program, or with the applicable approved local waterfront revitalization program, and will be conducted in a manner consistent with such program."

Contact's Name: The Port Authority of New York & New Jersey ATTN: Marc Helman

Address: 4 World Trade Center, 150 Greenwich Street, 20<sup>th</sup> Floor, New York, NY 10007

Telephone: Area Code (212) 435-6112

Contact's Signature:  Date: 29 Sept 2016

**F. SUBMISSION REQUIREMENTS**

1. The applicant or agent shall submit the following documents to the **New York State Department of State, Office of Planning and Development, Attn: Consistency Review Unit, One Commerce Plaza-Suite 1010, 99 Washington Avenue, Albany, New York 12231.**

- a. Copy of original signed form.
- b. Copy of the completed federal agency application.
- c. Other available information which would support the certification of consistency.

2. The applicant or agent shall also submit a copy of this completed form along with his/her application to the federal agency.

3. If there are any questions regarding the submission of this form, contact the Department of State at (518) 474-6000.

\*These state and local documents are available for inspection at the offices of many federal agencies, Department of environmental Conservation and Department of State regional offices, and the appropriate regional and county planning agencies. Local program documents are also available for inspection at the offices of the appropriate local government.

## **New York City State Department of State Coastal Management Program – Federal Consistency Assessment Form Attachment**

The proposed project will occur in New York City, which has an approved waterfront revitalization program. A copy of the New York City Waterfront Revitalization Program Consistency Assessment Form and analyses to the applicable policies has been provided with this request for concurrence.

The proposed project is consistent with New York City's program. Therefore, the project is also consistent with New York State's program, as there are no conflicts with any of the state policies.

### **Applicable New York State Coastal Policies**

**Policy 33 – Best management practices will be used to ensure the control of storm water runoff and combined sewer overflows drainage into coastal waters.**

The Port Authority JFK SPDES Permit No. NY00008109 prohibits contravention of water quality standards due to runoff. There are no combined sewer system overflows (CSOs) from JFK into receiving waters and the water from the Bulk Fuel Farm is conveyed to a treatment plant prior to being discharged into Bergen Basin via Outfalls 4 and 5. The stormwater generated by the facility tank roofs, tank containment areas, existing paved areas and new access road would be conveyed to the existing BFF stormwater sewer system, which discharges to the JFK stormwater treatment plant. Any stormwater discharge into pervious surfaces will continue to percolate into the ground consistent with existing conditions. Therefore, the proposed project is consistent with this policy.

**Policy 36 - Activities related to the shipment and storage of petroleum and other hazardous materials will be conducted in a manner that will prevent or at least minimize spills into coastal waters; all practicable efforts will be undertaken to expedite the cleanup of such discharges; and restitution for damages will be required when these spills occur.**

The proposed fuel facility would be constructed adjacent to and within the existing JFK Bulk Fuel Farm (BFF), 500± feet from the coastal waters of Bergen Basin (a portion of the larger Jamaica Bay estuarine complex). The facility would be equipped with a fire protection system and would be constructed and operated according to all applicable Federal Aviation Administration (FAA), Port Authority of New York and New Jersey and local requirements for the storage and handling of hazardous materials. Therefore, the proposed project is consistent with this policy.

**Policy 39 - The transport, storage, treatment and disposal of solid wastes, particularly hazardous wastes, within coastal areas will be conducted in such a manner so as to protect groundwater and surface water supplies, significant fish and wildlife habitats, recreation areas, important agricultural land, and scenic resources.**

The proposed project will generate solid waste (primarily excess soil) that will be managed and disposed of in accordance with local, state and federal regulations and rules. The proposed project will not use hazardous materials and it is not anticipated that hazardous waste will be generated. An Environmental Management Plan (EMP) will be prepared and implemented during the proposed project. The EMP will

include procedures for the proper handling and disposal of waste and a response plan for spills/releases. The proposed project is consistent with this policy.

**Policy 11 - Buildings and other structures will be sited in the coastal area so as to minimize damage to property and the endangering of human lives caused by flooding and erosion.**

Executive Order (EO) 11988, Floodplain Management, issued May 24, 1977, directs federal agencies to reduce the risk of flood loss, minimize the impacts of floods on human safety, health, and welfare and restore and preserve the natural and beneficial values served by floodplains. An assessment is required under Section 9.2f. of FAA Order 1050.1F, in order to determine if the placement of structures in a base (100-year) floodplain would be a “significant floodplain encroachment.” If an action is not located within the limits of a 100-year floodplain, no further analysis is required.

The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps for the project site and surrounding area indicates that the project site is located within the 500-year floodplain. As such, no portions of the project site are located within the 100-year floodplain. Accordingly, no significant adverse impacts to floodplains are anticipated, and a floodplain assessment of the proposed action pursuant to EO 11988 and FAA Order 1050.1F would not be required. Therefore, the proposed project is consistent with this policy.

**Policy 12 - Activities or development in the coastal area will be undertaken so as to minimize damage to natural resources and property from flooding and erosion by protecting natural protective features including beaches, dunes, barrier islands and bluffs.**

The proposed action would occur adjacent to and within the existing BFF. The existing BFF is developed with fuel infrastructure and does not include natural protective features such as those described in the policy. Therefore, the proposed project is consistent with this policy.

**Policy 17 - Non-structural measures to minimize damage to natural resources and property from flooding and erosion shall be used whenever possible.**

Non-structural measures identified in the NYSDOS policy guidance manual<sup>1</sup> include minimum setbacks, and siting of buildings and facilities outside of flood hazard areas. The proposed fuel facility would be located 500± feet from the shoreline of Bergen Basin and outside of the 100-year floodplain. Therefore, the proposed project is consistent with this policy.

<sup>1</sup> New York State Department of State Coastal Management Program. 2010. *State Coastal Policies*.

FOR INTERNAL USE ONLY

Date Received: \_\_\_\_\_

WRP No. \_\_\_\_\_

DOS No. \_\_\_\_\_

## NEW YORK CITY WATERFRONT REVITALIZATION PROGRAM Consistency Assessment Form

Proposed actions that are subject to CEQR, ULURP or other local, state or federal discretionary review procedures, and that are within New York City's Coastal Zone, must be reviewed and assessed for their consistency with the New York City Waterfront Revitalization Program (WRP) which has been approved as part of the State's Coastal Management Program.

This form is intended to assist an applicant in certifying that the proposed activity is consistent with the WRP. It should be completed when the local, state, or federal application is prepared. The completed form and accompanying information will be used by the New York State Department of State, the New York City Department of City Planning, or other city or state agencies in their review of the applicant's certification of consistency.

### A. APPLICANT INFORMATION

Name of Applicant: Port Authority of New York & New Jersey

Name of Applicant Representative: Marc Helman

Address: 4 World Trade Center, 150 Greenwich Street, 20th Floor, New York, New York 10007

Telephone: 212.435.6112 Email: mhelman@panynj.gov

Project site owner (if different than above): \_\_\_\_\_

### B. PROPOSED ACTIVITY

*If more space is needed, include as an attachment.*

#### 1. Brief description of activity

Installation of two 3,412,080 gallon above ground jet fuel storage tanks, with associated fuel lines, utilities, fire protection system, paved access road, and perimeter fencing. The two new tanks, the access road, the tanks' perimeter fence, and elements of the utilities will be incorporated into the existing Bulk Fuel Farm (BFF facility at John F. Kennedy International Airport (JFK, the Airport). Figures 1-1 through 1-4 provide detail on the proposed project plan, and Photographs 1-6 illustrate the existing conditions of the proposed new tank area. The fenced tank area is southeast and outside of the BFF area which is being remediated. Ongoing remediation activities at the BFF will not impact the proposed project area.

#### 2. Purpose of activity

To provide additional on-site fuel storage to achieve adequate storage and reserve capacity to meet current and forecasted demand, particularly during peak usage periods.

**C. PROJECT LOCATION**

Borough: Queens Tax Block/Lot(s): not applicable

Street Address: John F. Kennedy International Airport (JFK)

Name of water body (if located on the waterfront): not applicable

Is this being reviewed in conjunction with a Joint Application for Permits?  Yes  No

**E. LOCATION QUESTIONS**

- 1. Does the project require a waterfront site?  Yes  No
- 2. Would the action result in a physical alteration to a waterfront site, including land along the shoreline, land under water or coastal waters?  Yes  No
- 3. Is the project located on publicly owned land or receiving public assistance?  Yes  No
- 4. Is the project located within a FEMA 1% annual chance floodplain? (6.2)  Yes  No
- 5. Is the project located within a FEMA 0.2% annual chance floodplain? (6.2)  Yes  No
- 6. Is the project located adjacent to or within a special area designation? See *Maps – Part III of the NYC WRP. If so, check appropriate boxes below and evaluate policies noted in parentheses as part of WRP Policy Assessment (Section F).*  Yes  No
  - Significant Maritime and Industrial Area (SMIA) (2.1)
  - Special Natural Waterfront Area (SNWA) (4.1)
  - Priority Martine Activity Zone (PMAZ) (3.5)
  - Recognized Ecological Complex (REC) (4.4)
  - West Shore Ecologically Sensitive Maritime and Industrial Area (ESMIA) (2.2, 4.2)

**F. WRP POLICY ASSESSMENT**

Review the project or action for consistency with the WRP policies. For each policy, check Promote, Hinder or Not Applicable (N/A). For more information about consistency review process and determination, see **Part I** of the *NYC Waterfront Revitalization Program*. When assessing each policy, review the full policy language, including all sub-policies, contained within **Part II** of the WRP. The relevance of each applicable policy may vary depending upon the project type and where it is located (i.e. if it is located within one of the special area designations).

For those policies checked Promote or Hinder, provide a written statement on a separate page that assesses the effects of the proposed activity on the relevant policies or standards. If the project or action promotes a policy, explain how the action would be consistent with the goals of the policy. If it hinders a policy, consideration should be given toward any practical means of altering or modifying the project to eliminate the hindrance. Policies that would be advanced by the project should be balanced against those that would be hindered by the project. If reasonable modifications to eliminate the hindrance are not possible, consideration should be given as to whether the hindrance is of such a degree as to be substantial, and if so, those adverse effects should be mitigated to the extent practicable.

		Promote	Hinder	N/A
<b>I</b>	<b>Support and facilitate commercial and residential redevelopment in areas well-suited to such development.</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.1	Encourage commercial and residential redevelopment in appropriate Coastal Zone areas.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
1.2	Encourage non-industrial development with uses and design features that enliven the waterfront and attract the public.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
1.3	Encourage redevelopment in the Coastal Zone where public facilities and infrastructure are adequate or will be developed.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
1.4	In areas adjacent to SMIA's, ensure new residential development maximizes compatibility with existing adjacent maritime and industrial uses.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
1.5	Integrate consideration of climate change and sea level rise into the planning and design of waterfront residential and commercial development, pursuant to WRP Policy 6.2.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

		Promote	Hinder	N/A
<b>2</b>	<b>Support water-dependent and industrial uses in New York City coastal areas that are well-suited to their continued operation.</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2.1	Promote water-dependent and industrial uses in Significant Maritime and Industrial Areas.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2.2	Encourage a compatible relationship between working waterfront uses, upland development and natural resources within the Ecologically Sensitive Maritime and Industrial Area.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2.3	Encourage working waterfront uses at appropriate sites outside the Significant Maritime and Industrial Areas or Ecologically Sensitive Maritime Industrial Area.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2.4	Provide infrastructure improvements necessary to support working waterfront uses.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2.5	Incorporate consideration of climate change and sea level rise into the planning and design of waterfront industrial development and infrastructure, pursuant to WRP Policy 6.2.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>3</b>	<b>Promote use of New York City's waterways for commercial and recreational boating and water-dependent transportation.</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
3.1.	Support and encourage in-water recreational activities in suitable locations.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.2	Support and encourage recreational, educational and commercial boating in New York City's maritime centers.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.3	Minimize conflicts between recreational boating and commercial ship operations.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.4	Minimize impact of commercial and recreational boating activities on the aquatic environment and surrounding land and water uses.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.5	In Priority Marine Activity Zones, support the ongoing maintenance of maritime infrastructure for water-dependent uses.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>4</b>	<b>Protect and restore the quality and function of ecological systems within the New York City coastal area.</b>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**NEW YORK CITY DEPARTMENT OF CITY PLANNING  
NEW YORK CITY WATERFRONT REVITALIZATION PROGRAM POLICY ANALYSIS**

**LOCATION QUESTIONS**

*5. Is the project located within a FEMA 0.2% annual chance floodplain? (6.2)*

The project is located within the FEMA 0.2% annual chance floodplain.

**POLICY ASSESSMENT**

*1.5 Integrate consideration of climate change and sea level rise into the planning and design of waterfront residential and commercial development, pursuant to WRP Policy 6.2.*

See Response to Policy 6.2

*2.5 Incorporate consideration of climate change and sea level rise into the planning and design of waterfront industrial development and infrastructure, pursuant to WRP Policy 6.2.*

See Response to Policy 6.2

*5.1 Manage direct or indirect discharges to waterbodies.*

During the installation of the tanks, any potential discharges either from stormwater runoff or from dewatering will be treated to remove sediment and pollutants prior to discharge to surface waters. Additionally, the water will be tested prior to discharge to verify that the discharge water meets the requirements of the Port Authority's SPDES Permit No. NY00008109 for JFK.

The waters surrounding JFK Airport are brackish and the volume of fresh (storm) water being put into the brackish water is not sufficient to cause impact to the salinity or the fish habitat.

The proposed project promotes Policy 5.1.

*5.4 Protect the quality and quantity of groundwater, streams, and the sources of water for wetlands.*

Stormwater runoff from the Bulk Fuel Farm is treated prior to discharge into Bergen Basin to meet water quality standards as required by the SPDES Permit. In addition to the treatment of the stormwater runoff, a slurry wall surrounding the Bulk Fuel Farm and oil slick booms at the outfalls prevent the contamination of Bergen Basin from the contaminants present at the Bulk Fuel Farm.

The proposed project promotes Policy 5.4.

*6.2 Integrate consideration of the latest New York City projections of climate change and sea level rise (as published in New York City Panel on Climate Change 2015 Report, Chapter 2: Sea Level Rise and Coastal Storms) into the planning and design of projects in the city's Coastal Zone.*

All Port Authority new construction or rehabilitation projects are required account for anticipated sea level rise by considering an 18-inch sea level rise over the current FEMA 100-year flood plain plus one-foot for a design criteria of the FEMA 100-year flood level plus 2.5 feet. The installation of the tanks complies with this design criterion to the practicable extent possible.

The proposed project promotes Policy 6.2 (as well as Policy 1.5 and Policy 2.5).

**NEW YORK CITY DEPARTMENT OF CITY PLANNING**  
**NEW YORK CITY WATERFRONT REVITALIZATION PROGRAM POLICY ANALYSIS**

*7.1 Manage solid waste material, hazardous wastes, toxic pollutants, substances hazardous to the environment, and the unenclosed storage of industrial materials to protect public health, control pollution and prevent degradation of coastal ecosystems.*

The proposed project will generate solid waste consistent with construction projects. The disposal of this solid waste will be managed in accordance with local, state and federal regulations. An Environmental Management Plan will be prepared for the project will include procedures for the management and disposal of solid waste expected to be generated, including requirements for the transport of the solid waste to facilities authorized to accept such waste.

The proposed project will not utilize hazardous materials or generate hazardous waste.

The proposed project promotes Policy 7.1.

*7.2 Prevent and remediate discharge of petroleum products.*

The Bulk Fuel Farm is known to have jet fuel contamination in the subsurface soil and groundwater. There is currently an ongoing remediation program at the Bulk Fuel Farm that involves recovering the free phase jet fuel and remediating the dissolved contamination in the soil and groundwater. The Port Authority has successfully remediated the area of concern adjacent to the location for the additional tanks. The Environmental Management Plan will include a plan to avoid the contamination at the Bulk Fuel Farm and a contingency plan to be implemented in the event that a spill should occur.

The proposed project promotes Policy 7.2.

*7.3 Transport solid waste and hazardous materials and site solid and hazardous waste facilities in a manner that minimizes potential degradation of coastal resources.*

The proposed project will generate solid waste consistent with construction projects. The disposal of this solid waste will be managed in accordance with local, state and federal regulations. The Environmental Management Plan that will be prepared for the project will include procedures for the management and disposal of waste expected to be generated during the project, including requirements for the transport of the solid waste to avoid coastal areas.

At no time will a waste facility be created as part of this project because the Port Authority will use existing authorized disposal/waste facilities.

The proposed project promotes Policy 7.3.

**Subject:** JFK Jet Fuel Storage Installation

Marc:

We have completed the review of the project as described below for consistency with the policies and intent of the New York City Waterfront Revitalization Program (WRP).

**JFK Jet Fuel Storage Installation:** Installation of two jet fuel storage tanks at JFK Airport

Based on the information submitted, the Waterfront and Open Space Division, on behalf of the New York City Coastal Commission, having reviewed the waterfront aspect of this action, finds that the actions will not substantially hinder the achievement of any Waterfront Revitalization Program (WRP) policy and hereby provides its finding to the New York State Department of State (DOS) that this action is consistent with the WRP policies and the local program. Please note that the proposed action(s) are subject to consistency review and approval by the New York State Department of State (DOS) in accordance with the New York State Coastal Management Program.

This finding is only applicable to the information received and the current proposal. Any additional information or project modifications would require an independent consistency review.

For your records, this project has been assigned **WRP #16-161**. The DOS file reference number is F-16-0905. Please contact me if there are any questions regarding this review.

*FAA approval to change airport layout plan per:  
Jet Fuel Storage Tank Installation*

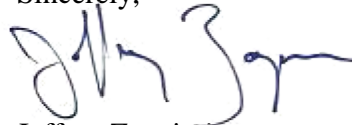

**General Concurrence - No Objection to Funding**

Dear Mr. Helman:

The Department of State received the information submitted regarding the above proposed financial assistance and has completed its review. Based on this review, the Department of State has no objection to Federal Aviation Administration (FAA) approvals in support of the proposed activities/ projects as identified in your letter and federal consistency assessment form, each dated September 29, 2016

***This concurrence pertains to the federal authorization of the above named activity or activities only.*** As certain activities may require a federal permit or other form of federal agency authorization, the Department of State would conduct separate consistency review(s) of permit activities at the time such application(s) may be made to a federal agency.

Sincerely,

Jeffrey Zappieri,  
Manager of Consistency Review

Project JFK Fuel Tank Development				Project No. 170356301			
Location JFK International Airport				Elevation and Datum Approx. 20			
Drilling Company Craig Drilling				Date Started 5/10/16		Date Finished 5/10/16	
Drilling Equipment CME 75 Truck Rig				Completion Depth 102 ft		Rock Depth Not Encountered	
Size and Type of Bit 3 7/8" Roller Bit				Number of Samples 24		Disturbed Undisturbed Core	
Casing Diameter (in) 4" O.D.		Casing Depth (ft) 25		Water Level (ft.) First Completion		24 HR.	
Casing Hammer Automatic		Weight (lbs) 140		Drop (in) 30		Drilling Foreman Keith Parent	
Sampler 2" O.D. Split Spoon				Inspecting Engineer Kenan Sooklall			
Sampler Hammer Automatic		Weight (lbs) 140		Drop (in) 30			

MATERIAL SYMBOL	Elev. (ft) +20.0	Building Code	Sample Description	Depth Scale	Sample Data						Remarks (Drilling Fluid, Depth of Casing, Fluid Loss, Drilling Resistance, etc.)	
					Number	Type	Recov. (in)	Penetr. resist Bl/ft	N-Value (Blows/ft) 10 20 30 40			
			Hand auger to 6' 5' - Brown m-f SAND, trace silt [FILL] (moist)	0								7:00 AM Langan and Craig on site
	+14.0		S-1: Brown m-f SAND, trace silt [FILL] (moist)	6	S-1	SS	8	18				Hand auger to 6' Take S-1
			S-2: Black m-f SAND, some tar, some asphalt [FILL] (wet)	7	S-2	SS	24	6				Install 10' casing (2' stick up) Brown wash Take S-2
			S-3: Black m-f SAND, trace silt [FILL] (wet)	8			20	4				Take S-3
			S-4: Black m-f SAND, trace wood, trace brick, trace silt [FILL] (wet)	9	S-3	SS	1	2				Take S-4
		Class 7	S-5: Black m-f SAND, trace brick, trace concrete [FILL] (wet)	10	S-4	SS	14	3				Install 5' casing (15') Black wash Take S-5
			S-6: Black m-f SAND, trace plastic, trace silt [FILL] (wet)	11	S-5	SS	6	1				Take S-6
			S-7: Black m-f SAND, trace concrete, trace crushed stones [FILL] (wet)	12	S-6	SS	14	2				Install 5' casing (20') Black wash Take S-7
				13	S-7	SS	2	1

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### TARGET PROPERTY INFORMATION

#### ADDRESS

15468 BROOKVILLE BLVD  
JAMAICA, NY 11430

#### COORDINATES

Latitude (North): 40.6573920 - 40° 39' 26.61"  
Longitude (West): 73.8162330 - 73° 48' 58.43"  
Universal Transverse Mercator: Zone 18  
UTM X (Meters): 600074.1  
UTM Y (Meters): 4501188.0  
Elevation: 11 ft. above sea level

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/09/2015 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 4 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### **Federal ERNS list**

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 03/28/2016 has revealed that there are 45 ERNS sites within approximately 0.001 miles of the target property.

### ***State and tribal leaking storage tank lists***

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 02/17/2016 has revealed that there are 24 NY LTANKS sites within approximately 0.5 miles of the target property.

### State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, and dated 03/29/2016 has revealed that there are 29 NY UST sites within approximately 0.25 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 3 NY CBS AST sites within approximately 0.25 miles of the target property.

### **State and tribal institutional control / engineering control registries**

NY RES DECL: A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

A review of the NY RES DECL list, as provided by EDR, and dated 11/18/2010 has revealed that there is 1 NY RES DECL site within approximately 0.125 miles of the target property.

### **Records of Emergency Release Reports**

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/17/2016 has revealed that there are 59 NY Spills sites within approximately 0.125 miles of the target property.

NY SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the NY SPILLS 90 list, as provided by EDR, and dated 12/14/2012 has revealed that there are 10 NY SPILLS 90 sites within approximately 0.125 miles of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2015 has revealed that there are 10 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 10/20/2015 has revealed that there is 1 US AIRS site within approximately 0.001 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 07/20/2015 has revealed that there are 13 FINDS sites within approximately 0.001 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

PA MANIFEST: Hazardous waste manifest information.

A review of the PA MANIFEST list, as provided by EDR, and dated 05/01/2016 has revealed that there is 1 PA MANIFEST site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
NORTH AMERICAN AIRLI Generator EPA Id: NYR000106625	FEDERAL CIRCLE JFK A	0 - 1/8 (0.000 mi.)	D62	78

NY SPDES: New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

A review of the NY SPDES list, as provided by EDR, and dated 05/03/2016 has revealed that there are 2 NY SPDES sites within approximately 0.001 miles of the target property.

