

# Final steel beam going up at 4 World Trade Center

NEW YORK — The final steel beam is going up at Four World Trade Center.

Developer Larry Silverstein is expected to join construction workers at a ceremony on Monday to mark the milestone for the building at the corner of Liberty and Greenwich streets.

A group of workers are scheduled to sign the beam before it is hoisted to the top of 4 WTC.

Silverstein's company also owns the already completed Seven World Trade Center.

At the anchor building of the site, One World Trade Center, steel has been erected to the 104th floor.
