

## **OPERATION SAFE COMMERCE**

Operation Safe Commerce (OSC, is a federally funded program that will conduct vulnerability assessments of sample supply chains and serve as a test-bed for new business processes and security technologies to increase the security of container shipments -- from the point of origin throughout the supply chain to the point of destination. The ports of Los Angeles/Long Beach, New York/New Jersey and Tacoma/Seattle -- the nation's top three major load centers -- will work with private and public entities to identify supply chain vulnerabilities and develop improved methods and technologies to ensure the security of cargo entering and leaving the United States.

Those technologies and processes that prove successful and cost efficient under the OSC initiative will then be recommended for implementation throughout the maritime industry.

### **OSC-Public Version**

If you are a technology vendor or supply chain stakeholder and have questions about OSC, please contact Beth Rooney at 212-435-4215 or [berooney@panynj.gov](mailto:berooney@panynj.gov).