## EXECUTIVE SUMMARY

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

eDocs). 02/28/12 - LZ The 2011 Annual Progress Report 9eDocs) shows that absorbent socks were placed in three monitoring wells. The wells were gauged quarterly. 04/25/11 LZ The February 2011 Annual Progress Report prepared by The Port Authority of NY&NJ Engineering Department (eDocs))summarizes the 2010 remedial activities. Wells were gauged monthly and absorbent socks placed in wells that exhibited free product. No Free product was recovered by employing a vacuum truck as only a few wells exhibited residual product (one well - 0.01 in June and one well - 0.28 foot in December). Monthly gauging will be continued in 2011. 05/12/10 - LZ The 2009 annual remedial progress report (eDocs), dated February 2010, shows that 777 gallons of free product were recovered. The highest thickness was noted in MW-22 (0.72 foot); free product was also found in MW-24 (0.49 foot) and MW-16 (0.30 foot). For one month, the facility will continue weekly vacuuming, which was suspended in the second half of 2009 to evaluate the plume stability. After this period, the extraction program will be evaluated. 03/18/09 -LZ The February 2009 Annual Progress Report prepared by The Port Authority of NY&NJ Engineering Department (PA Eng. Dept.)summarizes the 2008 remedial progress data. Four wells exhibiting free product: MW-14, MW-16, MW-22, and MW-24 were extracted weekly. Since thickness of free product decreased in October 2008, in MW-14 and MW-16 vacuuming was stopped and absorbent socks, changed monthly, were used instead. In 2008, 854 gallons of free product were recovered. The report proposes monthly gauging and extraction depending of the quantity of free product. 03/19/08 - LZ Sent a letter to the PA of NY&NJ approving its remediation plan modified as follows: 1. The closure of any recovery wells currently showing the presence of a free phase product should be determined after four months of absence of the free phase product, followed by the confirmation that groundwater contaminant concentrations below the Site Specific Risk-Based Groundwater Levels. 2. An annual project evaluation should be conducted to determine the effectiveness of the remedial activities. The annual report should include tabulated quarterly data, comments, conclusions, and recommendations based on the obtained data. This annual report must be submitted to the Department within 45 days of the final gauging/sampling event of the year. 08/16/07 - LZ A STIP executing requiring subsurface investigation (eDOCs). 10/26/06 - Zielinski Environmental Subsurface Baseline Investigation--a report summarizing investigation at the site conducted in August 2005 by Engineering Department of the Port Authority of NY and NJ--indicates that near mounted tanks fuel odor was noted as well as moderate levels of total petroleum hydrocarbons (TPHC). Free product--#2 oil--was found in two wells near truck loading racks. 4/22/2004 - Spill casr is reassigned to Zhao. Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ZHAO DEC SIGONA INVESTIGATED SITE AND MET WITH JOHN SHERIDAN OF JAMAICA BAY OIL CORP (JBOC) ON JUNE 28, 1995. RECIEVED COPY OF THE REMEDIAL INVESTIGATION PLAN. PRODUCT PLUME DETECTED DURING SITE INVESTIGATION FOR PROPERTY TRANSFER/OR LEASE RENEWAL. ROUX ASSOCIATES NATHAN EPLER IS PROJECT MGR FOR ROUX. PRODUCT RECOVERY TO BEGIN PENDING ACTION BY JAMAICA BAY. CORRECTIVE ACTION PLAN SENT TO DEC ON OCTOBER 23, 1995, DEC SENT LETTER TO JBOC ON NOV 10, 1995 APPROVING CAP, EXCEPT FOR SOME CONDITIONS FOR CLOSURE OF EXISTING MONITORING WELLS AND REPAIRS TO DRAINAGE SYSTEM. DEC SENT OUT STIPS & LETTER FOR COMMITMENT TO JBOC ON NOV. 22, 1995. SPOKE TO BARRY LUCAS AT NYNJ PA SENT FAX COPY OF LETTERS TO BARRY FOR HIS RECORDS. REQUESTED COPY OF LETTERS WHICH PA HAS SENT TO JBOC REGARDING LEASE TERMINATION. "

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

process. Estimated 10 gallon of Ferric Chloride spilled on the side walk during the process of removing the tank from the site. The spill was contained on the side walk and no drain and soil were impacted. DEP pumped the spill into a drum. Mr. Reddngton also confirmed that the site is contamination free and no further investigation is required by the Department. Hence, the spill is closed in the Database. "

Remarks: "clean up pending. contamination contained."

**FINDS:**

Registry ID: 110019834946

**Environmental Interest/Information System**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

**JAMAICA WATER POLLUTION CONTROL PLANT (Continued)**

**1016119344**

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

**AIR SYNTHETIC MINOR**

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

**HAZARDOUS WASTE BIENNIAL REPORTER**

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Environmental Interest/Information System  
 US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.  
 US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

DEC Memo: "DEC Piper- On Tuesday, May 23, 2006, at around 11:30AM, while performing excavation for the Secondary Screening Building, the 2G Contractor uncovered an unidentified concrete slab. While excavating around the perimeter of the slab to determine its size and to see if there are any pipes entering or leaving the slab, the contractor observed a seepage of oil from under the slab. Excavation was stopped immediately. The concrete slab measures 27ft. x 7ft. x 27inches thick. A review of the site records indicates that prior to 1958, a sanitation maintenance garage existed in this location. The site was taken over by DEP and the garage was demolished in 1958 to allow construction of the Git and Storage Building (called Grit Chambers in 1958), with the stipulation that any foundations that extended below the required excavation would be abandoned. The uncovered slab appears to be such a foundation. The slab is in the way of the foundation of the new Secondary Screening Building and needs to be demolished. It is quite possible that additional pockets of oil exist under the slab and will be released during the slab's demolition. At this time, the total amount of oil that has been released is about 1-2 gallons, but the oil has mixed with ground water at the base of the excavation, making exact quantity determination very difficult. The oil/water mix is entirely contained within the excavation. It is recommended that the contractor be allowed to demolish the slab, after which any and all released oil will be captured and removed from the site. Once the dewatering system is placed into operation, the ground water will be drawn down and all contaminated soil within the excavation area will be removed and properly disposed. Consultant= Hazen and Sawyer- (Leo Dudin and/or Gamal Wali) 718.323.8500 9/8/06- DEC Piper spoke w/ Gamal Wali looking for report, analytical. He will send shortly. 5/9/08- I left message for Gamal requesting report."

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

SPDES:

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Tank Info:

Tank Number: 001  
Tank ID: 55531  
Tank Status: Closed - In Place  
Material Name: Closed - In Place  
Capacity Gallons: 25000  
Install Date: 11/01/1955  
Date Tank Closed: 06/20/2013  
Registered: True  
Tank Location: Underground  
Tank Type: Steel/carbon steel  
Material Code: 0003  
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Tightness Test Method: NN  
Date Test: Not reported  
Next Test Date: Not reported

DEC Memo: "03/22/10-Hiralkumar Patel. 1:47 PM:- spoke with Ms. Branch. during repairing water main leak, found limited contamination in shallow soil (less than one foot deep). they excavated to 4 ft depth. no more contamination found in deeper soil. about 5-6 cubic yard soil removed. Ms. Branch mentioned that there is a gasoline dispenser island and this shallow contamination might be result of surface spill in area. cleanup done. case closed."

Remarks: "repairs were performed, during excavation soil contamination found."

DEC Memo: "01/29/09: Sent email to Denise Branch and Bill Glynn of Port Authority requesting additional info regarding spill. Received phone call from Bill Glynn, who said that 8 ft. of fresh product (jet fuel) had been detected in a monitoring well in Area of Concern #3 at BFF (near Tank #85), there is also product in several nearby wells, ranging up to 4 to 6 ft. Port Authority is performing vacuum extraction by truck on wells and investigating to determine source of release. Then received email from Denise Branch: Attached is sketch I received from PA Engineering yesterday [in eDocs image folder] concerning several wells near Outfall #003 now containing some free product. We plan to use vac trucks to remove product. I have contacted Allied Aviation at Bulk Fuel Farm and they suspect that PVC pipe associated with Filter Station 7 & 8 could possibly have a leak. However, Allied's fuel inventory does not indicate any fuel losses. We will meet with Allied tomorrow morning to discuss further investigative and repair plans at site. Please let me know if you have add'l questions. - JK 05/18/09: On 5/14/09, sent email to Denise Branch of PA, cc to Bill Glynn, Bob Pruno & Jim Steven of PA:

**BUILDING #14 AT BULK FUEL FARM (Continued)**

**S109414809**

Does Port Authority have any updated information concerning discovery of fresh jet fuel in wells at Bulk Fuel Farm? Was cause of new release ever determined? Please let me know. On 5/18/09, got reply from Bill Glynn: PA suspected that below-ground PVC closed sumping system in area of filter stations 7 & 8 was broken and therefore contributing to accumulation of fresh jet fuel detected in surrounding monitoring wells. PA performed an investigation by excavating PVC lines around filter station to determine condition. PVC line was determined to be broken in immediate area. PVC lines were repaired. Addtl monitoring wells were installed to monitor effect of repairs. Vac truck program has been initiated for recovery of jet fuel in this area, one vac truck every week day and second vac truck two days per week. To date 7,000 gallons of jet fuel has been recovered from this area. After repair of PVC line, monitoring wells in surrounding area were gauged weekly to determine if sumping system was source. Gauging events indicated increasing product thickness trend in certain wells. PA is unable to determine that PVC system was sole contributor to accumulation of jet fuel observed in monitoring wells. To determine that PVC system is or is not cause, PA as a proactive measure has decided to bring Tracer in to test fuel lines/tanks in this area. By using tracer we can either rule out lines and tanks, indicting PVC line was culprit or determine that lines are an issue. Tracer will be on-site Wednesday 20th. Once we get results we will fill you in on what was found. - J. Kolleeny 03/26/10: Reviewed PA's Feb. 2010 Bulk Fuel Farm Remedial Progress Rpt for 3rd & 4th Quarters 2009 (in eDocs for spill no. 9106609). Rpt Section 4.1 - Tank 84 Release Investigation states that PA hired Praxair Inc. to employ Tracer Tight precision leak detection services. Praxair installed 80 probes to ~3 ft bgs in area of suspected release, along pipelines and around bases of jet fuel ASTs in BFF. Probes collected gas samples which were analyzed for tracer gas; samples indicated a release from bottom of Tank 84. Tank was drained, cleaned & inspected, finding cracked weld on tank sump. Tank will remain out of service until repairs have been made and API inspection performed. Since source of leak has been identified and stopped, PA requested that DEC closed out spill 0811795, as further remediation will be done under BFF spill no. 9106609. This spill case is closed to consolidate with 9106609. - JK "

Remarks: "1945 The caller advised dispatch the spill amount is unknown at this time. No water ways affected. The Jet fuel is in a contained area. Clean up is pending."

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

**SPDES:**

Environmental Interest/Information System  
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was DEMEO Cont. Soil Ltr was NOT sent. Sangesland spoke with GZA Environmental. They knew what needed to be done and didn't need the standard letter. 6/23/2004 Sangesland spoke with Steve Klein of GZA Environmental to ask where the report was. He said he got the soil samples back and there were some hits on the eastern sidewall. He was unsure if they could go back and dig more, or if the stairway & electrical lines were in the way. Mr. Klein will talk to his client and will get back to the DEC on what they will do. 9/17/04 TJD Closure report submitted by GZA Environmental. 2,500 gallon UST removed. Tank reported to be in good condition, however, soil contamination was found in the vicinity of the vent/fill lines at their tank connection. Total of 8 yds of contaminated soil was excavated and properly disposed of. Endpoint samples taken revealing low level TAGM exceedances for SVOC's in the vicinity of sidewall sample SW. Level of contamination does not warrant any remedial action. No further action required. Spill closed."  
Remarks: "Found stained soil around the fill pipe. Removed 3-5 yds. of contaminated soil. Removed the tank from the excavation. Sampled the area and are now going to back fill the area. Caller spoke with Randy Austin (Reg. 2 DEC) who approved backfilling the excavation."

DEC Memo: "This spill report was created for tracking purposes related to the Department's Hurricane Sandy emergency response efforts. pumped out 11/10/2012 by JRG. 1100 gallons removed. 12/4/12-Vought-Vought received inquiry from DEC Rodney Rivera that he received call from homeowner who was requesting on further guidance for oil spill cleanup. Owner noted that DEC Piper was on site twice previously and was very helpful. Vought held teleconference with DEC Piper, DEC Rivera, RSE and DEC John and Piper noted that spill was caused by Hurricane sandy and that basement and first floor were heavily impacted with petroleum and vapors were present as well. Piper noted that 275-gallon #2 fuel oil AST in basement was source of oil and that there was 4-6 of oil and water in basement when he did pumpout and he instructed owner to contact insurance company. Rivera noted

DER Facility ID: 400894  
DEC Memo: "Sangesland spoke to Mr. Khodabash (property owner). He said the original TTF failed because of a problem with the gasket on the top of the UST. After the failure, he had his own people replace the gasket and now he says the tank is fine. Sangesland said that since there was a failure listed in our system, the only way he can close this out is by redoing a Tank Test and getting a passing report. 1/31/2012 Since the gasket was replaced and the owner says the problem is fixed, the DEC is closing this spill case out - BUT CLOSING THIS CASE WITHOUT PROOF OF REPAIRS. \*\*\*IF THE BUILDING IS EVER SOLD OR REFINANCED, LENDER SHOULD ASK FOR PROOF OF TANK TEST PASSING\*\*\*\*\*"

now working for Fleet Recovery. Fleet Recovery is a tenant of City DOT owned property. DOT is not doing any work on the site. Problem predates Fleet Recovery moving onto the property. Tank was in a self contained area, aboveground and dispensed either #2 or Diesel fuel. Problem was from drips from fill nozzle onto the gravel ground during truck fill ups. Fleet Recovery had ABC remove the tanks and is planning on having the surface contaminated soil removed. 10/04/05. J.Krimgold spoke to Ted Yen (718-961-8530) from Independent Testing Laboratories, Inc. They were 10/26/05 - Austin - Project reassigned from Krimgold to Rahman - end 12/02/05-Sharif/Rec'd investigation report prepared by Miller Env. Group.The purpose of the subsurface investigation was to determine if soil and/or ground water contamination had resulted from the weak 275 gal. AST and piping system. Following the reported oil spill, the tanks were closed and removed from the site.All stained soils were excavated and drummed for disposal.MEG installed 3 temporary monitoring wells in close proximity to the former tanks and storm drain. Lab data indicated non-detectable concentrations of VOCs in all the soil samples. MtBE was found in the water samples B1(12.00 ppb)& B2(3.70 ppb) respectively which are acceptable limit. No other VOCs were detected in any of the other samples. SVOCs were also non-detectable.NFA required."

DEC Memo:

"no PBS found for this site. 12/14/04-Vought-Spill transferred from Rommel to Vought. Office visit by Thomas Piazza (construction manager for owner 718-767-0807 fax 718-767-1573). Owner is: H. Dieter Holterbosch 375 Park Avenue New York, NY 10152 212-421-3800 Attn:Hellmut Laufer PBS application for registration and decommissioning filed on 12/14/04. Two pump islands and registration submitted for ten (550-gallon) gasoline USTs and one (2000-gallon) gasoline UST. Tanks will be located and removed and endpoint samples from sidewalls and bottom will be collected and analyzed for EPA Method 8260/8270. Vought explained that groundwater sample must be collected from each pump island and one from each tankfield. Possibility of remote fill locations will be investigated and removed (if applicable). Closure Report will be submitted to DEC including endpoint sample analyticals, site plan, disposal manifests, PID readings and sample collection methods. Sites current and future use is parking lot. DEC will receive closure report 3/1/05. DEC will be contacted once tanks are removed and prior to collection of endpoints so a site visit can be scheduled. 12/16/04-Vought-Received call from ECO Lum that odor complaints were received from adjacent neighbors. Vought performed site visit and required that soil be stockpiled and covered and Community Air Monitoring Program as per DER10 be implemented. 12/28/04-Vought-Called Piazza for site update. No further activity until disposal sample is received. Five USTs removed from site. Piazza is expecting Phase II report to be completed by prospective tenants environmental consultant. No further complaints received since original complaint. Vought sent letter with above requirements. 1/10/05-Vought-Received message from Ecosystems Strategies (Paul Ciminello 845-452-1658). Vought returned call and spoke to Stephanie Conklin who requested copy of file. Vought faxed her spill report and letter dated 12/28/04. 2/24/05-Vought-Received call from Piazza (718-767-0807). Vought returned call and spoke to Piazza and 1100 tons of impacted soil. Groundwater in bottom of excavation. One groundwater samples was collected and preliminary endpoint samples were collected. Groundwater samples collected for 1,3,5 trimethylbenzene showed approx 7ppb. Vought instructed Piazza to send in Tank Closure Report and groundwater sample analyticals. One endpoint samples also collected at fillport. DEC will receive Closure Report by 4/15/05. 3/14/05-Vought-Spoke to Piazza and 20 endpoint samples were collected sample from underneath fill port showed minor SVOCs due to backfill. Vought told him to put in soil description and send in results by 4/15/05. 3/30/05-Vought-Spoke to Piazza and disposal manifests will be included in report. 4/8/05-Vought-Reviewed Closure Report for Port Distributing Corporation. Removal of five (2000-gallon) gasoline USTs and 1029.11 tons of soil. Twenty endpoint samples taken and no TAGM 4046 Soil Cleanup Objective exceedence. Groundwater sample shows minor exceedence of 7ppb 1,3,5-trimethylbenzene and 1.4ppb benzene. PID monitoring reports also included. Spill closed by Vought."

Remarks:

"contamination is from 6 to 10 feet below grade, some evidence of free product."

**NEWTOWN CREEK (Continued)**

**S117974848**

DEC Memo: "6/25/2015 - Feng - Duty Desk. Talked to Willis Elkins of Newtown Creek Alliance (713-501-6400). It is a large area of material looks like white small particles and synthetic composition. He suspected that the material is from a nearby company. S. Mahat responded to the spill. Spill is assigned to S. Mahat. 6/25/15: Mahat Response: DEC Mahat perform several interview with nearby business owner/tenant during investigation. Source of the white material was not detected. It is highly possible being pollen from the surrounding plants. Further investigation is not warranted by the Department since it is not regulated. Spill case is closed in DEC Spill Database. "

Remarks: "Caller advising a factory is pouring out a mixture of installation into the creek. Ongoing problem."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Region: 02

Classification: Conditionally Exempt Small Quantity Generator

Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
Used oil refiner: No  
Used oil fuel marketer to burner: No

DEC Memo: "Spill was closed on 3/4/2003 by unknown person(s). Re-opened on 10/13/2004 by J. Kolleeny. PMS Construction Mgt. Corp. and Shaw Group are installing a soil vapor extraction & bioventing system to address soil contamination at Queens E. 10 Garage site, monitoring groundwater on quarterly basis. Spill transferred from Kolleeny to A. Zhitomirsky on 4/6/05. - JK 10/06/05 Remediation system construction began in April 2005 and finished in August 2005. AZ 9/12/2006 The site was transferred to Greyhawk. Greyhawk requested on 9/12/2006 that Franklin operations and maintenance subcontractor) shut down Queens 8 & 10 because of breakthrough of the air phase carbon on both systems. E-mail which was received from Andy Leddins stated that based on previous analytical data and system operational history, Queens 8 & 10 are being considered for shutdown, and have been presented as such, in the last quarterly report(s) submitted to your

offices. Greyhawk/Roux and their subcontractor find the recent PID hits in the air stream curious, and therefore they will be performing a site investigation later this week to evaluate potential causes. AZ 12/6/2006 Reviewed quarterly report submitted on Aug. 32, 2006. The report proposed a permanent shut down the SVE/BV system but in September 2006 a breakthrough of the air phase of the system was recorded. A soil sampling plan will be submitted to DEC. Proposed replacing caged sock in MW-09 with petroleum absorbent sock if sheen is still present. AZ 12/22/2006 At the meeting with DDC/Greyhawk on 12/12/2006 the remedial progress was discussed. Greyhawk will run the system twice and sample inflow air. Soil sampling plan will be submitted. AZ 2/14/2007 Reviewed Quarterly monitoring report dated December 11, 2006. Roux recommended reduction of groundwater sampling to semiannual. DEC approved this recommendation. Also, DEC agreed that sampling of wells MW-11, MW-12, MW-14 and MW-16 could be discontinued. However, prior to the spill closure all wells should be sampled. An e-mail was sent to DDC/Roux. Roux recommended that SVE/BV system should be briefly operated and influent vapor samples collected. After four weeks, the system should be re-started for 12 hours and re-sampled. Confirmatory soil samples should be collected in the North Tank Area and the South Tank Area. A work Plan will be submitted under separate cover for DEC approval. AZ 7-18-2007 Reviewed Quarterly monitoring report dated April 11, 2007, for October-December 2006. SVE/BV system was offline since September 2006. The system was shut down after subcontractor reported unusual odors and high PID readings in influent and effluent. A rebound test for the system was conducted in March 2007 but the results have not been submitted yet. Monitoring wells MW-9, MW-13 and MW-14 could be accessed and, therefore, were not sampled. The only VOC detected was MTBE in eight of the ten wells that were sampled but none of these detections was above NYSDEC AWQSGV. Greyhawk will perform confirmatory soil sampling based on the rebound test results. A work plan will be submitted with the next semi-annual report for DEC approval. Roux proposed to collect confirmatory soil samples and remove SVOCs from the laboratory analytical program since these compounds have not been detected for the three previous consecutive sampling rounds. DEC concurred. E-mail was sent to Roux: Roux recommended collecting confirmatory soil samples and removing SVOCs from the laboratory analytical program since these compounds have not been detected for the three previous consecutive sampling rounds. DEC concurs with these proposals. Confirmatory soil sampling plan should be submitted to DEC for approval. AZ 12-20-2007 An e-mail was sent to DDC/Roux: I have reviewed January - June 2007 Report for this site dated September 18, 2007, and submitted on October 17, 2007. Roux proposed additional soil investigation. This plan is approved. Also, Roux proposed removing the remaining groundwater monitoring wells from the monitoring program except wells MW-01 and MW-04. However, downgradient monitoring wells should be also monitored. Therefore, wells MW-06 and MW-03 should remain in groundwater monitoring and sampling program. AZ 7-22-2008 Reviewed semi-annual report for the period of July through December 2007 and dated April 30, 2008. The SVE/BV system remains currently inactive. Its records reviewed by Roux did not include any specific information on when the construction took place or when the system commenced operations. Early system performance data was also not available for review. On November 7, 2007, gw sampling was performed. MW-15 is destroyed and MW-01 was not accessible. VOCs were detected in two monitoring wells

**QUEENS EAST 10 DOS -DDC (Continued)**

**S105054679**

at 12-23 ppb. Marginal residual VOC are present in soil as evidenced by an initial spike detected in the SVE influent. Confirmatory soil sampling was performed in February 2007. They will be evaluated to determine the need for SVE/BV system. AZ 10-30-2009 The following e-mail was sent to DDC/V.B., Brian Morrissey (Roux): I have reviewed semi-annual report for the period of January 2008 through January 2009 and dated April 23, 2009. The SVE/BV system remains currently inactive. Its records reviewed by Roux did not include any specific information on when the construction took place or when the system commenced operations. Early system performance data was also not available for review. In February 2008 and April 2008 Roux performed additional site investigation approved by DEC in December 2007. Six soil borings were advanced. VOCs were detected in five soil samples. The concentrations ranged from 198 ppb to 204,300 ppb (RXSB-06 @ 15'-17' depth). VOCs dissolved in groundwater were detected and ranged from 93 ppb to 17 ppb. Roux will perform evaluation of the floor drain system (including the associated oil/water separator) as a potential source for petroleum contamination. Roux will install ORC socks in MW-01 and MW-06. The results of soil investigation completed in April 2008 show that there is residual soil contamination present at the site. The SVE/BV system should be modified to address soil contamination at the site. AZ 2-4-2011 Reviewed Work Plan proposals dated Sept. 16, 2010 and received from J. Kolleeny in December 2010. The Work Plan proposed using ORC to remediate soil contamination. There is minimal groundwater contamination at the site. I contacted S. Frank and discussed the site. The proposed remedial method (ORC) injection would not be the most effective in remediation of the soil smear zone where the bulk of contamination is found. LiRo will submit alternative remedial proposals. Also, floor drain system and oil/water separator should be investigated as a source for potential contamination. AZ 9-23-2011 An e-mail was sent to S. Frank/V. brevdo/F. Ashkan: Dear Steve, I have reviewed a semi-annual monitoring report for this site dated June 28, 2011. The report stated that there are two zones of soil contamination: 1. the area adjacent to the drain and 2. the area in the southern part of the site. LiRo proposed evaluation of the SVE system and natural attenuation of the soil contamination. Evaluation and modification of the SVE system is approved. Semi-annual monitoring should be performed at the site. However, soil contaminant concentrations are too high for natural attenuation. More aggressive remedial strategy should be considered. AZ 3-1-2012 Reviewed a semi-annual monitoring report dated December 14, 2011. LiRo will complete an investigation into the trench drain and oil/water separator to determine if either of these are contributing to contamination observed. They will continue evaluation of the SVE system. The following email was sent to S. Frank/F. Ashkan/V. Brevdo: Dear Steve, I have reviewed a semi-annual monitoring report dated December 14, 2011. LiRo will complete an investigation into the trench drain and oil/water separator to determine if either of these are contributing to contamination observed. Also, LiRo will continue evaluation of the SVE system. Semi-annual monitoring should be performed at the site. Soil contaminant concentrations are too high for natural attenuation. More aggressive remedial strategy should be considered. Sincerely, AZ 2-4-2013 Contacted S. Frank. According to the report dated July 5, 2012, during the site visit conducted on January 3, 2012, visual inspection was performed. LiRo made a conclusion that oil/water separator and associated catch basins are not leaking. In a

**S105054679**

conversation with S. Frank I stated that visual observation is not sufficient for such conclusion. The following e-mail was sent to S. Frank/F.Ashkan/V. Brevdo: Dear Steve, I have reviewed a Monitoring Report for the above site for the period of September 2011 to February 2012. The report states that during the site visit conducted on January 3, 2012, visual inspection of oil water separator was performed. LiRo made a conclusion that oil/water separator and associated catch basins are not leaking. In a telephone conversation with S. Frank, I stated that visual observation is not sufficient for such conclusion. According to the report, the site has two distinctive areas of soil contamination. Area 1 is located in the southern portion of the site near wells RXSB--02, RXSB--03 and RXSB--04. Total VOC concentrations ranged from 30,900 ppb to 204,300 ppb. The second area of contamination is located near RXSB-05, adjacent to an existing floor drain. Total VOC concentration at this location was reported at 40,790 ppb. LiRo suggested additional soil investigation. However, this site is fairly well investigated. A remediation strategy is needed to address existing contamination at the site. LiRo should submit a remediation program for this site. A hot spot excavation should be considered, as well as other remedial options. Sincerely, Alexander Zhitomirsky 7-9-2013 Reviewed a monitoring report dated 1-15-2013. Soil contamination is present at the smear zone (12'-20'). Residual soil contamination is present in the area adjacent to the floor drain and the southern portion of the site in the vicinity of the borings RXSB-02 and RXSB-04. AZ 3-26-2014 The following e-mail was sent to S. Frank: Dear Steve, I am reviewing a Semi-Annual Report and Remedial Alternative Evaluation for this site. The report quotes Attachment E which contains Remedial Alternative Evaluation. However, this report does not contain Attachment E. Please forward to me a hard copy of this attachment so I can complete review of this report. Thank you, Alexander Zhitomirsky 3-31-2014 Received and reviewed missing Evaluation of Remedial Alternatives. LiRo recommends In-Situ Chemical Oxidation (ISCO) for Area 2 of the site. The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a Semi-Annual Monitoring Report for this site dated September 6, 2013, and Remedial Alternative Evaluation received on March 28, 2014. In this report LiRo recommends In-Situ Chemical Oxidation (ISCO) for Area 2 of the site. This proposal is approved. Also, LiRo proposed Natural Attenuation for Area 1. However, a decision regarding this area will be made when catch basin investigation to study damage to a basin or piping is completed. Sincerely, Alexander Zhitomirsky 9-10-2014 Reviewed semi-annual monitoring report dated January 24, 2014. The report stated that based upon current and past results of the groundwater data, the site has been broken into two contamination areas, Area1 located north of the catch basin and Area 2 located south of the 2,500-gallon UST. ISCO was recommended for Area 2. AZ 2-26-2015 The following e-mail was sent to S. Frank and V. Brevdo: Dear Steve, I have reviewed a semi-annual monitoring report for this site. The report recommended a hotspot excavation in the vicinity of boring RXSB-05 in Area 1. Five end-point soil samples will be taken. This work plan is approved. As per LiRo s recommendations, drain lines should be cleaned. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. Sincerely, Alex Zhitomirsky 9-15-2015 Reviewed a semi-annual monitoring report dated March 9, 2015. The report stated that due to the failure to access and inspect site drain lines/catch basins/oil water separator areas

KOLLEENY TANK PULL ENDPOINT SAMPLES SHOWED CONTAMINATION. SITE WILL BE INVESTIGATED BY IT CORP. OR WARREN & PANZER, UNDER MANAGEMENT OF PMS CONSTRUCTION CORP. IT Corp./Shaw Group (consultant to PMS) investigated site in 2003 and recommended installation of an air sparging / soil vapor extraction system to address soil and groundwater contamination. This was approved by DEC in March 2004 and a letter of agreement authorizing system operation and discharges was issued by DEC in January 2005. However, the remedial plan was ever implemented; meanwhile, PMS's contract expired. Management of site was transferred to Greyhawk/Roux in late 2005. 11/15/06: Reviewed Quarterly Report for April-June 2006 submitted by Roux and dated 9/22/06. Report notes that May '06 groundwater sampling showed substantial decreases in contaminant levels in most wells sampled, compared to previous round in October '03; nevertheless, significant levels of contamination remain in several wells. Roux recommends (1) continuing quarterly groundwater monitoring for another round and evaluating wells for removal from monitoring program or change of sampling frequency, (2) attempting to locate several wells which could not be found and considering replacing well VP-2, and (3) evaluating cost-effectiveness and feasibility of alternative remedial technologies to address groundwater contamination and comparing these to installation of the DEC-approved AS/SVE system. I sent email on 11/15/06 with following responses: 1. Based on groundwater flow direction, a new well should be installed to southeast of well MW-5 (the most contaminated well), across 150th Avenue from site, to determine if groundwater contamination has migrated off-site. Replacement of well VP-2 is a lower priority than installation of this down-gradient well. 2. As suggested in report, if next sampling round shows significant contamination, various active remedial approaches should be evaluated and a remedial plan selected to address site conditions. - J. Kolleeny 03/01/2007: This spill case was transferred to A. Doronova. - AD 03/14/2007: Reviewed Quarterly Monitoring Report for July-December 2006 submitted by Roux dated January 31, 2007. It states that compared to May 2006 sampling round, total concentrations of VOCs have increased in 5 out of 7 monitoring wells (November 2006). The significant increases were detected in MW-02 and MW-05 where the total concentration of VOCs increased from 17ug/L in May 2006 to 2,850ug/L in November 2006 and from 1,510ug/L in May 2006 to 10,277ug/L in November 2006, respectively. Roux recommends to remove SVOCs sampling from monitoring round since Naphthalene was the only compound detected. Suggested well was not installed. This sampling round showed significant increase of VOCs concentrations in GW monitoring wells and as J. Kolleeny mentioned above ROUX should select a RAP. AD 03/15/07: Spoke with B. Morrissey of ROUX about submittal of the latest GW lab results to see if they will show another increase of VOCs concentrations in GW. Reviewed submitted labdata. Concentration of total VOC increased in 4 of 7 sampled monitoring wells: MW-1: from 470ug/L to 517mg/L; MW-2: from 2850ug/L to 3737ug/L; MW-6: from 851ug/L to 1633ug/L; MW-7: from ND to 299ug/L. MW-5 showed decrease in total VOC concentration from 10277ug/L to 9910ug/L. The only semi-volatile compound detected was Naphthalene: 28ug/L in MW-1, 150ug/L in MW-2, 550-ug/L in MW-5 and 55ug/L in MW-6. AD Spoke to B. Morrissey about submission of remedial proposal together with next monitoring report. AD 07/02/2007: Reviewed Additional Site Investigation Work Plan submitted by Roux together with Quarterly Monitoring Report for period January - March 2007 dated June 15, 2007. The work plan proposes installation of one

**S105054679**

groundwater monitoring well to southeast of MW-05, across 150th Avenue from the site, to determine if groundwater contamination has migrated off-site. Soil and groundwater analytical results will be presented in the next QMR. Recent QMR summarizes lab results submitted to DEC on 03/15/07. Because the only SVOC detected in all groundwater samples was Naphthalene, Roux recommends to remove SVOCs from the groundwater sampling program, but continue to sample for VOCs, including Naphthalene as a target compound. Roux postponed submission of a remedial proposal till obtaining data from the additional monitoring well. Proposal will be submitted in the next QMR. AD 07/05/2007: Sent an approval letter for ASIWP with the comment regarding soil sampling interval. AD 02/19/2008: Received QMR for April - December 2007. Downloaded to Edocs. Will review. AD 04/07/2008: Reviewed the report. During the reporting period, Roux conducted the GW monitoring round and installed a new monitoring well followed by collection of soil samples. GW was sampled in April, July and October 2007. During the October round, VOCs were detected in five out of the ten wells sampled (MW-01, MW-02, MW-04, MW-05 and MW-06). Total VOCs ranged from 330 ppb in MW-04 to 11321 ppb in MW-05. Based on the historical GW data, the two most contaminated wells have had fluctuating concentration trend. On August 29, 2007, monitoring well RXMW-01 was installed and three soil samples were collected for lab analysis. Neither VOCs or SVOCs were detected in any of these samples. Roux plans to continue quarterly GW sampling at the site and also will analyze GW for bio-remediation parameters to determine if in situ enhanced bio-remediation is feasible at the site. If it will be feasible and cost effective, a work plan will be submitted to DEC with the next monitoring report. No response is needed. AD 12/01/2008: Received a monitoring report for the period January - October 2008. DL to eDocs. Will review. AD 12/19/2008: Reviewed the Quarterly Monitoring Report for January - October 2008 period submitted by Roux and dated November 24, 2008. During the reporting period, Roux conducted four GW monitoring rounds: in January, March, July and October. During the latest October 2008 round, different levels of VOCs were detected in seven out of the ten site's wells sampled: (MW-03 (25ppb), MW-06 (128ppb), VP-02 (12ppb), MW-01 (783ppb), MW-02 (1,610ppb), MW-04(1,135ppb)and MW-05 (9,209ppb). At MW-04, total VOCs have increased from ND (July'07) to 1,135ppb (Oct'08). On June 30, 2008, free-phase product was detected in monitoring well MW-05 (0.01'). No measurable free-phase product was encountered during the subsequent gauging round (October 7, 2008). The free product sample collected from MW-05 was identified as gasoline. Based on the data, Roux concludes that residual high and moderate level VOC groundwater contamination remains onsite. Roux proposes to implement Enhanced Bioremediation via injections of oxygen-generating compound (PermeOx Plus), microbes and a nutrient complex to remediate contaminated soil and GW beneath the site. AD 12/23/2008: Discussed the work plan with J. Kolley of DEC. Sent an approval letter to A. Samani of DDC. DL to eDocs. 09/30/2010: Received a monitoring report for a period of April-September 2010. DL to eDocs. Will review. AD 11/12/2010 Reviewed the Site Turn-Over Status Report & Semi-Annual Monitoring Report for the period April September 2010. The report also includes a Bioremediation Injection Work Plan. The report presents a summary of groundwater sampling results and states that significant groundwater contamination remains localized in the southwestern area of the site. Based on the data, LiRo proposes to continue implementation of enhanced bioremediation

at the site. PetroBac Stimulant Bundle and a nutrient complex will be introduced into the contaminated area via twelve injection points, in two injection field events, over period of six months. Performance field parameters will be monitored after each injection event, and quarterly groundwater sampling will continue at the site. A summary report with conclusions and recommendations will be submitted to DEC. AD 11/23/2010: Issued and sent an approval letter for the proposed Bioremediation Injection Work Plan. AD 08/03/2011: Received a monitoring report for a period of January-May 2011. DL to eDocs. Will review. AD 09/29/2011: Reviewed the QMR. It states that from January 13 to January 19, 2011, injection wells IP-08 through IP-19 were installed at the site as per the approved BIWP. Soil samples were collected from the borings. The injection wells were surveyed by CME Associates on February 4, 2011. On January 25, 2011, pre-injection groundwater samples were collected from injection wells IP-08 through IP-19. Free-phase product was detected in IP-17 at 0.25 feet thick during the pre-injection gauging. On January 25 and 26, 2011, per the BIWP, injections of bacteria and nutrients were completed in Site wells IP-08 through IP-19. Groundwater samples were collected on January 25, 2011, and April 19, 2011, from the injection wells and monitoring wells (April 2011 event only). The samples were analyzed for STARS list VOCs including MTBE and Naphthalene. The groundwater analytical results for the monitoring wells indicate that VOC concentrations were lower in the April 2011 sampling compared to the October 2010 sampling. Post-second injection groundwater sampling was completed between July 25 and 27, 2011 and the analytical results will be presented in the next quarterly monitoring report. Free-phase product was detected in wells IP-17, MW-07 and intermittently in IP-16. Petroleum fingerprint samples were collected from well IP-17 and MW-07. The analytical results indicated the presence of kerosene in well IP-17 and gasoline in MW-07. Petroleum absorbent socks were installed in wells IP-17 and MW-08 during the April 2011 sampling. Field monitoring data and laboratory sampling data indicate that microorganism activity is present and dissolved phase concentration in some of the historically contaminated wells such as MW-01, MW-02, MW-03 and MW-05 are decreasing. However, additional sampling data is required to further evaluate the effectiveness of the bio-injections and determine whether additional injections are warranted. Base on the data, LiRo proposes to: " Continue monthly monitoring of field parameters in conjunction with the bio-injection program; Groundwater sampling of wells IP-08 through IP-19, MW-01 through MW-03, MW-05, MW-06, MW-08, RXMW-01, VP-01 and VP-02 as part of the monitoring program relating to the bio-injections. The groundwater samples will be analyzed for STARS list VOCs + MTBE + Naphthalene and various bio-parameters; " Continue routine quarterly groundwater sampling of monitoring wells in the current Site monitoring program; " Conduct an evaluation to determine if further injections will be necessary/warranted following the second groundwater sampling event (July 2011); " Maintain use of petroleum absorbent socks in wells IP-17 and MW-07 to remove free-phase product. The socks will be changed on an as-needed basis. There are currently no proposals requiring NYSDEC approval. AD 02/17/2012: Received a monitoring report for a period of June - November 2011. DL to eDocs. Will review. AD 02/23/2012: Reviewed the QMR. It states that post-injection field parameter monitoring was completed on June 17, August 29, September 30 and October 25, 2011, in conjunction with post-injection groundwater sampling completed on July 26, 27 and 28,

MAP FINDINGS

**S105054679**

2011 and November 28 and 29, 2011. Field parameter monitoring was completed at monitoring wells MW-01 through MW-08, RXMW-01 and injection wells IP-08 through IP-19. For purposes of evaluating field monitoring data, only data from the monitoring wells was utilized. Data from the injection wells is not considered representative of groundwater conditions. Field data indicates that pH and temperature ranges were within recommended values. Field measurements indicate that levels of dissolved oxygen and Eh are continuing to fluctuate. The latest groundwater sampling results show that bacteria are present at the Site at levels favorable for bioremediation. Based on these observations, it is assumed that bioremediation is still active at the Site. On July 26, 27 and 28, 2011, groundwater samples were collected from wells IP-08 through IP-19, MW-01 through MW-08, RXMW-01, VP-01 and VP-02. The results of the July 2011 sampling showed VOCs were detected above AWQSGVs in 6 of the 12 groundwater samples collected from injection wells IP-08 through IP-19. Total VOC concentrations in the 6 samples from the injection wells ranged from 29 ug/L in well IP-09 to 21,462 ug/L in well IP-17. The results of the July 2011 sampling also showed VOCs were detected above AWQSGVs in 6 of the 11 groundwater samples collected from wells MW-01 through MW-08, RXMW-01, VP-01 and VP-02. Total VOC concentrations in the 6 samples from these wells ranged from 65 ug/L in well VP-02 to 6,438 ug/L in well MW-05. July Groundwater data - TVOCs (ppb): 1. IP-8 - ND; 2. IP-9 - 29; 3. IP-10 - 1; 4. IP-11 - ND; 5. IP-12 - 4; 6. IP-13 - 16,709; 7. IP-14 - 1; 8. IP-15 - 8; 9. IP-16 - 15,192; 10. IP-17 - 21,462; 11. IP-18 - 10,012; 12. IP-19 - 71; 13. MW-1 - 1,772; 14. MW-2 - 1,052; 15. MW-3 - 1; 16. MW-4 - 325; 17. MW-5 - 6,438; 18. MW-6 - 48; 19. MW-7 - 15; 20. MW-8 - ND; 21. RXMW-1 - ND; 22. VP-1 - 12; 23. VP-2 - 62. The latest round of groundwater samples collected on November 28 and 29, 2011, monitoring wells MW-01, MW-02, MW-04, MW-05 and MW-06 have VOCs above AWQSGVs. The results of the November 2011 sampling showed VOCs were detected above AWQSGVs in 4 of the 12 groundwater samples collected from injection wells IP-08 through IP-19. Total VOC concentrations in the 4 samples from the injection wells ranged from 425 ug/L in well IP-18 to 11,046 ug/L in well IP-13. The results of the November 2011 sampling also showed VOCs were detected above AWQSGVs in 6 of the 11 groundwater samples collected from wells MW-01 through MW-08, RXMW-01, VP-01 and VP-02. Total VOC concentrations in the 6 samples from these wells ranged from 24 ug/L in well MW-01 to 4,260 ug/L in well MW-05. All five of these wells: MW-01, MW-02, MW-04, MW-05 and MW-06 have exhibited decreases in total VOCs as a possible result of the bio-injections. The depth to groundwater at this Site ranges from approximately 15 to 16 ft bgs with a seasonal fluctuation of up to approximately 4 feet. The interpreted groundwater flow for all three monitoring events is similar to previous gaugings with an overall flow toward the south/southeast. No free-phase product was detected in any well during the monitoring period. The petroleum absorbent sock installed in well IP-17 in April 2011 was removed on November 28, 2011. The petroleum absorbent sock installed in well MW-07 in April 2011 was reported as 25% spent as of October 25, 2011. LiRo will continue routine quarterly groundwater sampling of monitoring wells and will maintain use of petroleum absorbent sock in well MW-07 to remove free-phase product. The sock will be changed on an as-needed basis. There are currently no proposals requiring NYSDEC approval. AD 09/04/2012: Received a monitoring report for a period of December 2011 - March 2012. DL to eDocs. Will review. AD 11/06/2012: Reviewed

**S105054679**

the report. It states that for the period between December 1, 2011 and March 31, 2012 GW samples were collected on March 27, 2012. Groundwater samples were collected from 14 out of 23 total site wells: IP-13, IP-14, IP-16 through IP-19, MW-01 through MW-05, MW-07, MW-08 and RXMW-01. March 2012 groundwater data - TVOCs (ppb): 1. IP-8 - NS from ND; 2. IP-9 - NS from 29; 3. IP-10 - NS from 1; 4. IP-11 - NS from ND; 5. IP-12 - NS from 4; 6. IP-13 - 9,573 from 16,709; 7. IP-14 - 698 from 1; 8. IP-15 - NS from 8; 9. IP-16 - 10,493 from 15,192; 10. IP-17 - 15,975 from 21,462; 11. IP-18 - 8,009 from 10,012; 12. IP-19 - 50 from 71; 13. MW-1 - 1,705 from 1,772; 14. MW-2 - 808 from 1,052; 15. MW-3 - 22 from 1; 16. MW-4 - 2,299 from 325; 17. MW-5 - 6,556 from 6,438; 18. MW-6 - NS from 48; 19. MW-7 - 28 from 15; 20. MW-8 - 3 from ND; 21. RXMW-1 - 2 from ND; 22. VP-1 - NS from 12; 23. VP-2 - NS from 62. Total VOC groundwater concentrations in Site wells have increased slightly, since the April 2011 bioinjections. Based on the latest round of groundwater samples collected on March 27, 2012, monitoring wells MW-01 through MW-05 and MW-07 reported VOC concentrations above AWQSGVs. Total VOC concentrations in wells IP-13, IP-14, and IP-16 through IP-19 also reported increased VOC concentrations above AWQSGVs in March 2012. The latest round of groundwater sampling results shows an increase in total VOC concentrations at 14 wells, however, most of the wells are still below pre-injection concentrations. This indicates that the bioremediation injections completed in January and April 2011 had an impact in reducing overall contaminant levels. Although soil samples were not collected during the monitoring period; historically, soils collected from the Site are impacted with petroleum related VOCs at a depth just above or below the Site's water table (17-20 ft. bgs); soil samples collected January 2011 ranged from non-detectable to 3,611,000 ug/kg. Groundwater seasonal fluctuations of up to 4 feet potentially allow VOC contamination sorbed in the soil to be released as a dissolved-phase contamination to the Site. The observed rebound of VOC concentrations indicates that biological activity may be decreasing or fluctuations in groundwater levels at the Site are contributing to total VOCs increase. As a result, LiRo completed a 3rd bioremediation injection in June 2012. No free-phase product was detected in any wells during the December March 2012 monitoring period. Historically, Site wells IP-17 and MW-07 have had free-phase product detected; free-phase product has not been observed in these two since April 2011. LiRo will continue routine quarterly groundwater sampling of monitoring wells MW-01 through MW-08, RXMW-01, IP-09, IP-13, IP-14, and IP-16 through IP-19 for CP-51 list VOCs plus MTBE and Naphthalene. There are currently no proposals requiring NYSDEC approval. AD 01/25/2013: Received a monitoring report for a period of April - August 2012. DL to eDocs. Will review. AD 02/19/2013: Reviewed the report. It states that the Site monitoring program for the period of April 1, 2012 through August 31, 2012, required quarterly water level gauging from accessible site wells and quarterly sampling from monitoring wells MW-01 through MW-08, RXMW-01, and injection wells IP-08, IP-09, IP-13, IP-14 and IP-16 through IP-19 for analysis for VOCs, MTBE and Naphthalene. Samples were collected on May 30-31, June 4 and August 27-28, 2012. Three wells (MW-04, IP-08 and RXMW-01) were not sampled during the monitoring period, MW-04 was dry during both sampling events and access to IP-08 and RXMW-01 were obstructed by equipment during sampling event on August 27. The latest interpreted groundwater flow (August 27, 2012) is similar to previous sampling events with an

**S105054679**

overall flow toward the south/southwest. On May 30-31 and June 4, 2012, pre-bio injection groundwater samples were collected from wells IP-13, IP-14, IP-16 through IP-19, MW-01 through MW-03, MW-05 through MW-08 and RXMW-01. On June 8, 2012, a third round of bio injection was performed at the site. As with the previous injection events, 100 pounds of CBN nutrient mix were mixed with potable water and 3 gallons of PetroBac, and then injected under pressure over the length of the well screen. The full amount of nutrient mix and bacteria was dispensed at all the injection points and 50 gallons of potable water followed the injections. On August 27, 2012, groundwater samples were collected from wells IP-13, IP-14, IP-16 through IP-19, MW-01 through MW-03 and MW-05 through MW-08. Wells MW-04, RXMW-01 and IP-08 were not sampled during the August 2012 sampling period, MW-04 was dry at the time of sampling and RXMW-01 and IP-08 were inaccessible due to equipment placement. The results of the August 2012 sampling reported one or more VOC above AWQSGVs in each of the six sampled injection wells IP-13, IP-14, and IP-16 through IP-19. Total VOC concentrations ranged from 23 ug/L in well IP-09 to 24,300 ug/L in well IP-17. The groundwater samples collected from monitoring wells MW-01 through MW-03 and MW-05 through MW-08 reported VOCs above AWQSGVs at six of the seven sample locations. Total VOC concentrations ranged from non-detectable in well MW-07 to 6,571 ug/L in well MW-05. When compared to previous quarterly results, seven of the fourteen groundwater samples collected have experienced increased total VOC concentrations. LiRo concludes that TVOCs in site wells have increased in seven of the fourteen wells, since the June 2012 bio-injections. Based on the latest round of groundwater samples collected on August 27, 2012, monitoring wells MW-01 through MW-03, MW-05 and MW-07 reported one or more VOC analytes above AWQSGVs. Though most wells are below the February 2011 pre-injection concentrations. No soil samples were collected during the monitoring period. No free-phase product was detected in any wells during the April August 2012 monitoring period. Historically, site wells IP-17 and MW-07 have experienced free-phase product; though free-phase product has not been observed in the two wells, since April 2011 LiRo will continue routine quarterly groundwater sampling of monitoring wells MW-01 through MW-1, RXMW-01, IP-09, IP-13, IP-14, and IP-16 through IP-19 for CP-51 list VOCs plus MTBE and Naphthalene. " LiRo will perform enhanced fluid recovery (EFR) on all available Site wells. EFR will be conducted twice a month for six (6) months. The Site will then be evaluated to see if contaminate levels have decreased. Proposals " There are currently no proposals requiring NYSDEC approval AD 08/05/2013: Received a monitoring report for a period of September 2012 - March 2013. DL to eDocs. Will review. AD 09/10/2013: Reviewed the report. It states that the site is currently on a quarterly groundwater sampling and monitoring program. Groundwater sampling during this monitoring period was conducted in December 2012 and March 2013. GW samples were collected from monitoring wells MW-01 through MW-08, RXMW-01, and injection wells IP-09, IP-13, IP-14 and IP-16 through IP-19 for analysis of CP-51 list VOCs, MTBE and Naphthalene. Samples were collected on December 18-19, 2012 and March 13-14, 2013. For the monitoring period of December and March, monitoring well MW-04 was unable to be sampled due to the fact that the well was dry during both sampling events. On March 13, 2013, LiRo gauged all available monitoring wells. Six wells (MW-03, MW-04, MW-08, RXMW-01, IP-13 and IP-14) were unable to be gauged because the monitoring wells were covered by various pieces of

MAP FINDINGS

**QUEENS EAST 10 DOS -DDC (Continued)**

**S105054679**

equipment or were unable to be located. EFRs: On February 26, 2013, LiRo began performing bi-monthly Enhanced Fluid Recovery (EFR) Operations on selected monitoring wells (IP-13, IP-16, IP-17, IP-18, MW-01, MW-05 and MW-07). The wells were selected due to their high VOC concentrations. The concept behind this operation is to flush VOCs from the smear zone, by the migrating groundwater. Each well was purged for 30 minutes or until the well went dry. On February 26, March 11 and March 28, 2013, LiRo removed approximately 426-gallons, 232-gallons and 761-gallons, respectively, of contaminated water from the seven selected monitoring wells. December 2012: On December 18, 2012, groundwater samples were collected from wells IP-09, IP-13, IP-16 through IP-19, MW-01 through MW-03, MW-05 through MW-08 and RXMW-01. Monitoring well MW-04 was dry during the sampling event. Results of the December 2012 sampling, reported multiple VOCs above AWQSGVs in all six (6) sampled injection wells, IP-09, IP-13, and IP-16 through IP-19. Total VOC (TVOC) concentrations ranged from 32 ug/L in well IP-09 to 24,133 ug/L in well IP-17. The groundwater samples collected from monitoring wells MW-01 through MW-03, MW-05 through MW-08 and RXMW-01 reported VOCs above AWQSGVs at five (5) of the eight (8) sample locations. TVOC concentrations ranged from nondetectable in wells MW-07, MW-08 and RXMW-01 to 12,405 ug/L in well MW-05. When compared to previous quarterly total VOC concentrations, seven (7) of the fourteen groundwater injection points or monitoring wells reported a general decrease in TVOC or remained the same. Seven wells reported an increase in TVOC concentration from the previous sampling event. March 2013 GW sampling: On March 13, 2013, groundwater samples were collected from fifteen monitoring wells, IP-09, IP-13, IP-14, IP-16 through IP-19, MW-01 through MW-03, MW-05 through MW-08 and RXMW-01. Well MW-04 was not sampled during the sampling period, due to the well being dry. Results of the March 2013 sampling, reported multiple VOCs above AWQSGVs in six (6) of the seven sampled injection wells. TVOC concentrations ranged from 9 ug/L in well IP-09 to 17,932 ug/L in well IP-17. The groundwater samples collected from monitoring wells MW-01 through MW-03, MW-05 through MW-08 and RXMW-01 reported VOCs above AWQSGVs at five (5) of the eight (8) sample locations. TVOC concentrations ranged from non-detectable in well RXMW-01 to 6,614 ug/L in well MW-05. When compared to the previous quarterly results, thirteen (13) of the fifteen (15) groundwater samples reported either a decrease in TVOC concentrations by almost 50% (i.e., IP-13, IP-16, MW-01, MW-02, MW-05 and MW-06) or remained similar to historical values, however, monitoring well IP-19 reported its second consecutive increase and reported a 20% increase in TVOC from the previous monitoring period. CONCLUSIONS During the December 2012 sampling event, TVOC concentration were reported at their highest record levels for four of the fourteen sampled wells. This increase in concentration could be the result of water levels being low for three consecutive monitoring periods. LiRo implemented EFR to address the increasing contaminant levels. During the March 2013 sampling, concentrations have since decreased. Current VOC concentrations indicate that the petroleum plume is stable within the contamination area, wells upgradient and down-gradient to the area report non-detectable to minor VOC concentrations. No soil samples were collected during the monitoring period of September 2012 through March 2013. No free-phase product was detected in any wells during the September 2012 March 2013 monitoring period. Historically, free-phase product has been detected in the Site wells IP-17 and

MAP FINDINGS

QUEENS EAST 10 DOS -DDC (Continued)

S105054679

MW-07; though free-phase product has not been observed in the two wells since April 2011. EFR was completed on February 26, March 11 and March 28, 2013. LiRo removed approximately 1,400-gallons of contaminated water from the seven (7) selected Site wells, associated with high VOC concentrations. Further monitoring is needed to determine if EFR will have a long term impact to the VOC levels at the Site. Recommendations: Actions " Continue routine quarterly groundwater sampling of monitoring wells MW-01 through MW-08, RXMW-01, IP-09, IP-13, IP-14, and IP-16 through IP-19 for CP-51 list VOCs plus MTBE and Naphthalene. " LiRo will continue with EFR on the selected Site monitoring wells, twice a month. The Site will then be evaluated to see if contaminate levels have decreased. Proposals " Discontinuation of bio parameter analysis associated with the 5 monitoring wells, MW-01, MW-02, MW-04, MW-05 and MW-06. AD 11/22/2013: Received a monitoring report for a period of April to August 2013. DL to eDocs. Will review. AD 12/05/2013: Reviewed the report. It states that the Site is currently on a quarterly groundwater sampling and monitoring program. The depth to groundwater at this Site ranges from approximately 15 to 16 feet bgs with a seasonal fluctuation of up to approximately 4 feet. Groundwater elevations for June 21, 2013, ranged from 0.65 to 1.67 feet above mean sea level (amsl). Two localized lows were observed at monitoring wells MW-05 and MW-06. On August 28, 2013 groundwater elevation were reported to range from 0.03 to 1.03 feet amsl. The interpreted groundwater flow direction for both the June 21, 2013, and August 28, 2013, gauging events is generally to the south and are similar to historic gauging events. GW sampling: Between August 28 and 29, 2013, LiRo gauged accessible Site monitoring points and collected groundwater samples from fifteen (15) of sixteen (16) locations listed on the Site Monitoring Program. A groundwater sample was not collected from MW-04 since the well was dry. Results of the August 2013 sampling, reported one or more VOCs above AWQSGVs in 11 of the 15 samples: MW-01, MW-02, MW-03, MW-05, MW-06, IP-13, IP-14, IP-16, IP-17, IP-18 and IP-19. August 2013 TVOC concentrations ranged from non-detect (ND) in 3 wells (MW-07, MW-08 and RXMW-01) to moderate levels in MW-02, MW-05 and IP-14 to highly elevated levels in 7 site wells (22,122 ug/L) in well IP-17. GW data Well ID 3/2013 8/2013 MW-01 3,723 3,092 MW-02 347 262 MW-03 70 67 MW-04 Dry MW-05 6,614 328 MW-06 7 11,708 MW-07 475 ND MW-08 2 ND RXMW-01 ND ND IP-09 9 13 IP-13 7,481 14,278 IP-14 170 895 IP-16 6,005 5,110 IP-17 17,932 22,122 IP-18 14,485 20,784 IP-19 4,360 3,838 EFR: Between April 2013 and August 2013, EFR events were conducted on April 11, 2013, April 29, 2013, and May 15, 2013. EFR was not conducted between June 2013 and August 2013 due to sub-contract rebidding. It will resume in the fall. On April 11, April 29 and May 15, 2013, LiRo removed approximately 748-gallons, 486-gallons and 788-gallons, respectively, of contaminated water from the seven locations: IP-13, IP-16, IP-17, IP-18, MW-01, MW-05 and MW-07. An EFR vacuum was applied to each well for between 30 and 45 minutes or until the well went dry. No free-phase product was observed before or after the application of EFR in any of the 7 locations. Four of the seven wells (MW-01, MW-05, MW-07 and IP-16) included in the EFR program have reported a decrease or no change in TVOC concentration. Monitoring well, MW-07 reported ND levels of VOCs during the August 2013 sampling event, whereas, during the previous sampling event (March 2013) TVOCs was reported at 475 ?g/L. Three wells, IP-13, IP-17 and IP-18 have reported increases in TVOCs between the March 2013 and August 2013 sampling events. LiRo

MAP FINDINGS

QUEENS EAST 10 DOS -DDC (Continued)

S105054679

will perform additional groundwater sampling to determine if the changes in TVOCs are the result of the EFR program. Based on the data, LiRo states that during the August 2013 sampling event, nine of the fifteen wells have reported decreasing or non-detect TVOCs. According to the consultant, current VOCs indicate that the petroleum plume is stable within the contamination area, because wells up-gradient and down-gradient to the area report nondetectable or low TVOC concentrations. Based on the conclusions cited above, LiRo recommends the following: - Continue routine quarterly groundwater sampling of Sixteen (16) Site wells: MW-01 through MW-08, RXMW-01, IP-09, IP-13, IP-14, and IP-16 through IP-19. Submit all samples for analysis of the NYSDEC CP-51 list VOCs. - Complete the remaining EFR event at the 7 select locations: IP-13, IP-16, IP-17, IP-18, MW-01, MW-05 and MW-07. There are no proposals that require the NYSDEC approval at this time. AD 01/17/2014: Received a monitoring report for a period of September to November 2013. DL to eDocs. Will review. AD 02/12/2014: Reviewed the report. The report states that the site is currently on a quarterly groundwater sampling and monitoring program. Groundwater sampling during this monitoring period was conducted on November 18, 2013. LiRo gauged accessible wells and collected groundwater samples from fifteen (15) of sixteen (16) sampling locations. Samples were collected from MW-01 through MW-03, MW-05 through MW-08 and RXMW-01, IP-09, IP-13, IP-14 and IP-16 through IP-19. A groundwater sample was not collected from MW-04 since the well was found to be dry prior to purging. GW Data: Results of the November 2013 sampling, reported one or more VOCs above AWQSGVs in twelve of the 15 samples. Wells or injection points MW-01, MW-02, MW-03, MW-05, MW-06, MW-07, IP-13, IP-14, IP-16, IP-17, IP-18 and IP-19 reported one or more VOCs above the NYSDEC AWQSGVs. November 2013 TVOCs ranged from non-detect in wells MW-08, RXMW-01 and IP-09 to 92,680 ppb in IP-18. GW data Well ID 3/2013 8/2013 11/2013 MW-01 3,723 3,092 2,195 MW-02 347 262 295 MW-03 70 67 383 MW-04 Dry Dry MW-05 6,614 328 4,980 MW-06 7 11,708 2,542 MW-07 475 ND 36 MW-08 2 ND ND RXMW-01 ND ND ND IP-09 9 13 ND IP-13 7,481 14,278 5,460 IP-14 170 895 2,121 IP-16 6,005 5,110 629 IP-17 17,932 22,122 498 IP-18 14,485 20,784 92,680 IP-19 4,360 3,838 1,773 When compared to the previous quarterly sampling (August 2013), nine of the fifteen samples reported either a decrease or no change in TVOCs: MW-01, MW-06, MW-08, RXMW-01, IP-09, IP-13, IP-16, IP-17 and IP-19. Conversely, six wells/injection points reported an increase in TVOCs: MW-02, MW-03, MW-05, MW-07, IP-14 and IP-18. IP-18 reported the highest inter-well (i.e. site-wide) TVOCs for all sampling locations since April 2001. The second highest inter-well TVOCs(30,538 ppb) was reported for the IP-13 sample in April 2011. The core of the on-site dissolved-phase plume is generally defined by Site wells: MW-01, MW-05, MW-06, IP-13, IP-16, IP-17, IP-18 and IP-19. Down-gradient wells (MW-08 and RXMW-01) have consistently reported non-detectable to very low ( less than 15 ppb) TVOCs indicating that the TVOC petroleum plume is stable and not migrating off-site. Typical depths to groundwater range from approximately 15 to 21 feet bgs with a seasonal fluctuation of up to approximately 4 feet. Depth to groundwater measurements for November 18, 2013, ranged from 17.76 feet to 20.43 feet. The interpreted groundwater flow direction for November 18, 2013, gauging event is generally to the south. Between September 2013 and November 2013, two EFR events were conducted at the Site on September 10, 2013, and October 10, 2013, which completed the 6-month EFR program. While EFR was generally effective in

MAP FINDINGS

**QUEENS EAST 10 DOS -DDC (Continued)**

**S105054679**

reducing TVOC concentrations in 6 of 8 wells in the EFR Pilot Test Program, the magnitude of the reported petroleum related impacts in Site groundwater suggests that remediation by period application of EFR will not be adequate to reduce Site contamination in a timely manner. Consequently, LiRo will evaluate whether the installation and operation of an active AS/SVE remedial system is warranted for the Site. No free-phase product was detected in any wells during the September 2013 to November 2013 monitoring period. Historically, free-phase product has been detected in the Site wells IP-17 and MW-07; though free-phase product has not been observed in the two wells, since April 2011. November 2013 groundwater TVOC results indicate a stable groundwater dissolved plume that is not migrating off-site. Based on the conclusions cited above, LiRo recommends the following: - Continue routine quarterly groundwater sampling of 16 site wells: MW-01 through MW-08, RXMW-01, IP-09, IP-13, IP-14 and IP-16 through IP-19. Submit all samples for analysis of the NYSDEC CP-51 list VOCs. - LiRo will evaluate whether the installation and operation of an active AS/SVE remedial system is warranted for the Site. If warranted, LiRo will prepare and submit, for NYSDEC approval, a Design Analysis Report (DAR) for an AS/SVE remedial system as proposed by Shaw in April 2003 and approved by the NYSDEC in March 2004. There are no proposals that require the NYSDEC approval. AD 06/05/2014: Received a Quarterly Monitoring Report for the period December 2013- February 2014. Will review. AD 07/24/2014: Reviewed the report. It states that the site is currently on a quarterly groundwater sampling and monitoring program. The interpreted groundwater flow direction for January 27, 2014, gauging event is generally to the south and is similar to historic gauging events. The typical hydraulic gradient is approximately 0.008 feet per foot (ft/ft). GW sampling: The Site monitoring program for the period of December 1, 2013, through February 28, 2014, required quarterly water level gauging from accessible site wells and quarterly sampling from sixteen (16) locations: MW-01 through MW-08, RXMW-01, and injection wells IP-09, IP-13, IP-14 and IP-16 through IP-19. Groundwater sampling during this monitoring period was conducted on January 17, 2014. On this date, LiRo gauged accessible Site wells and collected groundwater samples from fifteen out of sixteen site wells. All samples were submitted for analysis of the NYSDEC CP-51 list of VOCs and results were compared to the NYSDEC AWQSGVs. A groundwater sample was not collected from MW-04 since the well was found to be dry prior to purging. This well MW-04 was dry and unable to be sampled during the June 2013, August 2013, November 2013 and January 2014 gauging events. GW data: Results of the January 2014 sampling, reported one or more VOCs above AWQSGVs in 12 of the 15 samples. Monitoring wells or injection points MW-01, MW-02, MW-03, MW-05, MW-06, IP-09, IP-13, IP-14, IP-16, IP-17, IP-18 and IP-19 reported one or more VOC concentration above the NYSDEC AWQSGVs. Groundwater samples collected from monitoring wells MW-07, MW-08 and RXMW-01 reported no CP-51 list VOCs at concentrations above AWQSGVs. January 2014 TVOC concentrations ranged from ND in monitoring well RXMW-01 to 24,114 ug/L in IP-17. When compared to the previous quarterly sample results (November 2013), 8 of the 15 groundwater samples reported either a decrease or no change in TVOC concentrations: MW-02, MW-03, MW-06, MW-07, RXMW-01, IP-14, IP-18 and IP-19. Conversely, 7 wells/injection points reported an increase in TVOC concentrations: MW-01, MW-05, MW-08, IP-09, IP-13, IP-16 and IP-17. While increases were observed, no TVOC concentration was

MAP FINDINGS

**QUEENS EAST 10 DOS -DDC (Continued)**

**S105054679**

reported above a past high TVOC concentration at any of the monitoring wells/injection points. According to the report, the core of the on-site dissolved-phase plume is generally defined by Site wells: MW-01, MW-05, MW-06, IP-13, IP-16, IP-17, IP-18 and IP-19. Downgradient wells (MW-08 and RXMW-01) have consistently reported ND to very low (100 ug/L) TVOC concentrations reported from these locations: 475 ug/L at MW-07 (March 2013) and 383 ug/L at MW-03 (November 2013). Historically, the core dissolved-phase plume TVOC concentrations have been generally consistent with the exception of the reported November 2013 TVOC concentration at IP-18. Conclusions: No free-phase product was detected in any wells during the December 2013 to February 2014 monitoring period. Historically, free-phase product has been detected in the Site wells IP-17 and MW-07; though free-phase product has not been observed in the two wells, since April 2011. January 2014 groundwater TVOC results indicate a stable groundwater dissolved plume that is not migrating off-site. During the November 2013 sampling event, TVOCs were reported at their highest individual record concentrations in two site wells: MW-03 and IP-18. However, January 2014 reported TVOC concentrations for both these locations have returned to their typical ranges with the IP-18 TVOCs reported at 15,440 ug/L and the MW-03 TVOC concentration reported at 95 ug/L. Based on the conclusions cited above, LiRo recommends the following: - Continue routine quarterly groundwater sampling of Sixteen (16) Site wells: MW-01 through MW-08, RXMW-01, IP-09, IP-13, IP-14 and IP-16 through IP-19. Submit all samples for analysis of NYSDEC CP-51 list VOCs. - LiRo will evaluate whether the installation and operation of an active AS/SVE remedial system is feasible. An AS/SVE pilot test is scheduled for 3rd quarter 2014. If the pilot test determines that AS/SVE is feasible, LiRo will prepare and submit, for NYSDEC approval, a Design Analysis Report (DAR) for an AS/SVE remedial system. AS/SVE was previously proposed by Shaw in April 2003 and approved by the NYSDEC in March 2004. There are no proposals that require the NYSDEC approval. AD 09/16/2014: Received the following e-mail from LiRo: Ms. Doronova, The Quarterly Monitoring Report for Spill No. 9909675, DSNY Queens East 12 Garage, 130-23 150th Avenue, South Ozone Park, New York, has been uploaded for your review to LiRo s website on September 16, 2014. A link to the website is included: <https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573> The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at franks@liro.com or myself if you need additional information. Sincerely, Martha DeLozier Will review. AD 10/28/2014: Reviewed the report. It states that on April 9, 2014, LiRo collected background ambient air quality samples and baseline soil gas samples for use in the design of an AS/SVE system. Typical depths to groundwater range from approximately 19 to 22 feet with a seasonal fluctuation of up to approximately 4 feet. Depth to groundwater measurements for April 15, 2014, ranged from 17.18 feet to 20.00 feet and groundwater elevations ranged from 0.26 to 1.30 feet above mean sea level. The interpreted groundwater flow direction for April 15, 2014, gauging event is generally to the south and is similar to historic gauging events. The typical hydraulic gradient is approximately 0.008 feet per foot. On April 15, 2014, LiRo gauged accessible Site monitoring points and collected groundwater samples from fifteen out of sixteen locations listed on the Site Monitoring Program (MW-01 through MW-08, RXMW-01, and injection wells IP-09,

**S105054679**

IP-13, IP-14 and IP-16 through IP-19). A groundwater sample was not collected from MW-04 since the well was found to be dry prior to purging. All samples were submitted for analysis of the NYSDEC CP-51 list of VOCs and results were compared to the NYSDEC AWQSGVs. GW data: Results of the April 2014 sampling reported one or more VOCs above AWQSGVs in eleven (11) of the 15 samples. Monitoring wells or injection points MW-01, MW-02, MW-03, MW-05, MW-06, IP-13, IP-14, IP-16, IP-17, IP-18 and IP-19 reported one or more VOC concentration above the NYSDEC AWQSGVs. Groundwater samples collected from monitoring wells MW-07, MW-08, RXMW-01 and IP-09 reported no CP-51 list VOCs at concentrations above AWQSGVs. April 2014 TVOC concentrations ranged from ND in wells MW-08 and RXMW-01 to 16,471 ug/L in IP-18. When compared to the previous results (January 2014), twelve (12) of the 15 samples reported either a decrease or no change in TVOCs: MW-01, MW-03, MW-05, MW-06, MW-07, MW-08, RXMW-01, IP-09, IP-13, IP-14, IP-16, and IP-17. Conversely, three (3) wells/injection points reported an increase in TVOCs: MW-02, IP-18 and IP-19. While increases were observed, no TVOCs were reported above a high TVOCs from the previous sampling at any of the monitoring wells/injection points. AIR SPARGING AND SOIL VAPOR EXTRACTION: In March 2004 NYSDEC approved AS/SVE for remediation of petroleum contamination at the Site. A Design Analysis Report (DAR) for the AS/SVE system dated July 2004 was prepared by Shaw Environmental & Infrastructure Engineering of New York P.C. (Shaw). The AS/SVE system was not constructed and in previous QMR LiRo stated that this technology will be reviewed for consideration as a remedial option at the site. LiRo reviewed the NYSDEC approved DAR (Shaw 2004) for the AS/SVE system and concluded that AS/SVE continues to be a feasible technology for the Site. However, additional data was required to fill data gaps and verify the Shaw design. This included collection of indoor air and sub-slab soil gas samples to establish baseline air quality conditions and an AS/SVE Pilot Test to confirm site conditions and verify the radius of influence (ROI) of the system. The indoor soil vapor intrusion sampling was completed by LiRo on April 9, 2014. Three air samples were obtained: one ambient air sample from an outdoor location, one ambient air sample from an indoor location and one soil gas sample from below the garage floor slab. The air samples were analyzed for CP-51 VOCs by USEPA method TO-15. LiRo completed the AS/SVE pilot test in July of 2014. A Remedial Action Work Plan that includes the results of the AS/SVE pilot test will be submitted to NYSDEC for review. Based on the data, LiRo recommends the following Actions and Proposals: Actions - Continue routine quarterly groundwater sampling of Sixteen (16) site wells: MW-01 through MW-08, RXMW-01, IP-09, IP-13, IP-14 and IP-16 through IP-19. Submit all samples for analysis of NYSDEC CP-51 list VOCs. - LiRo will prepare and submit, for NYSDEC approval, a Remedial Action Work Plan for an AS/SVE remedial system that includes the results of the July 2014 AS.SVE pilot test and a conceptual design. AS/SVE was previously proposed by Shaw in April 2003 and approved by the NYSDEC in March 2004. There are no proposals that require the NYSDEC approval. AD 11/13/2014: Received the following e-mail from LiRo: Ms. Doronova, The Quarterly Monitoring Report and Air Sparge/Soil Vapor Extraction Pilot Test Results for Spill No. 9909675, DSNY Queens East 12 Garage, 130-23 150th Avenue, South Ozone Park, New York, has been uploaded for your review to LiRo s website on November 13, 2014. A link to the website is included: <https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=>

573 The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at [franks@liro.com](mailto:franks@liro.com) or myself if you need additional information. Sincerely, Martha DeLozier Will review. AD 12/19/2014: Reviewed the report. It states that typical depths to groundwater at the site range from approximately 16 to 22 feet with seasonal fluctuations in individual wells of up to 4 feet. Depth to groundwater measurements for July 16, 2014, ranged from 16.83 feet to 19.59 feet and groundwater elevations ranged from 0.18 to 1.79 feet above mean sea level. The interpreted groundwater flow direction is generally to the south and is similar to historic gauging events. Between July 16 and 17, 2014, groundwater samples were collected from fifteen (15) of sixteen (16) sampling locations. Samples were collected from MW-01 through MW-03, MW-05 through MW-08 and RXMW-01, IP-09, IP-13, IP-14 and IP-16 through IP-19. A sample was not collected from monitoring well MW-04 since the well was found to be dry. Results of the July 2014 sampling reported one or more VOCs above AWQSGVs in ten (10) of the 15 samples. Monitoring wells or injection points MW-01, MW-02, MW-05, MW-06, IP-13, IP-14, IP-16, IP-17, IP-18 and IP-19 reported one or more VOC concentration above the NYSDEC AWQSGVs. Groundwater samples collected from wells MW-03, MW-07, MW-08, RXMW-01 and IP-09 reported no CP-51 list VOCs at concentrations above AWQSGVs. July 2014 TVOCs ranged from ND in wells MW-07, MW-08 and IP-09 to 11,486 ug/L in IP-17. Groundwater Summary: The core of the on-site dissolved-phase plume is generally defined by Site wells: MW-01, MW-05, MW-06, IP-13, IP-16, IP-17, IP-18 and IP-19. Downgradient wells (MW-08 and RXMW-01) have consistently reported ND to very low (100 ug/L) TVOCs reported from these locations: 475 ug/L at MW-07 (March 2013) and 383 ug/L at MW-03 (November 2013). CONCLUSIONS No free-phase product was detected in any wells during the monitoring period. Historically, free-phase product has been detected in the site wells: IP-17 and MW-07; though free-phase product has not been observed in these locations since April 2011. July 2014 groundwater TVOC results indicate no discernable trends in the groundwater dissolved plume and the plume is not migrating off-site. July 2014 pilot tests report an AS and SVE radius of influence of 20-feet. RECOMMENDATIONS Based on the conclusions cited above, LiRo recommends the following actions: - Continue routine quarterly groundwater sampling of 16 site wells: MW-01 through MW-08, RXMW-01, IP-09, IP-13, IP-14 and IP-16 through IP-19. Submit all samples for analysis of NYSDEC CP-51 list VOCs. - Complete Remedial Work Plan / Design Analysis Report for the AS/SVE system and submit for NYSDEC approval. There are no proposals that require NYSDEC approval at this time. AD 04/10/2015: Received the following e-mail from LiRo: Ms. Doronova, The Quarterly Monitoring Report for Spill No. 9909675, DSNY Queens East 12 Garage, 130-23 150th Avenue, South Ozone Park, New York, has been uploaded for your review to LiRo s website on April 10, 2015. A link to the website is included: <https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573> The report includes a proposal that requires your review and approval. 716.882.5476 [T] - 716.882.9640 [F] - www.liro.com Will review. AD 05/19/2015: Reviewed the report. The Site monitoring program (SMP) for the period of September 1, 2014, through February 28, 2015, required quarterly water level gauging from accessible Site wells and quarterly sampling from sixteen (16) locations: MW-01 through MW-08, RXMW-01, and injection wells IP-09, IP-13, IP-14 and IP-16 through IP-19. On October 14, 2014, LiRo gauged accessible Site monitoring points and collected groundwater samples from fifteen out of sixteen wells locations. Prior to sampling, each well was purged of at least three well volumes or until the well went dry. The groundwater samples were submitted for analysis of CP-51 list VOCs and groundwater analytical results were compared to AWQSGVs. A groundwater sample was not collected from MW-04 since the well was found to be dry prior to purging. On January 12, 2015, LiRo gauged accessible Site monitoring points but was unable to collect groundwater samples due to NYCDDC delays in funding for the new PW348-64 contract. On February 13, 2015, LiRo gauged accessible Site monitoring points but was unable to collect groundwater samples due to NYCDDC delays in funding for the new PW348-64 contract. GW levels: For the monitoring period, groundwater gauging was conducted on October 14, 2014, January 12, 2015, and February 13, 2015. Typical depths to groundwater range from approximately 16 to 22 feet with seasonal fluctuations in individual wells of up to 4 feet. Depth to groundwater measurements for October 14, 2014, ranged from 15.37 feet to 18.23 feet and groundwater elevations ranged from 2.11 to 2.98 feet above mean sea level (AMSL). The interpreted groundwater flow direction is generally to the south and is similar to historic gauging events. Depth to groundwater measurements for January 12, 2015, ranged from 15.24 feet to 18.07 feet and groundwater elevations ranged from 2.27 to 3.26 feet above mean sea level (AMSL). The interpreted groundwater flow direction is generally to the south and is similar to historic gauging events. Depth to groundwater measurements for February 13, 2015, ranged from 15.15 feet to 16.95 feet and groundwater elevations ranged from 2.68 to 3.80 feet above mean sea level (AMSL). The interpreted groundwater flow direction is generally to the south and is similar to historic gauging events. GW data: Results of the October 2014 sampling reported one or more VOCs above AWQSGVs in nine (9) of the 15 samples. Monitoring wells or injection points MW-01, MW-02, MW-05, MW-06, IP-13, IP-16, IP-17, IP-18 and IP-19 reported one or more VOCs concentration above their respective NYSDEC AWQSGVs. Groundwater samples collected from monitoring wells MW-03, MW-07, MW-08, RXMW-01, IP-09 and IP-14 reported no CP-51 list VOCs at concentrations above AWQSGVs. October 2014 TVOC concentrations ranged from ND in wells MW-07, MW-08, RXMW-01 and IP-09 to 11,556 ug/L in injection point IP-17. When compared to the previous quarterly sample results (July 2014), twelve (12) of the 15 groundwater samples reported either a decrease or no change in TVOC concentrations: MW-01, MW-02, MW-05, MW-06, MW-07, MW-08, RXMW-01, IP-09, IP-13, IP-14, IP-16, and IP-18. Conversely, three (3) wells/injection points reported an increase in TVOC concentrations: MW-03, IP-17 and IP-19. While increases were observed, no TVOC concentration was reported above a past high TVOC concentration at any of the monitoring wells/injection points. Groundwater Summary: Well TVOCs in ppb 1. MW-1 571 2. MW-2 41 3. MW-3 5 4. MW-5 2,764 5. MW-6 20 6. MW-7 ND 7. MW-8 ND 8. RXMW-1 ND 9. IP-9 ND 10. IP-13 4,963 11. IP-14 5 12. IP-16 5,522 13. IP-17 11,556 14. IP-18 9,570 The core of the on-site dissolved-phase plume is generally

MAP FINDINGS

**QUEENS EAST 10 DOS -DDC (Continued)**

**S105054679**

defined by Site wells: MW-01, MW-05, MW-06, IP-13, IP-16, IP-17, IP-18 and IP-19. Downgradient wells (MW-08 and RXMW-01) have consistently reported non-detectable (i.e. ND) to very low (100 ug/L) TVOC concentrations reported from these locations: 475 ug/L at MW-07 (March 2013) and 383 ug/L at MW-03 (November 2013). Conclusions: According to LiRo, installation and operation of an AS/SVE system, in the area with the highest levels of VOCs, would create an unacceptable level of risk to human health due to the potential for induced soil vapor migration and intrusion into the occupied office and operational spaces at the Site. Consequently, LiRo has dismissed further consideration of an AS/SVE system for this Site and has completed a draft ISCO injection work plan to address residual soil and dissolved phase groundwater VOCs at the Site, as an alternative remedial technology. The ISCO work plan is provided in the attachment. For the monitoring period, groundwater samples were collected in October 2014 but as noted above, the performance of field activities have been impacted at the Site due to NYCDDC delays in funding for the new PW348-64 contract. As a result of these delays, the following site activities were not completed during this monitoring period: - Groundwater sampling, previously scheduled for January 2015. Based on the conclusions cited above, LiRo recommends the following Actions and Proposals: Actions - Continue routine quarterly groundwater gauging and resume quarterly sampling, in March 2015, of Sixteen (16) Site wells: MW-01 through MW-08, RXMW-01, IP-09, IP-13, IP-14 and IP-16 through IP-19. Submit all samples for analysis of NYSDEC CP-51 list VOCs. - Continue routine quarterly reporting of groundwater gauging and sampling conducted at the site. Proposals There is one proposal that requires NYSDEC approval: - In-Situ Chemical Oxidation (ISCO) Remedial Work Plan. Will review. AD 06/02/2015: Reviewed the work plan. LiRo proposes completing up to four (4) rounds of ISCO injections to remediate residual soil and dissolved phase groundwater VOCs at the Site. Existing and new injection points (IP) are proposed to be used/completed in the vicinity of the Garage entrance sidewalk along the north side of 150th Avenue (exterior) and the southern end of Garage Bay 12A (interior) which is currently used for the refueling and maintenance of DSNY vehicles. Each round of ISCO injections will be completed via a series of up to 20 IPs, which will include up to twelve (12) existing IPs (i.e. IP-05, IP-07, IP-09, IP-10, IP-11 and IP-13 through IP-19) and up to eight (8) new IPs (i.e. IP-20 through IP-27) as appropriate or necessarily (see Figure 3). Each new IP will be set to a total of depth of 25 feet bgs with a screen interval between 15 and 25 feet bgs. A bentonite seal will be installed above the well screen and filter pack through the entire vadose zone to prevent contamination migration to the surface. For each injection round, a combination of NaOH and a proprietary oxidant (i.e. Klozur Persulfate) will be injected into the subsurface at 25% and 20% concentration solutions (by weight), respectfully. The anticipated radius of influence for each injection point is conservatively estimated to be 5-feet. Before beginning subsurface injections, the drilling subcontractor will be required to complete utility clearance prior to initiating the work. The utility clearance will mark and identify all public underground utilities and temporary injection points. The proposal to use most contaminated injection wells for application of chemical oxidant is questionable. It may interfere with monitoring of the effectiveness of the remediation. The wells IP-13, IP-16, IP-17 and IP-18 should be left out of the injection

program. Will discuss the WP with J. Kolleeny of DEC. AD 06/11/2015: Discussed the work plan with J. Kolleeny of DEC. Will check the soil data and depth of the detected contamination. AD 06/15/2015: According to soil data all detected soil contamination is located in the smear zone. Will issue an approval letter for the WP. AD 06/16/2015: Issued and sent an approval letter to Jerry Aliberti of DDC. AD 09/03/2015: Received the following e-mail from LiRo: Ms. Doronova, The Quarterly Monitoring Report for Spill No. 9909675, DSNY Queens East 12 Garage, 130-23 150th Avenue, South Ozone Park, New York, has been uploaded for your review to LiRo s website on September 2, 2015 A link to the website is included: <https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573> The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at [franks@liro.com](mailto:franks@liro.com) or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - [www.liro.com](http://www.liro.com) Will review. AD 10/22/2015: Reviewed the report. It states that the Site monitoring program (SMP) for the period of March 1, 2015, through May 31, 2015, required quarterly water level gauging from accessible Site wells and quarterly sampling from sixteen (16) locations: MW-01 through MW-08, RXMW-01, and injection wells IP-09, IP-13, IP-14 and IP-16 through IP-19. Groundwater samples are submitted for analysis of CP-51 list VOCs. On March 27, 2015, LiRo gauged accessible Site monitoring points and collected groundwater samples from fourteen (14) of sixteen (16) locations listed on the SMP. Groundwater samples were not collected from MW-03 (submerged underneath surface water) and MW-04 (well went dry during purging and did not recharge). All samples were submitted for analysis of the NYSDEC CP-51 list of VOCs and results were compared to the NYSDEC AWQSGVs. GW data: Results of the March 2015 sampling reported one or more VOCs above AWQSGVs in seven (7) of the 14 samples. Monitoring wells or injection points MW-01, MW-02, MW-05, IP-13, IP-16, IP-17 and IP-18 reported one or more VOCs with concentration above their respective NYSDEC AWQSGVs. Groundwater samples collected from monitoring wells MW-06, MW-07, MW-08, RXMW-01, IP-09, IP- 14 and IP-19 reported no CP-51 list VOCs at concentrations above AWQSGVs. March 2015 TVOC concentrations ranged from ND in wells MW-06, MW-07, MW-08, RXMW-01, IP-09, IP-14 and IP-19 to 9,072 ug/L in IP-17. When compared to the previous quarterly sample results (October 2014), eleven (11) of the 14 groundwater samples reported either a decrease or no change in TVOCs: MW-05, MW-06, MW-07, MW-08, RXMW-01, IP-09, IP-13, IP-14, IP-17, IP-18 and IP-19. Conversely, three wells/injection points reported an increase in TVOCs: MW-01, MW-02 and IP-16. While increases were observed, no TVOCs was reported above a past high TVOC concentration at any of the monitoring wells/injection points. Depth to groundwater measurements for March 27, 2015, ranged from 14.28 feet to 17.64 feet and groundwater elevations ranged from 2.68 to 3.95 feet above mean sea level (AMSL).The interpreted groundwater flow direction is generally to the south and is similar to historic gauging events. CONCLUSIONS: LiRo states that no free-phase product was detected in any wells during the monitoring period. Historically, free-phase product has been detected in the Site wells IP-17 and MW-07, however, free-phase product has not been observed in these locations since April 2011. March 2015 groundwater TVOC results indicate no discernable trends in

the groundwater dissolved plume and the plume is not migrating off-site. Based on the conclusions cited above, LiRo recommends the following Actions and Proposals: Actions - Continue routine quarterly groundwater gauging and quarterly sampling of sixteen (16) Site wells: MW-01 through MW-08, RXMW-01, IP-09, IP-13, IP-14 and IP-16 through IP-19. Submit all samples for analysis of NYSDEC CP-51 list VOCs. - Continue routine quarterly reporting of groundwater gauging and sampling conducted at the Site. - Implement approved ISCO Work Plan. LiRo anticipates completing injection well installation and the 1st round of injections in 4Q2015. There are no new proposals that requires NYSDEC approval. AD 12/22/2015: Received the following e-mail from LiRo: Ms. Doronova, The Quarterly Monitoring Report for Spill No. 9909675, DSNY Queens East 12 Garage, 130-23 150th Avenue, South Ozone Park, New York, has been uploaded for your review to LiRo s website on December 22, 2015. A link to the website is included: <https://private.filesanywhere.com/fs/v.aspx?v=8c7165b95c979f799fa1&C=573> The report will remain on the website for a period of one year. A hard copy has been mailed to your office. Please feel free to contact Steve Frank at [franks@liro.com](mailto:franks@liro.com) or myself if you need additional information. Sincerely, Martha DeLozier Geologist/Project Coordinator The LiRo Group Program/Construction Managers - Engineers - Architects 690 Delaware Avenue - Buffalo, New York - 14209 716.882.5476 [T] - 716.882.9640 [F] - [www.liro.com](http://www.liro.com) Will review. AD 01/27/2016: Reviewed the report. It states that the Site monitoring program (SMP) for the period of June 1, 2015, through August 31, 2015, required quarterly water level gauging from accessible site wells and quarterly sampling from sixteen (16) locations: MW-01 through MW-08, RXMW-01, and injection wells IP-09, IP-13, IP-14 and IP-16 through IP-19. Groundwater samples are submitted for analysis of CP-51 list VOCs. Depth to groundwater measurements for June 18, 2015, ranged from 15.07 feet to 18.97 feet and groundwater elevations ranged from -0.65 to 3.91 feet above mean sea level (AMSL). The interpreted groundwater flow direction is generally to the south and is similar to historic gauging events. The typical hydraulic gradients at the Site range between 0.009 feet per foot (ft/ft) and 0.010 ft/ft. The gradient measured for the June 2015 gauging event is within the range of historic gradients observed at the Site. GW data: Results of the June 2015 sampling reported one or more VOCs above AWQSGVs in nine (9) of the 16 samples. Monitoring wells or injection points MW-01, MW-02, MW-04, MW-05, MW-06, IP-13, IP-16, IP-17 and IP-18 reported one or more VOCs with concentration above their respective NYSDEC AWQSGVs. Groundwater samples collected from monitoring wells MW-06, MW-07, MW-08, RXMW-01, IP-09, IP-14 and IP-19 reported no CP-51 list VOCs at concentrations above AWQSGVs. June 2015 TVOCs ranged from ND in wells RXMW-01 and IP-09 to 12,329 ug/L in injection point IP-17. When compared to the previous quarterly sample results (March 2015), eleven (11) of the 16 groundwater samples reported increase in TVOCs, one (1) wells/injection points reported a decrease in TVOCs, two (2) wells reported no change and two (2) wells were not recently sampled. TVOCs (ppb) Well 10/14 3/15 6/15 MW-01 571 601 419 MW-02 41 85 113 MW-03 5 NS 6 MW-04 Dry Dry 175 MW-05 2,764 428 1,019 MW-06 20 ND 22 MW-07 ND ND 1 MW-08 ND ND 2 RXMW-01 ND ND ND IP-09 ND ND ND IP-13 4,963 4,944 11,146 IP-14 5 ND 3 IP-16 5,522 6,995 9,336 IP-17 11,556 9,072 12,329 IP-18 9,570 247 1,744 IP-19 354 ND 9 Groundwater Summary The core of the on-site dissolved-phase plume is generally defined by Site wells: MW-01, MW-02, MW-04, MW-05, MW-06, IP-13, IP-16, IP-17, IP-18 and IP-19. Down-gradient wells (MW-08 and RXMW-01) have

consistently reported non-detectable (i.e. ND) to very low (100 ?g/L) TVOCs reported from these locations: 475 ?g/L at MW-07 (March 2013) and 383 ?g/L at MW-03 (November 2013). Conclusions: No free-phase product was detected in any wells during the monitoring period. Historically, free-phase product has been detected in the Site wells IP-17 and MW-07, however, free-phase product has not been observed in these locations since April 2011. June 2015 groundwater TVOC results indicate the groundwater dissolved phase plume is not migrating off-site. LiRo recommends the following Actions and Proposals: Actions ? Continue routine quarterly groundwater gauging and quarterly sampling of sixteen (16) Site wells: MW-01 through MW-08, RXMW-01, IP-09, IP-13, IP-14 and IP-16 through IP-19. Submit all samples for analysis of NYSDEC CP-51 list VOCs. ? Continue routine quarterly reporting of groundwater gauging and sampling conducted at the Site. ? Implement approved ISCO Work Plan. LiRo anticipates completing injection well installation and the 1st round of injections in 4Q2015. There are no new proposals that requires NYSDEC approval. AD"

DEC Memo: "6/30/2006 - CSL has been sent to: Mr. Bill Stuber - Facilities Manager 260-19 Little Neck Blvd. Little Neck, NY 11362 Nursing Home Fax #718-428-0737 08/18/09-Vought-Received call from and spoke to Steve Sybert (Connor Environmental Ph:443-322-1238 Fax:410-296-3419) who was requesting more information on spill. Steve performed site visit and observed no fills or vent pipes. Sanborns do not show tank locations as well. No PBS registion in region 2 however Sybert referred to Region 1 to check as well as property on boundary between regions. If no information is available from Region 1 PBS and PTC, Department will accept report with databases searched, site observations including absence of soil stains, vents and fills and historical interviews, site and sump observations. Property seeking spill closure due to refinancing. 09/04/09-Vought-Received two emails from Sybert that based on field notes, tank removed was 550-gallons. First email has affidavit dated 7/14/06 from Mercury Tank and Pump (Mark Salamack 718-624-7490 Fax) that documents removal of one 275-gallon UST and associated pipelines. Also attached are five soil endpoint analyticals (four sidewall and one bottom center) from South Mall Labs dated 8/7/06 that show no TAGM 4046 Required Soil Cleanup Objective exceedences other than PAHs attributable to fill material. Vought reviewed time logs from Petroleum Tank Cleaners (718-624-4842) and noted that tank was for emergency generator and two containers of contaminated soil were disposed of. Spill closed by Vought due removal of contaminated soil and collection of clean endpoint samples. Vought sent NFA to below address with cc to Sybert: Mr. Bill Stuber - Facilities Manager 260-19 Little Neck Blvd. Little Neck, NY 11362 Fax:(718)428-0737 "

Remarks: "DURING TANK ABANDONMENT SOIL CONTAMINATION WAS DISCOVERED. OIL WAS

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 1  
Tank Id: 51228  
Material Code: 0013  
Common Name of Substance: Lube Oil

Equipment Records:

G10 - Tank Secondary Containment - Impervious Underlayment  
H00 - Tank Leak Detection - None  
B00 - Tank External Protection - None  
F00 - Pipe External Protection - None  
A00 - Tank Internal Protection - None  
I00 - Overfill - None  
C01 - Pipe Location - Aboveground  
D01 - Pipe Type - Steel/Carbon Steel/Iron  
J02 - Dispenser - Suction Dispenser

Tank Location: 1  
Tank Type: Steel/Carbon Steel/Iron  
Tank Status: Closed - Removed  
Pipe Model: Not reported  
Install Date: 08/01/1990  
Capacity Gallons: 275  
Tightness Test Method: NN  
Date Test: Not reported

DEC Region: 2  
DER Facility ID: 372362  
DEC Memo: "10/04/10 - LZ Even though the spill had been closed, the facility removed its two tanks and performed site assessment. The report (eDocs) submitted by AECOM, dated September 2011, shows that contaminated soil was found, probably as result of a historical release. About 543 tons of contaminated soil were excavated. End-point soil samples show no contamination above CP-51-unrestricted use. Groundwater soil samples from monitoring wells reveal no contamination above TOGS 111. 10/06/10 - LZ Reviewed a site investigation report(eDocs), prepared by ACOM Environmental September 22, 2010. The report indicates that the failure of the tank tightness test was caused by the broken vent line. Five soil samples were taken to determine contamination along the vent line. Detected compounds include 1,2,4-trimethylbenzene (940 ppb), n-butylbenzene 1,500 ppb), naphtalene (3,200 ppb), all below SCOs for unrestricted use. The vent line was replaced on June 21, 2010, and the tank system has passed subsequent tightness test. The spill case is closed. 01/14/2009 Rahman put this spill in Sangesland's name without notifying or putting TTF notation in Place . Therefore no TTF letter was sent. Consultant called Sangesland and said a Phase 2 was completed on the site and now a work plan has been prepared to deal with the contamination. The consultant wanted to know who to send the work plan to - (Forward to Krimgold) \*\*\*\*\*Since HUD is financing this project, HUD requires the DEC to APPROVE the work plan\*\*\*\* 01/21/10. J.Krimgold reviewed the Phase II Environmental Site Assessment and Remedial Action Work Plan prepared by Ecosystem Strategies, Inc and approved it. "

Remarks: "Caller reporting a tank test failure."

ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F003
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
  
- . Waste code: F007
- . Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.
  
- . Waste code: F008
- . Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.
  
- . Waste code: F009
- . Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.
  
- . Waste code: F017
- . Waste name: Not Defined
  
- . Waste code: F018
- . Waste name: Not Defined
  
- . Waste code: P030
- . Waste name: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED
  
- . Waste code: P038
- . Waste name: ARSINE, DIETHYL- (OR) DIETHYLARSINE
  
- . Waste code: P098
- . Waste name: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)
  
- . Waste code: P099
- . Waste name: ARGENTATE (1-), BIS(CYANO-C)-, POTASSIUM (OR) POTASSIUM SILVER CYANIDE
  
- . Waste code: P104
- . Waste name: SILVER CYANIDE (OR) SILVER CYANIDE AG(CN)
  
- . Waste code: P106
- . Waste name: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)
  
- . Waste code: U002
- . Waste name: 2-PROPANONE (I) (OR) ACETONE (I)
  
- . Waste code: U159
- . Waste name: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/07/2016	Source: EPA
Date Data Arrived at EDR: 04/05/2016	Telephone: N/A
Date Made Active in Reports: 04/15/2016	Last EDR Contact: 04/05/2016
Number of Days to Update: 10	Next Scheduled EDR Contact: 04/18/2016
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

## ***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/13/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/06/2016	Telephone: 703-603-8704
Date Made Active in Reports: 05/20/2016	Last EDR Contact: 07/06/2016
Number of Days to Update: 135	Next Scheduled EDR Contact: 10/17/2016
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 03/07/2016	Source: EPA

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/09/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/02/2016	Telephone: (212) 637-3660

## **State and tribal institutional control / engineering control registries**

### RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

Date of Government Version: 11/18/2010	Source: NYC Department of City Planning
Date Data Arrived at EDR: 06/30/2014	Telephone: 212-720-3401
Date Made Active in Reports: 07/21/2014	Last EDR Contact: 06/24/2016
Number of Days to Update: 21	Next Scheduled EDR Contact: 10/03/2016
	Data Release Frequency: Varies

### ENV RES DECL: Environmental Restrictive Declarations

The Environmental Restrictive Declarations (ERD) listed were recorded in connection with a zoning action against the noted Tax Blocks and Tax Lots, or portion thereof, and are available in the property records on file at the Office of the City Register for Bronx, Kings, New York and Queens counties or at the Richmond County Clerk's office. They contain environmental requirements with respect to hazardous materials, air quality and/or noise in accordance with Section 11-15 of this Resolution.

Date of Government Version: 02/04/2016	Source: New York City Department of City Planning
Date Data Arrived at EDR: 03/24/2016	Telephone: 212-720-3300

Data Release Frequency: Varies

### VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 02/17/2016

### ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ADDITIONAL ENVIRONMENTAL RECORDS

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Data Release Frequency: Quarterly

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

Data Release Frequency: Quarterly

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Data Release Frequency: Varies

## HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

## SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

## **EDR HIGH RISK HISTORICAL RECORDS**

### ***EDR Exclusive Records***

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

### **USGS TOPOGRAPHIC MAP**

Target Property Map:	5940539 JAMAICA, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## FEMA FLOOD ZONE

<u>Target Property County</u> QUEENS, NY	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	360497 - FEMA DFIRM Flood data
Additional Panels in search area:	Not Reported

## NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> JAMAICA	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	--

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### *Site-Specific Hydrogeological Data\*:*

Search Radius:	1.25 miles
Status:	Not found

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### ROCK STRATIGRAPHIC UNIT

Era: Cenozoic  
System: Quaternary  
Series: Pleistocene  
Code: Qp (decoded above as Era, System & Series)

#### GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

## OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Surficial Soil Types: silt loam  
loamy sand  
sandy loam  
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock  
very gravelly - loamy sand  
stratified  
sandy loam

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### New York Public Water Wells

Source: New York Department of Health

Telephone: 518-458-6731

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Database

Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

### RADON

#### State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

## SECTION 09 97 13.00

### FUEL SYSTEM COATINGS

#### PART 1 - GENERAL

##### 1.01 SUMMARY:

- A. The work to be performed in this specification includes the cleaning, preparation, painting, coating, and identification of fuel system piping materials, fuel storage tanks, equipment and components.
- B. The preparation and application for the system shall include both field and shop operations.
- C. The coating of field erected tanks shall be completed by both the tank erector prior to tank erection and the coating contractor following all hydrostatic testing of the tank. Tables at the end of this specification outline the responsibilities of each party.
- D. Tables 1 and 2 at the end of this Section define the scope of work and responsibility for all coating work covered by this Section.
- E. The applicable methods and system identification to be used shall be as follows. Reference the data sheets included in this section for individual systems:

Item	Surface	Application	System
All Piping, Fittings, Equipment and Tanks	Interior	Shop/Field	1
Above Ground Piping, Fittings and Equipment	Exterior	Field	2
Below Ground Piping	Exterior	Shop	3
Below Ground Fittings and Coating Repair	Exterior	Field	4
Below Ground Piping for Directional Drilling	Exterior	Field	5

##### 1.02 RELATED SECTIONS:

- A. Section 33 52 43.11 - Fuel System Piping Specialties
- B. Section 33 52 43.13 - Fuel System Pipe, Fittings, and Installation
- C. Section 33 52 43.15 - Fuel System General Valves
- D. Section 33 52 43.18 - Fuel System Inspection, Testing and Flushing
- E. Section 33 56 43.15 - Fuel System Aboveground Vertical Tanks
- F. American Petroleum Institute (API):
  - 1. STD. 1542 - Airport Equipment Marking for Fuel Identification

- G. American Society of Testing and Materials (ASTM):
  - 1. D4414 - Standard Practice for Measurement of Wet Film Thickness by Notch Gages
  - 2. D4417 - Standard Test Methods for Field Measurement of Surface Profile of Blast Cleaned Steel
  - 3. D4541 - Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.
- H. American Society of Mechanical Engineers (ASME):
  - 1. A13.1 – Scheme for the Identification of Piping System
  - 2. Z53.1 - Safety Color Code for Marking Physical hazards
- I. National Association of Corrosion Engineers (NACE)
  - 1. Recommend Practice RP 0188 - Discontinuity (Holiday) Testing of New Protective Coatings on Conductive Substrates.
- J. Military Specifications
  - 1. MIL-C-4556 - Epoxy for Interior of Steel Fuel Tanks
- K. National Fire Protection Association
  - 1. NFPA 407 - Aircraft Fuel Servicing
  - 2. NFPA 704 - Standard System for the Identification of the Fire Hazards of Materials for Emergency Response
- L. Steel Structures Painting Council
  - 1. SP-1 Solvent Cleaning. Removes oil, grease, soil, and other substances. Used with other methods to remove rust, paint and mill scale.
  - 2. SP-3 Power Tool Cleaning. Prepares steel surfaces by the use of non-power hand tools.
  - 3. SP-5 White Metal Blast Cleaning. Removes all scale, rust, and foreign matter. Leaves surface gray-white uniform metallic color.
  - 4. SP-6 Commercial Blast Cleaning. Two-thirds of every 9 square inches free of all visible residues, remainder only light discoloration.
  - 5. SP-7 Brush-Off Blast Cleaning. Removes only loose material, remaining surface tight and abraded to give anchor.
  - 6. SP-10 Near White Blast Cleaning. At least 95% of every 9 square inches shall be free of all visible residues.
  - 7. SP-11 Power Tool Cleaning to Bare Metal.

**1.03 SUBMITTALS:**

- A. Submit as specified in Section 33 52 43.00. Submittals shall include, but not be limited to:
  - 1. Surface preparation requirements.
  - 2. Product manufacturer, name of coating, and number designation of coating.

3. Method of application and the minimum and maximum dry film thickness of coating (per coat) to be applied.
4. Certification from the manufacturer that the unthinned maximum VOC content of the field applied coating products is below the maximum allowable for the project location.
5. Color charts for selection of paint color by the Owner.
6. Technical and material safety data sheets.
7. Pipe/Equipment labels:
  - a. Submit a drawing that clearly indicates the proposed location of piping labels.
  - b. Catalog cuts and samples of the piping and equipment labels
8. Third party NACE Certified testing agency and their graphical report indicating test locations and results.

#### **1.04 QUALITY ASSURANCE:**

- A. Manufacturer's guarantee. A coating (lining) must be installed under the direction of the coating (lining) manufacturer or a certified representative. The manufacturer or representative must guarantee to the owner in writing that the coating (lining) will not leak the product specified in storage and the coating (lining) will not deteriorate in any way for a period of 10 years. A copy of the guarantee must be kept by the owner for the life of the AST. Per 6 NYCRR section 613-4.2(d)(5).
- B. The coating applicator for field operations or for shop operations shall have a minimum of 5 years of experience in the Systems specified. The coating applicator shall certify in writing that he has previous experience applying all of the coating systems in this specification for which he is responsible.
- C. Compliance submittals and certification of experience shall be submitted to the Engineer prior to starting the work.
- D. The coating applicator shall provide a certificate of quality control procedures utilized during application of internal and external coatings. The certification shall include surface preparation, film thickness per coat, curing procedures, and holiday testing.
- E. The Contractor shall stencil the coating product specifications for all materials used in the painting process in black block lettering on a manway cover of each tank. This includes both internal and external coating systems.
- F. The coating manufacturer shall certify that the internal pipe coating used in all fuel contact locations is compatible for a submersible use in Jet-A fuel.
- G. All coatings shall be applied in strict accordance with the manufacturer's recommendations including environmental conditions, surface preparation, coating method and coverage, etc.
- H. Piping and equipment labels shall comply with listed codes and standards for color coding, lettering size, and length of color field.
- I. Contractor shall submit painting sequence for the preparation and application of all coating systems. Contractor shall ensure painting sequence does not contaminate or overspray existing

and/or newly painted equipment. Contractor shall ensure that all newly painted surfaces remain clean and are not contaminated by subsequent blasting and painting operations. Contractor shall clean and/or recoat surfaces deemed not acceptable due to product contamination at no cost to the Owner.

J. Coating Inspection

1. Contractor shall employ the services of a third party NACE Certified testing agency.
2. Inspector shall inspect the surface preparation, perform all wet film and dry film thickness testing on all field applied coatings. Contractor shall submit to the Engineer the proposed testing agency for approval.
3. Inspector shall record ambient temperature, humidity, and surface temperature.
4. Inspect dry film for holidays, runs and sags.
5. Inspector shall complete a daily inspection report similar to the sample report at the end of this section.

**PART 2 - MATERIALS**

**2.01 SYSTEM TABLES:**

- A. System tables for interior and exterior coatings are included within this specification to indicate the degree of preparation, methods of application, finish thickness, manufacturer names and product numbers. This specification addresses coatings for components and materials for the fuel systems.

**2.02 IDENTIFICATION OF PIPING:**

- A. The identification of fuel system piping shall be through a combination of pressure sensitive labels, bands and flow arrows.
- B. The materials shall be as manufactured by Gammon Technical Products, W.H. Brady, Seton Corp. or approved equal and shall conform to ASME A.13.1.
- C. Legend designations for all fuels shall be in accordance with API Std. 1542.

- D. Direction of flow arrows shall be coordinated with pipe size and shall be of the same color code as stated in API 1542 for the corresponding fuel.

- E. Foam piping shall be identified near the fire department connection. Label each pipe horizontally on both sides with the corresponding Tank No. that the piping supplies.

**2.03 IDENTIFICATION OF EQUIPMENT:**

- A. Pressure sensitive labels or stenciling with paint shall be used for the identification of equipment. If paint is used, it shall conform to these specifications.
- B. Equipment to be identified shall be as follows:
  - 1. Sump separators – 3 inches high in two locations. Identification shall include the number that corresponds to the P&ID and the control system screens.
  - 2. Vertical fuel storage tanks – 12 inches high in four locations (one label per quadrant). Identification shall include the number that corresponds to the P&ID and the control system screens, product type and useable volume in gallons. Labels shall have a black background with white letters and shall read: Example below.

3,000,000  
GALLONS.

- C. Tanks shall have a decal stating “Tank Last Cleaned On” with a space for filling in dates. Decal shall be placed on the tank shell adjacent to the bottom of the stairs. Lettering shall be 1" (25mm) high.
- D. Tank Sump Separators shall have a decal stating “Volume of Tank Drain Piping \_\_\_ Gallons”
- E. Tanks shall have a 4” high black lettering decal stating” FLAMMABLE” AND “NO SMOKING”
- F. Tanks shall have a hazardous materials identification marker located on four sides in accordance with NFPA 704. Place label directly beneath Jet-A, Tank No. label. For Jet-A, the Health Signal shall be blue and shall be “0”, the Flammability Signal shall be red and shall be “2”, and the Reactivity Signal shall be yellow and shall be “0”. Numbers shall be 3” high to be legible from 100 feet. Numbers shall be 4” high to be legible from 200 feet. Numbers shall be 6” high to be legible from 300 feet.

- G. Provide custom valve and equipment tags. Signs shall be made of two color laminated fiberglass 1/8-inch thick with contrasting color for the engraved color. Signs shall be laminated sealed with a clear epoxy coating, which is scratch, chemical and ultraviolet resistant. Lettering shall have minimum height of 1/2-inch. Provide an aluminum bracket to securely hold sign. Bracket shall be mounted to valve or equipment on a bolt, flange, cap or other feature that will allow a secure attachment. Locate tag so it is easily visible.

#### **2.04 IDENTIFICATION OF OPERATIONS:**

- A. This section of the specification addresses the identification of operational areas and operational conditions within the facility.
- B. Two color laminated fiberglass signs 1/4-inch thickness with contrasting color for the engraved color shall be used.
- C. The signs shall come complete with self-tapping metal screws for attachment.
- D. Lettering shall be 2-inch high Eurostile Bold Extended in white for U.S. Standard Red backgrounds.
- E. Signage shall identify the following:
1. EMERGENCY FUEL SHUT-OFF (PUSH): Locate at each EFSO station.
  2. FOAM FIRE PROTECTION CONNECTION: Locate on each connection at the foam manifold.
  3. JET-A FUEL
  4. NO SMOKING
  5. TANK NO. 1, etc.: Locate at each butterfly valve at the foam system manifold identifying the valve to serve each tank.

#### **PART 3 - EXECUTION**

### **3.01 INTERNAL COATING OF PIPING, FITTINGS, TANKS AND EQUIPMENT:**

- A. Reference System 1 of the attached tables.
- B. This section shall apply to both shop and field applied epoxy internal coatings for piping, fittings, above ground tanks, components, exterior of piping and pipe supports that are installed internal to the tank, and equipment.
- C. All fuel contact surfaces shall receive the epoxy coating.
- D. Clean surfaces of new metal to be coated by removing rust, loose mill scale, welding slag, dirt, oil, grease, and other foreign substances. The surfaces to be painted shall be sandblasted or shot blasted immediately before applying the prime coat. Remove all surface irregularities such as burrs, weld splatter, etc., before proceeding with blasting. Blasting shall be in strict accordance with Steel Structures Painting Council Surface Preparation Specification. Care shall be taken to prevent grease, oil or other organic matter from contacting the blasted surface prior to application of the prime coat. Blasting shall be coordinated with primer application, which shall be applied as soon as possible after blasting. If the blasted surface remains uncoated overnight, it shall be reblasted. Remove all traces of blast products from surfaces, pockets and corners to be painted by brushing with clean brushes, by blowing with clean dry air, or by vacuum cleaning.
- E. Coatings shall be a two (2) coat system of epoxy paint and be applied in accordance with the manufacturer's instruction and procedure and shall be approved by the manufacturer's representative. Paint shall be applied to the full length of pipe and fittings, to tank rafters, columns, pipe supports, and equipment internal to the tank. The total dry film thickness of the paint shall be within the range recommended by the manufacturer. The ends of the pipe and fittings shall have the paint wiped back 1-1/2" with cloth or other approved absorbent material. Masking the ends will not be acceptable. The temperature of the blasted steel shall be a minimum of 5°F (3°C) above the dew point. Surface temperatures shall not be below 6°F (4°C) and the relative humidity 40 to 85 percent during coating application. Provide heaters and dehumidification as required by conditions to maintain coating schedule.
- F. Dry film thickness shall be spot checked at random, or as indicated by the Engineer's representative, on the coated surfaces after each coat has been applied and has cured. At a minimum, the thickness shall be checked every 20 linear feet of piping. The tank interior shall be tested once every 100 square feet. If film thickness is not found to be uniform and to specification by the Engineer, the Contractor shall be required to apply additional coats at no cost to the Owner until the specified film thickness has been obtained. If the dry film thickness exceeds the maximum allowable film thickness per the manufacturer, the Contractor shall remove and reapply the coating in those areas at no cost to the Owner. Dry film thickness is to be checked by the Contractor at his expense by a third party NACE certified coating inspector.
- G. After the paint has dried to its maximum hardness, the ends of all pipes are to be closed with plastic cap seals manufactured for this purpose. The aboveground tanks shall have the manways installed and all nozzles and flanges covered with plastic covers with the exception of the vent.
- H. If, in the opinion of the Engineer or NACE inspector the coatings show ridges, waves, runs, orange peeling, or holidays indicating uneven coverage or improper application, the Contractor shall be required to remove and re-apply the coating at no cost to the Owner.

- I. Internal coating of aboveground vertical tanks shall use a full scaffolding system with a complete floor beneath the rafters to allow complete access. Provide scaffolding to allow access to internal shell plate surfaces.

**3.02 EXTERNAL COATING OF ABOVEGROUND PIPING, FITTINGS, EQUIPMENT AND TANKS:**

- A. Reference System 2 of the attached tables.
- B. All pipe, fittings and equipment which are installed above ground shall be given a protective covering applied with equipment especially designed for this purpose. Before the coating is applied, the surface of the pipe, fittings and equipment shall be thoroughly cleaned of all rust, scale, oil, grease and other matter that will interfere with the proper adhesion of the primer coat. Those pieces of equipment, valves, pumps, motors, actuators, etc. that have been shop primed or delivered to the site with a finish coat shall be properly prepared for application of the coating. Contractor shall coordinate with the equipment suppliers and the coating manufacturer on the proper preparation and application of the coating. Provide certification from coating supplier that the systems are compatible.
- C. The surfaces to be painted shall be sandblasted or shot blasted immediately before applying the prime coat. Remove all surface irregularities such as burrs, weld splatter, etc., before proceeding with blasting. Blasting shall be in strict accordance with Steel Structures Painting Council Surface Preparation Specification. Care shall be taken to prevent grease, oil or other organic matter from contacting the blasted surface prior to application of the prime coat. Blasting shall be coordinated with primer application, which shall be applied as soon as possible after blasting. If the blasted surface remains uncoated overnight, it shall be reblasted. Remove all traces of blast products from surfaces, pockets and corners to be painted by brushing with clean brushes, by blowing with clean dry air, or by vacuum cleaning.
- D. All fieldwork shall be done in a manner and with materials that will produce a covering equal in effectiveness to that of the factory applied coating.
- E. Prepare the surface as specified, defined and remove any loose rust, scale, dust or dirt. Oil and grease are to be removed with suitable solvent. All field-applied coatings shall conform to the contour of the pipe or fitting leaving no moisture traps between or under the coating.
- F. ALL equipment labels, data plates, control tubing, pressure gauges, etc., shall be masked prior to painting adjacent piping. If these items are painted, the Contractor shall clean them to the satisfaction of the Owner or replace them at no cost to the Owner.
- G. Coatings shall be a two (2) coat system with an epoxy first coat and a polyurethane top coat applied in accordance with the manufacturer's instruction and procedure and shall be approved by the manufacturer's representative. The total dry film thickness of the paint shall be within the range recommended by the manufacturer. The temperature of the blasted steel shall be a minimum of 5°F (3°C) above the dew point. Surface temperatures shall not be below 6°F (4°C) and the relative humidity 40 to 85 percent during coating application. Provide heaters and dehumidification as required by conditions to maintain coating schedule. For those surfaces that are shop primed only and then erected with the tank, the recoat window time will have elapsed. Contractor shall brush blast the previously primed surfaces and apply an additional prime coat prior to the top coat.

- H. Coatings shall be a three (3) coat system with a reinforced inorganic zinc primer, a high build epoxy second coat, and an acrylic epoxy gloss coating top coat applied in accordance with the manufacturer's instruction and procedure and shall be approved by the manufacturer's representative. The total dry film thickness of the paint shall be within the range recommended by the manufacturer. The temperature of the blasted steel shall be a minimum of 5°F (3°C) above the dew point. Surface temperatures shall not be below 6°F (4°C) and the relative humidity 40 to 85 percent during coating application. Provide heaters and dehumidification as required by conditions to maintain coating schedule. For those surfaces that are shop primed only and then erected with the tank, the recoat window time will have elapsed. Contractor shall prep the surface per System 2 prior to the second and third coats being applied.
- I. Dry film thickness shall be spot checked at random, or as indicated by the Engineer's representative, on the coated surfaces after each coat has been applied and has cured. At a minimum, the thickness shall be checked every 20 linear feet of piping and at each fitting, flange, etc. The tank exterior shall be tested once every 100 square feet. If film thickness is not found to be uniform and to specification by the Engineer, the Contractor shall be required to apply additional coats at no cost to the Owner until the specified film thickness has been obtained. If the dry film thickness exceeds the maximum allowable film thickness per the manufacturer, the Contractor shall remove and reapply the coating in those areas at no cost to the Owner. Dry film thickness is to be checked by the Contractor at his expense by a third party NACE certified coating inspector.

**3.03 EXTERNAL COATING OF BELOW GROUND PIPING:**

- A. Reference System 3 of the attached tables.
- B. External coating of below ground pipe shall be factory or mill applied in the pipe manufacturer's shop or in the mill of the custom external coater.
- C. The pipe coating shall be a Fusion Bonded Epoxy (FBE) coating. For piping to be installed by bore and jack operations or directional drilling, a top coat shall be applied as specified in the Table 3 and Table 4.
- D. Holiday test all coatings and repair. All holidays shall be patched prior to shipment of pipe to the jobsite.
- E. Application, testing and inspection shall be in accordance with manufacturer's recommendations.

**3.04 EXTERNAL COATING OF BELOW GROUND PIPING JOINTS, REPAIRS, AND FITTINGS:**

- A. Reference System 4 of the attached tables.
- B. Joint coatings for piping to be pressure tested shall be applied after testing and acceptance.
- C. Blast bare metal to SSPC-SP-10. Holiday repairs shall have surface sanded with 80 grit carborundum cloth. Remove all dust from sanding or blasting.
- D. Application shall be in accordance with manufacturer's published instructions.
- E. Coating of pipe to be buried, shall include welded joint connections.

**3.05 PIPING AND EQUIPMENT IDENTIFICATION:**

- A. Clean area of surface to receive label or other pressure-sensitive item free of oil, grease, dust, dirt, or other substances that would affect adhesion.
- B. On painted surfaces, install label only after coating system is complete and dry film thickness testing completed and accepted.
- C. Use proper label type suitable for interior or exterior location as applicable.
- D. Locate labels on piping near connections to equipment, adjacent to valves or fittings, and at intervals not to exceed 25 feet (8 m). Final location shall be determined by Owner and Engineer.
- E. For piping with arrows to indicate direction of flow, place arrows adjacent to or below labels, depending upon visibility. For dual-flow piping, indicate both directions.
- F. Locate legends and labels so as to be visible from normal line of vision above finished floor or grade level.

### **3.06 PROTECTION:**

- A. Cover and protect all surfaces that are not to be painted which are in close proximity to the painting operation. Remove all protective materials when appropriate and before materials such as masking tape becomes difficult to remove.
- B. Provide signs to indicate fresh paint areas.
- C. Mask, remove, or otherwise protect finish hardware, control tubing, pressure gauges, control devices, and equipment nameplates as necessary. Provide cover to prevent paints from entering orifices in electrical or mechanical equipment.
- D. Provide daily cleanup of both storage and working areas and removal of all paint refuse, trash, rags, thinners, etc. Dispose of leftover containers, thinners, rags, brushes, rollers, etc. in accordance with applicable regulations.

### **3.07 CLEANING:**

- A. Touch up and restore damaged finishes to original condition as required. Remove all masking tape residue and glues that may be left on surfaces.
- B. Remove spilled, dripped or splattered paint from all surfaces.

### **3.08 COATING REPAIRS:**

- A. Repair all damages to pipe coating systems before the piping is holiday tested. This includes all cuts, breaks, voids, bruised or scarred spots, or other damage caused prior to delivery, or resulting from handling or installation of the pipe, or from any cause whatsoever.
- B. Included also are damaged coatings where new connections are made to existing coated pipes or where existing coated pipes are uncovered or exposed for any reason.
- C. Also repair the coating where welds are made and where damaged or broken by the installation of instrumentation or other accessories or appurtenances.
- D. Repair all holidays detected during inspection of coatings. Use the same coatings for repair as was used for the base coating with the exception of belowground piping which shall use System 4.

### 3.09 INSPECTION:

- A. Contractor shall employ the services of a third party NACE certified coating inspector. Inspector shall provide daily reports.
- B. Surface profile shall be testing using ASTM D4417 Replica tape. Ensure correct mil range tape is used. Include with daily reports.
- C. Prior to coating but post blasting, ensure all dust is removed. Use clear cellophane tape to determine the amount of dust from abrasive blasting and other sources has not been removed. Press the tape on the surface, peel off, and visually observe the amount of dust that sticks to the tape. Clean the test area with acetone or alcohol to remove tape adhesive from prepared surface. The test tape showing the dust particles shall be documented by applying it to the daily inspection report.
- D. Use wet film gauges to check each application about every 15 minutes in order to correct low or heavy film build immediately.
- E. Use dry film gauge to check each coat when dry, and the total system when completed.
- F. The Contractor shall inspect all exterior pipe and joint coatings with a Holiday Tester to locate any damage to the protective coatings during the course of construction. All Holiday tests shall be witnessed by a third party inspector.
- G. This element of testing shall take place after all welding and radiograph **examination** has been completed, and after the section of piping has been lowered into the trench.
- H. The inspection shall be performed by using an approved tester at a voltage recommended by the coating manufacturer.

Comments:

**FUEL SYSTEM COATINGS SYSTEM - 1**

**SERVICE:** All Piping, Fittings, Equipment, and Tanks - Interior

**Surface Preparation:** SSPC-SP 10 to a profile depth recommended by product manufacturer.

**First Coat:** Multi-purpose, jet-fuel resistant, epoxy coating. Apply at a rate to meet the manufacturer's recommended dry film thickness. Do not exceed the maximum dry film thickness as published by the manufacturer. Wipe coating 1-1/2" from end of pipe.

**Touch Up:** Old coatings should be tested for lifting. If lifting occurs, remove the lifted coating. Otherwise, scuff sand glossy areas and aged epoxy coatings. Clean aged epoxy as recommended by coating manufacturer. Remove cracked or peeling paint. Prime bare areas and apply entire system coatings.

**Second Coat:** Same as first coat except color shall be different than first coat to distinguish between coats. Second coat shall be white, light gray, or beige for light reflectance and to facilitate inspection. Wipe coating 1-1/2" from end of pipe

**Third Coat:** Not required.

**System Total:** System total shall meet the recommended dry film thickness.

**Volatile Organic Content:** Maximum 1.0 lbs/gal

Manufacturer	First Coat	Touch Up	Second Coat	Third Coat
Ameron	Amercoat 395FD	N/A	Amercoat 395FD	
Tnemec	Tneme-liner 61	N/A	Tneme-liner 61	
Devoe	Bar-Rust 236 (white)	DEVPREP 88, Bar-Rust 236	Bar-Rust 236 (buff)	

**Notes:**

1. Upon completion, check for voids with a suitable electric holiday detection operating at the proper voltage as recommended by the manufacturer. Repair all holidays.

FUEL SYSTEM COATINGS SYSTEM - 2

SERVICE: Above Ground Piping, Fittings, Equipment, and Tanks - Exterior

**Surface Preparation:** SSPC-SP 6 to a profile depth recommended by product manufacturer.

**First Coat:** High build, high solids epoxy low sheen enamels with minimum 68% solids by volume. Apply at 5.0 mils dry film thickness.

**Second Coat:** High build, high solids polyurethane low sheen enamels with minimum 70% solids by volume. Apply at 5.0 mils dry film thickness.

**Third Coat:** Not required.

**System Total:** System total shall meet the recommended dry film thickness.

**Touch Up:** Per manufacturer's recommendations.

**Volatile Organic Content:** Maximum lbs/gal: 2.7 epoxy, 2.3 urethane.

Manufacturer	First Coat	Touch Up	Second Coat	Third Coat
Ameron	Amercoat 385	Same as first coat	Amercoat 450HSG	
Devoe	Devran 224HS	Same as first coat	Devran 229H	
Tnemec	66-Hi Build Epoxoline	Same as first coat	1075 Endura-Shield	

Notes:

1. A low sheen material is required. Gloss or high gloss will not be acceptable.

**FUEL SYSTEM COATINGS SYSTEM - 2**

**SERVICE:** Above Ground Piping, Fittings, Equipment, and Tanks - Exterior

**Surface Preparation:** SSPC-SP 10 to an anchor profile depth of 1.5 mils to 2.0 mils.

**First Coat:** Reinforced Inorganic zinc silicate primer. Apply at a dry film thickness as recommended by manufacturer.

**Prep Aged Primer:** Power wash all surfaces at a minimum of 1500-2500 psi using a Devprep 88 solution. The use of a stiff bristle brush will aid in the cleaning process if required. Allow the Devprep 88 solution to remain on the coated steel surface no longer than 15 minutes before pressure washing it off with clean water at a minimum of 1500-2500 psi. Note that the Devprep 88 solution cleans, neutralizes acids and promotes adhesion while acting as a sequestration agent able to remove sulphates and chlorides effectively.

**Second Coat:** High build, high solids catalyzed polyamide epoxy with minimum 70% solids by volume.

**Third Coat:** Acrylic epoxy gloss coating.

**System Total:** First Coat, Cathacoat 302H to dry film thickness of 3-4 mils. Second coat, DEVRAN 224HS to a dry film thickness of 6 to 8 mils. Third coat, DEVRAN 229H to a dry film thickness of 2 mils.

**Touch-up:** Per manufacturer's recommendations.

Manufacturer	First Coat	Prep Aged Primer	Second Coat	Third Coat
Devoe	Cathacoat 302H (green)	Devprep 88	Devran 224HS(buff)	Devran 229H (white)

**Notes:**

Top coat shall be white with the exception of the foam chamber and foam piping which shall be bright red. Valves shall be painted per API 1542. Jet -A service shall be red and Avgas shall be blue.

**FUEL SYSTEM COATINGS SYSTEM - 3**

**SERVICE:** Below Ground Piping- Exterior

**Surface Preparation:** SSPC-SP 6 to a profile depth recommended by product manufacturer.

**First Coat:** Shop applied, fusion bonded epoxy powder. Apply at 14 mils minimum dry film thickness. Wipe back the coating 2” from the end of the piping.

**Second Coat:** Only required for piping used in directional drill or bore and jack installations.

**Third Coat:** Not required.

**System Total:** Minimum 14.0 mils dry film thickness.

**Touch Up:** Field applied, two component, catalyzed epoxy as recommended by the manufacturer.

Manuf acturer	First Coat	Touch Up	Second Coat	Third Coat
3M	Skotch-Kote 6233	Skotch-Kote 226P Hot Melt Patch Compound		
Valspar (Lily) Coatings	PipeClad 2000	PipeClad Patch Compound		

Notes: Shop coated pipe shall have specification, grade, and heat number stenciled on the coating.

**FUEL SYSTEM COATINGS SYSTEM - 4**

**SERVICE:** Below Ground Fittings and Coating Repair - Exterior

**Surface Preparation:** Cleanliness: Near White; Standards: SSPC SP-10. Sweep blasting is required if the maximum recoat window is exceeded. Small areas may be sanded with 80 grit carborundum cloth. All dust from sanding or blast roughening must be removed from the surface prior to the application of coating. Profile: 2.5 mils minimum to 5.0 mils maximum.

**First Coat:** Apply Brush Grade with brush or roller. Apply without runs, drips or sags.

**Second Coat:** Not required.

**Third Coat:** Not required.

**System Total:** 20 mils minimum to 50 mils maximum (single coat).

**Inspection:** Check for voids with an electronic holiday detector.

Manufacturer	First Coat	Touch Up	Second Coat	Third Coat
Special Polymer Coatings	SP-6888

Attn: Robert Pruno, P.E., Chief Environmental Engineer

**Re: Bulk Fuel Farm  
JFK International Airport, Jamaica, NY  
NYSDEC Spill Case 9106609**

Dear Mr. Pruno:

I have reviewed the 4<sup>th</sup> Quarter 2015 & 1<sup>st</sup> Quarter 2016 Remedial Progress Report pertaining to the above-referenced spill site, submitted by The Port Authority of New York & New Jersey (PANY&NJ) and dated May 2016. The report presents data regarding measured free product thicknesses at the site and product recovery data, as well as the results of groundwater sampling performed in Area of Concern 2 (AOC-2) at NYSDEC's request to help evaluate a proposal by PANY&NJ to revise the southern boundary of AOC-2.

The groundwater sample results showed no significant dissolved-phase impacts in monitoring wells located within the southern portion of AOC-2 proposed for abandonment. Based on the data, PANY&NJ reiterates their request to adjust the southern boundary of AOC-2.

The proposal to revise the boundary of AOC-2 is approved. All monitoring wells remaining in the former section of AOC-2 excluded by the revised boundary should be properly decommissioned in accordance with NYSDEC policy.

Please feel free to contact me at (718) 482-6388 if you have any questions or comments.

Sincerely,

Jonathan Kolleeny  
Engineering Geologist 2

Leszek – Thank you for taking the time to discuss the submittal requirements for the design review of this project to construct Tanks # 1 and 2 at the JFK Bulk Fuel Farm as required under JFK's MOSF general conditions. As discussed, my colleague, Will Cattouse, will send you a link to download electronic copies of Argus' drawings and specifications for the project. I appreciate your help in getting our documents to Mr. S. Ali who will review them as well. Please advise if any additional information is needed. As I mentioned on the phone, Argus is available to discuss the project scope and design. - Paul

Tanks # 1 and 2 - NYSDEC Design Review  
Project No. 15017 ("Project")  
John F. Kennedy International Airport ("JFK")  
Jamaica, New York 11430**

Dear Mr. Johnke:

The New York State Department of Environmental Conservation (the "Department") has received your January 20, 2017 submittal, which includes tank design plans, specifications, and construction scope documents for the above-referenced Project for two aboveground storage tank of total capacity 6,812,160 gallons (3,412,080 gallons each). The submittal was prepared by Argus Consulting Engineers, P.C., as part of an effort to add two new jet fuel storage tanks to the existing MOSF # 2-2380.

The Department has completed its review and has determined that the Project is consistent with the Department's regulations (6 NYCRR Part 613). Accordingly, the Department approves the submitted documents.

This approval in no way affects, or relieves the owner of responsibility to comply with other state, federal or local law, or regulations.

If you have any questions, please call me at (718) 482-4003.

Sincerely,

Md. Shahin Ali

## K. Public Notifications

**THE PORT AUTHORITY**  
OF NEW YORK & NEW JERSEY

John F. Kennedy International Airport  
Aircraft Fuel Tank Installation  
FINAL Environmental Assessment

This Page Intentionally Left Blank

**THE PORT AUTHORITY OF NEW YORK & NEW JERSEY**  
**NOTICE OF AVAILABILITY and REQUEST FOR COMMENT**  
**Draft Environmental Assessment**  
**Aircraft Fuel Tank Installation**  
**John F. Kennedy International Airport, Queens, New York**

In accordance with the National Environmental Policy Act of 1969 (NEPA) notice is hereby given that copies of a Draft Environmental Assessment (EA) for the proposed Aircraft Fuel Tank Installation Project at John F. Kennedy International Airport are available for public review and comment at the following locations:

The Port Authority of NY & NJ  
John F. Kennedy International Airport  
Building 14/PA Administration Building  
3rd Floor  
Queens, NY 11430  
Attn: Jim Steven  
Hours: 8:00 am to 4:00 pm

The Port Authority of NY & NJ  
Aviation Department  
4 World Trade Center/150 Greenwich Street  
18th Floor  
New York, NY 10007  
Attn: Kathryn Lamond  
Hours: 9:00 am to 5:00 pm

The Draft EA document for this project will be available at these locations until the close of the comment period, which is 30 days after the publication date of December 8th. In addition, a copy of this document may be viewed online at: <http://www.panynj.gov/about/studies-reports.html>

The Draft EA document responds to all of the requirements of the Federal Aviation Administration (FAA) for preparation of an Environmental Assessment (EA) pursuant to NEPA and also documents compliance with Federal Executive Orders 11988 and 13690: Floodplain Management. The Port Authority of New York & New Jersey (Port Authority) is inviting the public to submit, in writing, comments on the Draft EA prepared for the Aircraft Fuel Tank Installation Project. The Port Authority is accepting comments on this Draft EA document until the official comment period closes on January 8th. Comments must be received by 5:00 PM on January 8<sup>th</sup> in order to be considered.

All comments on this Draft EA should be sent to: The Port Authority of NY & NJ, 4 World Trade Center/150 Greenwich Street, 18<sup>th</sup> Floor, New York, NY 10007, Attn: Kathryn Lamond. In addition, comments may be emailed to [JFKEA@PANYNJ.GOV](mailto:JFKEA@PANYNJ.GOV) with the subject heading "FUEL TANK EA COMMENT." If you have any questions on this notice, please send an email to address above.

## Legal Notice/Notice of Divorce

SUPREME COURT OF THE STATE OF NEW YORK—COUNTY OF NEW YORK- Index No. 305399- Date Purchased: May 16, 2016- SUMMONS AND COMPLAINT- Plaintiff designates New York County as the place of trial- Basis of venue: CPLR Sec.509- MEHMET ALI SIGVA, Plaintiff - against- TANSU TOPRAK, Defendant -ACTION FOR DIVORCE—To the above-named Defendant YOU ARE HEREBY SUMMONED to serve a notice of appearance on plaintiff's attorneys within thirty (30) days after the service of this summons is complete and in the case of your failure to appear, judgement will be taken against you by default for the relief demanded in the notice set forth below. Dated May 16, 2016 New York, New York Law Offices of Ogmen Law PLLC 26 Broadway, 17th Floor, New York, NY 10006 (212)-245-7070 NOTICE: The nature of this action is to dissolve the marriage between the parties on the grounds of (i) the abandonment of the Plaintiff by the Defendant for a period of more than one year pursuant to DRL Section 170 (2). The relief sought is a judgement of absolute divorce in favor of the plaintiff dissolving the marriage between the parties in this action. NOTICE OF AUTOMATIC ORDERS: Pursuant to domestic relations law section 236 part b, sec. 2, the parties are bound by certain automatic orders which shall remain in full force and effect during the pendency of the action. For further details you should contact the clerk of the matrimonial part, Supreme Court, 60 Centre Street, New York, NY 10007 Tel (646) 386-3010. DRL 255 Notice: Please be advised that once the judgement of divorce is signed in this action, both parties must be aware that he or she will no longer be covered by the other party's health insurance plan and that each party shall be responsible for his or her own health insurance coverage, and may be entitled to purchase health insurance on his or her own through a COBRA option, if available. NOTICE OF GUIDELINE MAINTENANCE: Pursuant to DRL Sec. 236(B) 5-a, there is an obligation to award the guideline maintenance (spousal support) an income up to \$175,000.00 to be paid by the higher income spouse to the lower income spouse after the divorce is final according to a formula unless the parties agree otherwise or waive this right.

## Legal Notice

## THE PORT AUTHORITY OF NY &amp; NJ

NOTICE OF AVAILABILITY and REQUEST FOR COMMENT  
Draft Environmental Assessment  
Aircraft Fuel Tank Installation  
John F. Kennedy International Airport, Queens, New York

In accordance with the National Environmental Policy Act of 1969 (NEPA) notice is hereby given that copies of a Draft Environmental Assessment (EA) for the proposed Aircraft Fuel Tank Installation Project at John F. Kennedy International Airport are available for public review and comment at the following locations:

The Port Authority of NY & NJ John F. Kennedy International Airport Building 14/ PA Administration Building 3rd Floor Jamaica, NY 11430 Attn: Jim Steven Hours: 8:00 am to 4:00 pm	The Port Authority of NY & NJ Aviation Department 4 World Trade Center/150 Greenwich Street 18th Floor New York, NY 10007 Attn: Kathryn Lamond Hours: 9:00 am to 5:00 pm
--	--

The Draft EA document for this project will be available at these locations until the close of the comment period, which is 30 days after the publication date of December 8th. In addition, a copy of this document may be viewed online at: <http://www.panynj.gov/about/studies-reports.html>

The Draft EA document responds to all of the requirements of the Federal Aviation Administration (FAA) for preparation of an Environmental Assessment (EA) pursuant to NEPA and also documents compliance with Federal Executive Orders 11988 and 13690: Floodplain Management. The Port Authority of New York & New Jersey (Port Authority) is inviting the public to submit, in writing, comments on the Draft EA prepared for the Aircraft Fuel Tank Installation Project. The Port Authority is accepting comments on this Draft EA document until the official comment period closes on January 8th. Comments must be received by 5:00 PM on January 8th in order to be considered.

All comments on this Draft EA should be sent to: The Port Authority of NY & NJ, 4 World Trade Center/150 Greenwich Street, 18th Floor, New York, NY 10007, Attn: Kathryn Lamond. In addition, comments may be emailed to JFKEA@PANYNJ.GOV with the subject heading "FUEL TANK EA COMMENT." If you have any questions on this notice, please send an email to address above.

### Legal Notice # 21328341

**SUMMONS, NOTICE AND BRIEF STATEMENT OF NATURE OF ACTION CONSUMER CREDIT TRANSACTION SUPREME COURT OF THE STATE OF NEW YORK COUNTY OF NASSAU**  
Index No. 16-007785 M&T BANK, Plaintiff, -against- HERZEL MEIRI, et al., Defendants. TO THE DEFENDANT(S): HERZEL MEIRI YOU ARE HEREBY SUMMONED and required to serve upon plaintiff's attorneys an answer to the complaint in this action within twenty (20) days after the service of this summons, exclusive of the day of service, or within thirty (30) days after service is complete if the summons is not personally delivered to you within the State of New York. The United States of America, if designated as a defendant in this action, may answer or appear within sixty (60) days of service hereof. In case of your failure to answer, judgment will be taken against you for the relief demanded in the complaint. Trial is desired in the County of NASSAU. The basis of venue designated above is that the real property, which is the subject matter of this action, is located in the County of NASSAU, New York. NOTICE: YOU ARE IN DANGER OF LOSING YOUR HOME IF YOU DO NOT RESPOND TO THIS SUMMONS AND COMPLAINT BY SERVING A COPY OF THE ANSWER TO THE ATTORNEY FOR THE MORTGAGE COMPANY WHO FILED THIS FORECLOSURE PROCEEDING AGAINST YOU AND FILING THE ANSWER WITH THE COURT A DEFAULT JUDGMENT MAY BE ENTERED AND YOU CAN LOSE YOUR HOME. SPEAK TO AN ATTORNEY OR GO TO THE COURT WHERE YOUR CASE IS PENDING FOR FURTHER INFORMATION ON HOW TO ANSWER THE SUMMONS AND PROTECT YOUR PROPERTY. SENDING A PAYMENT TO YOUR MORTGAGE COMPANY WILL NOT STOP THIS FORECLOSURE ACTION. YOU MUST RESPOND BY SERVING A COPY OF THE ANSWER ON THE ATTORNEY FOR THE PLAINTIFF (MORTGAGE COMPANY) AND FILING THE ANSWER WITH THE COURT. HELP FOR HOMEOWNERS IN FORECLOSURE New York State Law requires that we send you this notice about the foreclosure process. Please read it carefully. Summons and Complaint You are in danger of losing your home. If you fail to respond to the summons and complaint in this foreclosure action, you may lose your home. Please read the summons and complaint carefully. You should immediately contact an attorney or your local legal aid office to obtain advice on how to protect yourself. Sources of Information and Assistance The State encourages you to become informed about your options in foreclosure. In addition to seeking assistance from an attorney or legal aid office, there are government agencies and non-profit organizations that you may contact for information about possible options, including trying to work with your lender during this process. To locate an entity near you, you may call the toll-free helpline maintained by the New York State Department of Financial Services at 1-800-342-3736 or visit the Department's website at www.dfs.ny.gov. RIGHTS AND OBLIGATIONS YOU ARE NOT REQUIRED TO LEAVE YOUR HOME AT THIS TIME. You have the right to stay in your home during the foreclosure process. You are not required to leave your home unless and until your property is sold at auction pursuant to a judgment of foreclosure and sale. Regardless of whether you choose to remain in your home, YOU ARE REQUIRED TO TAKE CARE OF YOUR PROPERTY and pay property taxes in accordance with state and local law. Foreclosure rescue scams Be careful of people who approach you with offers to save your home. There are individuals who watch for notices of foreclosure actions in order to unfairly profit from a homeowner's distress. You should be extremely careful about any such promises and any suggestions that you pay them a fee or sign over your deed. State law requires anyone offering such services for profit to enter into a contract which fully describes the services they will perform and fees they will charge, and which prohibits them from taking any money from you until they have completed all such promised services. The foregoing Summons is served upon you by publication pursuant to an order of Hon. Thomas A. Adams, Justice of the Supreme Court of the State of New York, signed on the 31st day of October, 2017 in Mineola, New York and to be duly entered in the NASSAU County Clerk's Office, in Mineola, New York. The Nature of this action pertains to a note and mortgage held by Plaintiff on real property owned by the above named defendants as specified in the complaint filed in this action. The above named defendants have failed to comply with the terms and provisions of the said mortgage and said instruments secured by said mortgage, by failing and omitting to pay the balance due and owing, and the Plaintiff has commenced a foreclosure action. Plaintiff is seeking a judgment foreclosing its mortgage against the real property and premises which situate in the Village of Kings Point, Town of North Hempstead, County of Nassau and State of New York and is commonly known as 23 Martin Court, Kings Point, New York 11024 and all other relief as to the Court may seem just and equitable. DATED: November 13, 2017 SCHILLER, KNAPP, LEFKOWITZ & HERTZEL, LLP BY: WILLIAM B. SCHILLER, ESQ., Attorneys for Plaintiff 950 New Loudon Road Latham, New York 12110 Telephone: (518) 786-9069 50087-2

### Legal Notice # 21335845 OPEN CALL FOR PROJECT PROPOSALS

PLEASE TAKE NOTICE that the Town of Oyster Bay, State of New York are seeking proposals for transformational projects on private sites within the Downtown Hicksville area with respect to the award of: **HICKSVILLE DOWNTOWN REVITALIZATION INITIATIVE**  
The Hicksville Downtown Revitalization Initiative (DRI) is a \$10 million investment by New York State to help downtown Hicksville by advancing revitalization strategies and projects that returns the area to its "main street" character while improving upon opportunities for local business owners and new housing markets with an emphasis on walkability, open spaces, places to congregate and engaging commuters to view Hicksville as a destination and not merely a transit hub. The initiative incorporates a robust outreach process to build on the Hicksville downtown vision developed in previous plans. The goal of the DRI process is to identify key economic development opportunities and recommend projects for funding through the program. The Hicksville DRI Local Planning Committee (LPC) is seeking proposals for private projects which would leverage both private and DRI funding. Said proposals are to be received and stamped by the Department of Intergovernmental Affairs of the Town of Oyster Bay at Town Hall South, 977 Hicksville Road, Massapequa, NY 11758 not later than 11:00 a.m., prevailing time on December 29, 2017. Project Proposal Guidance documents are available at the Department of Intergovernmental Affairs of the Town of Oyster Bay at Town Hall South, 977 Hicksville Road, Massapequa, NY 11758, on or after December 8, 2017, between the hours 9:00 a.m. and 4:45 p.m., on regular business days, Monday through Friday. Dated: December 8, 2017, Oyster Bay, New York.

## THE PORT AUTHORITY OF NY & NJ

### NOTICE OF AVAILABILITY and REQUEST FOR COMMENT

#### Draft Environmental Assessment Aircraft Fuel Tank Installation John F. Kennedy International Airport, Queens, New York

In accordance with the National Environmental Policy Act of 1969 (NEPA) notice is hereby given that copies of a Draft Environmental Assessment (EA) for the proposed Aircraft Fuel Tank Installation Project at John F. Kennedy International Airport are available for public review and comment at the following locations:

The Port Authority of NY & NJ  
John F. Kennedy International Airport  
Building 14/PA Administration Building  
3rd Floor  
Jamaica, NY 11430  
Attn: Jim Steven  
Hours: 8:00 am to 4:00 pm

The Port Authority of NY & NJ  
Aviation Department  
4 World Trade Center/150 Greenwich Street  
18th Floor  
New York, NY 10007  
Attn: Kathryn Lamond  
Hours: 9:00 am to 5:00 pm

The Draft EA document for this project will be available at these locations until the close of the comment period, which is 30 days after the publication date of December 8th. In addition, a copy of this document may be viewed online at: <http://www.panynj.gov/about/studies-reports.html>

The Draft EA document responds to all of the requirements of the Federal Aviation Administration (FAA) for preparation of an Environmental Assessment (EA) pursuant to NEPA and also documents compliance with Federal Executive Orders 11988 and 13690: Floodplain Management. The Port Authority of New York & New Jersey (Port Authority) is inviting the public to submit, in writing, comments on the Draft EA prepared for the Aircraft Fuel Tank Installation Project. The Port Authority is accepting comments on this Draft EA document until the official comment period closes on January 8th. Comments must be received by 5:00 PM on January 8th in order to be considered.

All comments on this Draft EA should be sent to: The Port Authority of NY & NJ, 4 World Trade Center/150 Greenwich Street, 18th Floor, New York, NY 10007. Attn: Kathryn Lamond. In addition, comments may be emailed to [JFKEA@PANYNJ.GOV](mailto:JFKEA@PANYNJ.GOV) with the subject heading "FUEL TANK EA COMMENT." If you have any questions on this notice, please send an email to address above.

# 佔旺清場違禁制令 黃之鋒等押後判刑

## 李兆富為撰文道歉 葉劉斥「轉移視線」

【本報訊】新民主黨主席葉劉淑儀因批評領展而涉嫌遭獅子山學會創辦人、公共政策顧問兼專欄作家李兆富「恐嚇」事件，保安局局長李家超表示，警方已經接手調查。李兆富七日在電台再次否認自己有恐嚇含義，強調當天自己與新民主黨總裁袁彌昌，並沒有談及區議員辦事處的問題，他七日為早前撰文冒犯葉太一事道歉，但旋即被葉太批評其道歉是「轉移視線」，「根本與專欄無關」。袁彌昌則指李兆富當時是進行政治游說工作，他承認李兆富當時沒有說過「郁」、「搞佢啲區議員」等字眼，但語句中確實帶有警告和提醒的意思，希望葉劉淑儀「收手」。

葉劉淑儀、李兆富和袁彌昌三人就「領展恐嚇」一事在電台節目中「對質」。李兆富澄清指自己沒有預料會在上月十四日的論壇上見到袁彌昌，他當時只提到「你們主席(葉太)經常就領展問題發言，我們之後可以就房地產信託基金再討論，先不要驚動葉太。」就著會否逼遷區議員辦事處的問題，李兆富說自己可以幫助新民主黨就社區事務與領展總部聯絡，僅此而已，自己沒有談及區議員辦事處，自己亦「不知道新民主黨有沒有租用領展的場」。

他及後又就著自己在專欄向葉劉淑儀「抽水」一事，向葉劉淑儀道歉，說自己「後生仔唔識世界」。對於自己是領展「說客」的說法，李兆富指出自己是「理解多於傳話」，稱倘若自己進行游說，則不會借著葉太的文章「抽水」。

葉劉淑儀聽後旋即批評其道歉是「轉移視線」，直言事件「根本與專欄無關」，認為李不用就專欄道歉。她透露，袁彌昌在上月二十日的黨員大會後，慌張地向自己透露李兆富的說法。她表示，袁彌昌轉述時完全沒有提到專欄，但有提到領展會對新民主黨區議員不利。她認為，袁彌昌為人誠實，不會無中生有。對於李兆富想跟她談房託基金一事，她質疑李只是專欄作家，質疑其角色及和領展的關係。李兆富則反指，自己曾研究金發局激活房託市場的放棄政策，希望和袁彌昌討論而已。

袁彌昌則表示，相信李兆富當時是進行政治游說工作，而自己和他人則擔任傳話的角色。他承認，李兆富當時沒有說過「郁」、「搞佢啲區議員」等字眼，但語句中確實帶有警告和提醒的意思，希望葉劉淑儀「收手」。對於李有否提及領展會不續租鋪位予新民主黨區議員，袁彌昌說李「不用說得這麼明白」，直言對方當時「好圓滑」地告訴自己「葉太經常批評領展，領展別無選擇……領展有權把舖位租俾邊個」。袁彌昌認為茲事體大，牽涉到區議員和黨的關係，加上李明顯是找自己傳話，故決定把事件告訴葉太。

## 辯方求情稱無意挑戰法律

【本報訊】警方於二〇一四年清理旺角彌敦道佔領區時遭阻撓，二十人涉嫌違反法庭禁制令，被控刑事藐視法庭。十七日十六名認罪和被定罪的被告到達高等法院，當中包括香港眾志秘書長黃之鋒、學聯前副秘書長岑敖暉等人，辯方求情時提出為黃之鋒索取感化報告，並表示否認控罪的被告無意挑戰法律，行動期間亦無行使暴力，法官最後決定將案件押後判刑。

代表黃之鋒的資深大律師駱應淦表示，黃之鋒於案發時年僅十八歲，加上早前因重奪公民廣場案而被上訴庭改判監禁六個月，故望法庭判刑時可考慮刑罰整體性，或可判以感化令。法官陳慶偉問駱是否希望公民廣場一案有結果後才作判刑。駱表示無所謂。

駱又提到《刑事訴訟程序條例》第一〇九A條所指，法庭除非沒有其他適合方法處置年屆十六歲至未屆二十一歲犯罪者，否則不得判處監禁，駱稱將就條例再作陳詞。

資深大律師潘熙為不認罪的各被告求情時則指，他們並沒意圖挑戰法庭權威或法律。唯法官反駁指，僅部分被告沒有意圖挑戰法庭，但不同意全部均是。另外，潘為被告黃浩銘求情時亦

黃之鋒(前排左二)、岑敖暉(前排中)及黃浩銘(前排左四)等被告押後判刑。 關偉華攝

透露黃完成社會政策碩士學位後，現為社區組織者，關懷社會，並強調當日他嘗試呼籲群眾保持冷靜，行為和平，而且事件中沒有造成損傷，其心態是為求爭取公義。黃因另案於赤柱監獄服刑時撰寫六頁求情信，提到自己追求法治及民主社會的理念，又指當日禁制令無疑將「政治難題及壓力交給法庭」，他引用南非前總統曼德拉為反白人政府專政而被控罪的說話：「不管閣下在這

個法庭上決定給我甚麼罪，請你們放心，我將在刑滿後繼續前進，我將為消除那些不公平而奮力鬥爭，直到最後把這些不公平徹底消滅。」

案中十六名被告，包括已認罪的黃之鋒、岑敖暉、周蘊盛、朱緯國、張啓康、司徒子朗和蔡達誠，以及早前被裁定罪成的黃浩銘、朱佩欣、郭陽煜、趙志深、陳寶瑩、關兆宏、熊卓倫、馮啓禧和麥盈湘，而案發時蔡達誠年僅十七歲。

## 警司吳偉漢涉貪案 押後明年三月再訊

【本報訊】一名被指「反黑警司」的港島總區刑事總部警司吳偉漢(見圖)，涉嫌收賄包庇夜場及免費嫖妓，早前被廉署起訴他與兩名私人會所經營者共八項罪名，包括接受及提供免費嫖妓服務及七十八萬元賄款，以及串謀公職人員行為失當，使吳偉漢向該兩名經營者通風報信等，三人七日原於區域法院答辯，但押後至明年三月一日。另

外，辯方向法庭申請豁免索取控方文件的收費，但法官認為現時未有法律基礎下達該命令，故著雙方先行討論解決方法。

辯方申請豁免文件收費  
辯方指，因為有大量文件及閉路電視短片需要翻閱，包括數百頁的會計文件、二十九個錄影會面、銀行資料、多份專家報告及有關監視行動詳情的資料等，而且部分文件仍未從廉署收到，而廉署亦尚未確認何時能將文件交予辯方，故申請押後答辯。

另外，辯方向法庭申請豁免索取未經控方使用文件的收費，但控方指由於廉署與香港律師會有協議可就索取未使用文件收費，並指這為慣常做法。法官指此申請未見任何法律依據，控方亦暫未能提供協議內容資料，故著雙方先行討論解決方法，若雙方未能就事項達成共識，才通知法庭作處理。

三名被告為五十三歲警司吳偉漢，兩名私人會所MB Club Mont.Busa及Golden的負責人四十六歲葉其祥及三十七歲謝凱健。

## 1100萬元黃金闖港 司機過關閃縮被查

【本報訊】中東亂局持續，朝鮮半島波譎雲詭，黃金價格隨時炒上，加上內地黃金價格較香港低，私梟大舉偷運黃金到港以圖搵快錢。香港深圳灣海關管制站人員，六日截查一輛內地到港的私家車，在車尾箱內起出三十五塊走私黃金，共值一千一百萬元，拘捕司機調查。此次已為兩周內截獲第二宗同類案件，現正追緝涉案主腦。三十一歲司機涉利用私家車走私千一萬元黃金到港就逮，已遭海關人員通宵扣查。海關指出，該名男子六日駕駛私家車經深圳灣口岸

進入香港，關員發現司機行動閃縮，接受查問時語言迴避，認為可疑遂徹底搜查，終在車尾行李箱內，檢出三十五塊各重一公斤黃金，合共三十五公斤，值一千一百萬元。

可判囚七年罰款200萬  
由於司機未能提供出口黃金准許批文，亦無入口報關文件，海關員相信黃金屬走私貨品，於2是將司機扣查，並相信仍有走私集團主腦在逃。根據《進出口條例》，輸入或輸出未列艙單貨物，最高可判入獄七年及罰款二百萬元。

上月二十三日，海關文錦渡管制站人員，亦在截查一輛入境中型貨車時，在車內一個腰包檢出十塊各重一公斤黃金，共重十公斤，值三百三十萬元，並拘捕四十三歲司機調查。

消息稱，近期北韓頻頻試射導彈，令區內局勢升溫，加上中東受美國影響出現亂局，預期金價會上升，但內地對黃金管制嚴格，大量買賣要獲得批文，而攜帶五十克以上黃金進出境，須向海關申報及提交黃金出處文件，不法之徒覬準內地黃金每公斤價格比香港低約一至二千元，將黃金大量走私到港，除賺取差價外，更可待金價上升時迅速脫手獲利。

海關在深圳灣一輛到港私家車車尾廂，搜獲三十五條金條。

#### NOTICE OF AVAILABILITY and REQUEST FOR COMMENT

##### Draft Environmental Assessment

##### Aircraft Fuel Tank Installation

##### John F. Kennedy International Airport, Queens, New York

In accordance with the National Environmental Policy Act of 1969 (NEPA) notice is hereby given that copies of a Draft Environmental Assessment (EA) for the proposed Aircraft Fuel Tank Installation Project at John F. Kennedy International Airport are available for public review and comment at the following locations:

The Port Authority of NY & NJ John F. Kennedy International Airport Building 14/ PA Administration Building 3rd Floor Jamaica, NY 11430 Attn: Jim Steven Hours: 8:00 am to 4:00 pm	The Port Authority of NY & NJ Aviation Department 4 World Trade Center/150 Greenwich Street 18th Floor New York, NY 10007 Attn: Kathryn Lamond Hours: 9:00 am to 5:00 pm
--	--

The Draft EA document for this project will be available at these locations until the close of the comment period, which is 30 days after the publication date of December 8th. In addition, a copy of this document may be viewed online at: <http://www.panynj.gov/about/studies-reports.html>

The Draft EA document responds to all of the requirements of the Federal Aviation Administration (FAA) for preparation of an Environmental Assessment (EA) pursuant to NEPA and also documents compliance with Federal Executive Orders 11988 and 13690: Floodplain Management. The Port Authority of New York & New Jersey (Port Authority) is inviting the public to submit, in writing, comments on the Draft EA prepared for the Aircraft Fuel Tank Installation Project. The Port Authority is accepting comments on this Draft EA document until the official comment period closes on January 8th. Comments must be received by 5:00 PM on January 8th in order to be considered.

All comments on this Draft EA should be sent to: The Port Authority of NY & NJ, 4 World Trade Center/150 Greenwich Street, 18th Floor, New York, NY 10007, Attn: Kathryn Lamond. In addition, comments may be emailed to [JFKEA@PANYNJ.GOV](mailto:JFKEA@PANYNJ.GOV) with the subject heading "FUEL TANK EA COMMENT." If you have any questions on this notice, please send an email to address above.

## Rallying for Ros

Dear Editor:

Re Ryan Brady's report "Gettin' the new face of AD 27," Dec. 7 editions:

I'm delighted that new Assembly Rosenthal represents our community. His predecessor, Michael Siman, tough act to follow, but Daniel has up to the task. A Kew Gardens High School graduate of Lander College honed his skills as Councilman Rosenthal's aide and district director for several years. He led opposition to dedicated bus lanes on 10th Street, pushed the Department of Transportation to complete the VHS Library and increased sanitation services.

I spoke to him a few times before he met him for the first time at Mayor's Nov. 30 Briarwood Town Hall meeting. He has been helpful, candid and a strong advocate for his constituents. I'm also impressed by his youth. At 26, he's the youngest member of the New York State's Legislature. He brings a fresh perspective and breath of fresh air to an industry reeling from the stench of former political leaders.

But we differ on one issue — pricing. He echoes his former boss, Daniel Laneman, by opposing tolls on bridges. This gives an unfair advantage to those who pay nothing to use the Queensboro Bridge while mass transit riders pay to take the subway into Manhattan. One of all bridge tolls is fading. Gov. Cuomo called them a "nonstarter," now they are a gun their necessity. I hope that Rosenthal will change his position when he takes office in January.

## Save swans from rip

Dear Editor:

Re "Report Leads Some To Rip Plan," Dec. 7, multiple editions:

The New York State Department of Environmental Conservation's third Mute Swan Management Plan has finally been adopted. The third strike was delivered by a comprehensive study titled "Assessing the Ecological Effects of Mute Swan Exotic Northeastern North America," which found the absence of scientific evidence reviewed analysis in the DEC's just released decade-long mute swan control plan and TV

The DEC's first draft plan in January called for the complete elimination of mute swans by 2025; it would be revised in March 2015 targeted at free-flying swans upstate only, but let's fining all downstate swans to "control high fings" via wing mutilation. The DEC now wants the heads of "less than are now annually" upstate for six consecutive years. Casually, the DEC notes that more than 200 swans were killed statewide from 2005 to 2010, but following a frenzy in Atlantic Flycatchers, the massive culling of wildlife by the DEC is without an environmental impact statement (as required in New York by current Environmental Quality Review Act, which is a rip-off!

We were named one of the Best 101 Places to Take Your Family..

**GOP GUN BILL 'UNDERMINES SENSIBLE STATE GUN-SAFETY LAWS':** House Democratic Caucus Chair Joe Crowley (D-NY) issued the following statement after the House approved a Republican bill that would force a universal concealed carry law on Americans:

"Today, Republicans in Congress failed to protect Americans and reduce the horror and heart-break of gun violence.

"This NRA-approved bill is far from a responsible approach to prevent gun violence in our communities. Instead, it will undermine sensible state gun-safety laws by allowing dangerous and violent individuals to secretly carry powerful firearms like those used in the Orlando and Las Vegas mass shootings.

"American families want to feel safe and secure in our churches, our schools, our communities, and our homes. Democrats won't rest until it becomes a reality."

**MALONEY SLAMS CONCEALED CARRY RECIPROCALITY ACT:** After the passage of H.R. 38, Concealed Carry Reciprocity Act, Congress Member Carolyn B. Maloney (NY-12), released the following statement:

"We have a gun violence epidemic in this country and it is glaringly obvious to anyone paying attention that our pathetically weak federal gun

safety laws need major improvements. Yet instead of standing up to the NRA and working to actually make our country safer, House Republicans today passed the Concealed Carry Reciprocity Act, a bill strongly opposed by law enforcement organizations across the nation because it will put more lives at risk.

"Under this bill, someone who couldn't get a concealed carry permit in New York would all of sudden be able to carry a concealed gun in New York City, as long as they have a permit from another state. New York has some of the most effective gun safety laws in the country. But, our efforts to keep our residents safe from gun violence would be eviscerated by this bill, which would put everyone at the mercy of the weakest gun laws in the country. It's far past time for Congress to stand up to the NRA and enact sensible gun safety laws, not tear them down."

Maloney spoke on the floor against this bill during debate.

**GOVERNMENT FUNDING BILL 'INADEQUATE':** House Democratic Caucus Chair Joe Crowley (D-NY) issued the following statement after the House voted for a continuing resolution "that doesn't address the country's most pressing needs":

"I am opposed to the Republicans' continuing resolution. It fails to provide thousands of children with access to health care or lift up our teetering economy. It leaves DREAMers without the stability and safety they deserve and fails to invest in transportation and infrastructure.

Crowley added: "Republicans control the House, Senate, and the White House. Yet, they have failed to pass any meaningful legislation to help hard-working Americans. Their lack of vision for how to strengthen America and improve the lives of those trying to make ends meet have

brought us today to the brink of a government shut-down. Republicans will clearly need Democrats to avoid disaster. We have made clear our votes will require an investment in our priorities."

**MALONEY LEADS 44 COLLEAGUES IN URGING APPROPRIATIONS COMMITTEE TO PROPERLY FUND 2020 CENSUS:** Congress Member Carolyn B. Maloney (NY-12), sponsor of the 2020 Census Investment Act, sent a letter with 44 of her colleagues to the House Committee on Appropriations Chair Rodney P. Frelinghuysen and Ranking Member Nita Lowey urging the committee to ensure that the Census Bureau receives the funds it needs to produce an accurate, constitutionally mandated decennial census in 2020.

In their request, the members explain that an accurate Census is of vital importance because it "helps to determine the allocation of hundreds of billions of dollars in annual federal funding, business investment decisions, as well as representation at all levels of government."

Maloney added that "FY2018 is a critical year of preparation for a successful 2020 Census. During this year, the Census Bureau must make final design decisions for and begin to execute the 2018 End-to-End Census Test. This comprehensive test will be evaluated as a 'dress rehearsal' for the 2020 decennial Census, designed to test the readiness of key data technologies, internet response methods, outreach and promotional operations, as well as the management and response process. Unfortunately, due to historic underfunding, the 2018 test has already been scaled back significantly. Operational testing will take place at just one urban site in Providence, RI. The bureau had to cancel testing planned for sites in rural or suburban communities. This has introduced unprecedented risk to successfully modernize the Census in 2020

and has put numerous populations at risk of not being accurately counted."

**CROWLEY: DELAY TRUMP IMPEACHMENT HEARINGS:** House Democratic Caucus Chair Joe Crowley (D-NY) issued the following statement on the House vote to begin impeachment proceedings against President Trump:

"I am one of many Americans that's disappointed in the direction President Trump has taken our country, and I have grave concerns about his leadership, his policies, and his judgement.

"That is why I was one of the first members of Congress to call for the appointment of a special counsel to investigate. I strongly believe that what the American people want is the facts and, therefore, we should let Special Counsel Mueller and his team complete their task. For these reasons, I do not think today is the right time for a vote of impeachment."

**CROWLEY BLASTS TRUMP'S DECISION TO SHRINK OUR NATIONAL PARKS:** House Democratic Caucus Chair Joe Crowley (D-NY) released the following statement after President Trump announced plans to reduce the size of the Bears Ears and Grand Staircase-Escalante National Monuments by a combined two million acres:

"Americans have a right to access our nation's public lands – pristine areas that inspire awe and, in the case of Bears Ears and Grand Staircase-Escalante, hold significant meaning for Native Americans. This reckless decision by President Trump is an assault on our national monuments and sacred sites on behalf of big oil and gas corporations. It trades the rights of future generations in order to satisfy Republican donors. This is unacceptable."

**500K US WOMEN HAVE OR ARE AT RISK OF GENITAL MUTILATION:** The

# Your short-term visa

## Expert Advice

On August 1, the Department of State (DOS) revised its Foreign Affairs Manual (FAM) and expanded the previous "30/60 day" rule to a 90-day threshold.

Previously, the rule was that if a person who entered on a non-immigrant visa, like a visitor visa or visa waiver, filed for permanent residence within 30 days of entry, there was an irrebuttable presumption that they committed fraud/misrepresentation.

If the person filed within 30-60 days of entry, there was a rebuttable presumption of fraud, which the applicant had the burden of proving otherwise. If after 60 days, there was no legal presumption, although Immigration would still be able to ask questions as to the applicant's intentions when entering.

Dev Banad Viswanath is an attorney with Banad Law Office.

In order to find an alien inadmissible, it must be determined that there has been a misrepresentation made by the applicant; the misrepresentation was willfully made; the fact misrepresented is material; and the alien by using fraud or misrepresentation seeks to procure, has sought to procure, or has procured a visa, other documentation, admission into the United States, or other benefit provided under the INA.

Under the new rule a presumption of willful misrepresentation is established "if an alien violates or engaged in conduct inconsistent with his or her nonimmigrant status within 90 days of entry."

Examples of "conduct that violates or is otherwise inconsistent with an alien's nonimmigrant status" for purposes of applying the 90-day rule include engaging in unauthorized employment, enrolling in a course of academic study, marrying a United States citizen or lawful permanent resident, or undertaking any other activity for which a change of status or an

adjustment of status would be required.

If any of these actions occur within 90 days of entry, a consular officer "may presume that the applicant's representations about engaging in only status-compliant activity were willful misrepresentations of his or her intention in seeking a visa or entry."

The new rule applies the same "reasonable belief" standard to inconsistent activities that occur after 90 days of entry to determine if the alien misrepresented him or herself.

Under the prior rule, if a status violation or inconsistent activity occurred after 60 days of entry than the Department of State did not solely consider that activity as conduct to constitute inadmissibility.

However, under the new rule there is no limit on when an inconsistent activity or status violation occurring after 90 days will give rise to "reasonable belief" that the alien misrepresented his or her intent.

The policy manual directs USCIS officers that "as long as there is a reasonable evidentiary basis to conclude that a person is inadmissible for fraud or willful misrepresentation, and the applicant has not overcome that reasonable basis with evidence, the officer should find the applicant inadmissible."

Granting that USCIS has not yet updated its Policy Manual to reflect the change to the 90-day rule, applicants for USCIS benefits should be mindful that they may be asked to present evidence to explain any misrepresentation concerns that USCIS may have.

# Bag fee disclosure scrapped

The U.S. Department of Transportation (DOT) cancelled an Obama-era provision that requires airlines to disclose the cost of added checked bag fees when purchasing an airplane ticket.

"The out-of-thin-air decision to scrap this consumer protection proposal is nothing more than a Christmas gift to the airlines who will now rake in even more profit," said Senator Charles Schumer.

The DOT also withdrew a proposal that would have required airlines to make public how much profit they make off of baggage fees and other ancillary revenues, arguing that the reporting process is too costly.

According to media reports, airlines raked in over \$7 billion in checked bag fees in 2016, a revenue that continues to climb each year on average.

Police suspect this man of stealing phones and a wallet from an N train rider last month and then using the victim's credit card at a Brooklyn McDonald's. NYPD

## Straphanger robbed aboard N train: NYPD

ASTORIA — An N train rider in Astoria discovered his cell phones and wallet were missing last month, police said.

The 21-year-old man was heading northbound at the Ditmars Avenue/Astoria Street subway station Nov. 23 at 4 a.m. when he realized he had been robbed and alerted the NYPD.

During an investigation, police determined the victim's credit card was

used at a McDonald's located at 1133 Eastern Parkway in Brooklyn later that same morning, according to the NYPD. The victim's phones were valued at \$1,990, police said.

The suspect is described as a black man in his 20s, last seen wearing a gray hooded jacket and blue jeans. Anyone with information is asked to call the NYPD's Crime Stoppers Hotline at 1-800-577-TIPS.

## Man stabbed to death in St. Albans

ST. ALBANS — Police identified a suspect Monday who was wanted in connection with the stabbing death of a 29-year-old man in St. Albans Sunday night.

Jaleel Glanville was charged with murder, manslaughter, and criminal possession of a weapon, according to authorities.

Glanville, who lives at 188-35 Jordan Ave., allegedly stabbed a 29-year-

old man to death at 188-30 Jordan Ave, according to police.

When police arrived on the scene, the victim had been stabbed in his left forearm, right hand and left leg, authorities said.

EMS brought the victim to Queens General Hospital, where he was pronounced dead.

Police were still trying to determine the identity of the victim.

## Man found stabbed to death in Elmhurst

ELMHURST — Police responding to a 911 call of an unconscious man in Elmhurst Tuesday morning discovered a 25-year-old man inside a dwelling on 80th Street near 45th Avenue unconscious and unresponsive with multiple stab wounds to the torso, police said. EMS arrived and pronounced

the man dead at the scene, according to the NYPD.

The victim was identified as David Alejandro Gonzalez, a resident of 80th Street near Baxter Avenue in Elmhurst, police said.

There are no arrests and the investigation is ongoing.

# POLICE BLOTTER

## 102nd Precinct

**GRAND LARCENY** — Police said that they are searching for two suspects wanted in connection with a grand larceny incident on Nov. 13 in Kew Gardens.

Around 4:15 a.m., the suspects entered a 7-Eleven convenience store, located at 81-64 Lefferts Blvd., and one of them acted as a look-out, while the other individual removed a bin of cigarettes totaling \$3,000 from behind the counter. Both individuals fled the location and no injuries were reported during the incident.

Both suspects were described as black men with dark complexions who are believed to be 19 to 25 years of age. One suspect was last seen wearing a black shirt, while the other was wearing a black hoodie and black coat.

## 104th Precinct

**BURGLARY** — Police are asking for the public's assistance in local several individuals who are wanted in connection with a burglary that occurred on Nov. 22 in Middle Village.

Shortly before 3 a.m., one of the suspects forcibly opened the door to a grocery store, located at 74-12 Metropolitan Ave., while the second suspect entered the location and removed \$5,150 in cash.

## 109th Precinct

**GRAND LARCENY** — Police said that they are searching for an individual wanted in connection with a grand larceny incident on Nov. 6 at Flushings's Main Street subway station.

Shortly before 1 p.m., a 25-year-old woman was sitting aboard a northbound 7 train when it entered the Main Street station. When the train stopped, an unidentified man approached her and removed her phone from her hands. The suspect then fled the train car in an unknown direction.

The individual has been described as a five-foot-10-inch Hispanic man who is believed to be 25 years old and weighs approximately 160 pounds. He was last seen wearing all dark clothing and a pink backpack.

## 111th Precinct

**BURGLARY** — A 26-year-old Brooklyn man has been convicted in an attempted burglary in July 2016 in Bayside during which he was caught on video surveillance, the Queens district attorney said.

Fabio E. Abreu, who lives on Loring Avenue in Brooklyn, was arrested the day after the failed burglary when a 911 caller—who had seen a photograph still of the burglar that the homeowner had posted on social media—made a reporter that he saw the wanted suspect in a nearby park.

Abreu was convicted on Dec. 6 on

second-degree attempted burglary and third-degree criminal trespass charges before Queens Supreme Court Justice Gene Lopez, who will sentence the defendant on Jan. 9. The defendant faces up to seven years in prison.

According to trial testimony, Abreu was observed on video jumping over a locked fence of a residence on 223rd Street in Bayside on July 24, 2016 and entering the backyard. While in the yard, the defendant tried to open windows and doors in an attempt to gain entry into the residence. While at the backdoor, Abreu noticed the surveillance cameras and, in an attempt to cover his tracks, went to the front door, which is equipped with a Ring.com doorbell camera. When Abreu approached the front door, he triggered the Ring.com app, which captured his face on camera before he fled.

A photograph of Abreu's face from the app was then posted by the homeowner on a community Facebook page.

## 114th Precinct

**GRAND LARCENY** — Police said that they are searching for an individual who is wanted in connection with a grand larceny incident in Astoria on Dec. 6.

**This man is being sought in a grand larceny.**

Around 4:30 p.m., an unidentified man entered the American Specialty Pharmacy, located at 26-20 Hoyt Ave., and asked the clerk for assistance. When the clerk came out from

behind the counter to help the suspect find an eye-care product, the man removed the victim's wallet from his pants.

The suspect removed cash from the wallet and placed it back into the victim's pocket before fleeing the store. The suspect is described as a five-foot-seven-inch black man who weighs approximately 150 pounds and was last seen wearing all camouflage.
